How to use this guide

This guide turns the Brand Guidelines into a buildable app. It covers every route in the web app, what each screen looks like and does, and the tokens and components to build it with. The mockups are rendered from the same CSS you get in the kit, so what you see is what the code makes.

Six rules

1. **Tokens, never hex**
   Every colour, size, radius and shadow comes from `tokens.css`. If a value is missing, add a token. Don't type a hex code in a component.

2. **One attribute switches the mode**
   `<html data-mode="customer|trade|office">`. Green for customers, orange for tradies, forest/mint for the office. Components never check the role themselves.

3. **Mobile first, 390 is the source**
   Build at 390px to match the original Figma. Then widen to tablet and desktop using the layout rules. Never shrink the 390 design to fit 320. Let it reflow.

4. **Customers never see the machinery**
   No estimates, averages or margins in customer screens. They see three things: post it, accept the price, someone local sorts it.

5. **The server owns the numbers**
   Prices, earnings, GST and statuses come from the server. The UI shows them and never recalculates them.

6. **Every state, every time**
   Each screen needs loading, empty, error and success states, plus a working keyboard and screen reader. A screen isn't done until all of them are.

What decides what

1. **Brand Guidelines (PDF)**
   Logo, colour, type, voice. The top authority.

2. **This guide + kit**
   Screens, tokens, components, behaviour. Wins over old docs in /docs.

3. **Original Figma WurSo76mY67lO23D4Zlu7v**
   Exact 390px geometry for screens that existed in 2022.

4. **BUSINESS_PLAN.md**
   How a job works. If a screen and the plan disagree, ask Matt.

What's in the kit

`tokens.css`	Drop-in replacement for src/styles/brand.css. All tokens + modes.
`components.css`	Reference CSS for every component. Port into your components.
`screens.html`	All 54 screens as live HTML. Open it in a browser and inspect.
`FRONTEND_SPEC.md`	This guide as text, for AI agents and code review.

> **How to read screen pages:** each screen shows its route, a phone mockup and numbered build notes. Prices, names and numbers are examples, not rules.

01 — THE PRODUCT

Three people, one job

Every screen belongs to one of three modes. The mode decides the colours and the navigation; the job itself is shared. Each person only sees their slice: the customer never sees estimates, the tradie never sees the customer's price, and the office sees everything.

GREEN · DATA-MODE=CUSTOMER

Customer

1. **Post it**
   Describe it, add photos. Free.
2. **Accept the price**
   One fixed price. Saying no is free.
3. **Pay**
   Up front, before anyone turns up.
4. **Approve extras**
   Only if the tradie finds more.
5. **Sign off & rate**
   Or it auto-completes after 48 h.

ORANGE · DATA-MODE=TRADE

Tradie

1. **Estimate blind**
   Hours + materials. Private.
2. **Claim**
   First in. See what you earn first.
3. **Do the work**
   Message, materials via Telfer job no.
4. **Ask for extras**
   Photos → priced → customer OK.
5. **Finish & get paid**
   CoC/evidence → sign-off → payroll.

FOREST/MINT · DATA-MODE=OFFICE

Office (TM)

1. **Price jobs**
   From the blind estimates.
2. **Price extras**
   Variations from tradies.
3. **Check tradies**
   Licences, per trade.
4. **Handle problems**
   Cancellations, disputes, unclaimed.
5. **Pay tradies**
   Payroll export, mark paid.

Any kind of labour, not just sparkies. Main categories: Electrical, Plumbing, Gas fitting, Construction, plus **Other**, which can be anything (moving, cleaning, gardening, handyman, assembly...). Electrical runs end to end today; other categories can be posted and priced while claiming and completion switch on as each one's rules are set. Every screen is built so a new category only changes labels and evidence fields, not layouts.

Job states

The database has one status per job. Each mode shows it differently: customers see plain words, tradies see their next move, and the office sees its queue. Use the single `<StatusPill>` component with a kind: waiting, action, good, done, alert or info.

SERVER STATUS	CUSTOMER SEES	TRADIE SEES	OFFICE QUEUE
REVIEW	Getting your price	Needs an estimate	To price
PRICED	Price ready	(hidden)	Waiting on customer
BOOKABLE	Booked	Ready to claim	Unclaimed (alert > 48 h)
ASSIGNED	Tradie confirmed	On now / Message customer	In progress
ASSIGNED + variation	Needs your OK	Waiting on approval	Price extra work
SUBMITTED	Please check	Waiting sign-off	Sign-off (auto 48 h)
COMPLETED	Sorted	Done · Queued / Paid	Payroll
CANCEL_REVIEW	Cancel requested	On hold	Cancellation (alert)
CANCELLED	Cancelled	(hidden)	Closed

Pill kinds

Waiting	We're on it. Nothing for you to do.
Action	You need to do something. Signature colour.
Good	Going well / verified / paid.
Done	Finished. Forest.
Alert	Problem or overdue.
Info	Neutral fact.

Payments: **Pending · Paid · Refunded**. Variations: **Requested → Priced → Approved / Declined**. Payroll: **Queued → Paid**. Map each into the same pill kinds.

Sitemap

Every route in the app, grouped by who uses it. Routes follow the existing Next.js app where they exist; new routes are marked “new”. Full-screen flows (post a job, estimate, pay, finish job) hide the bottom nav.

ANYONE

Public

- **Landing**
  `/`

- **Payouts**
  `/admin/payouts`
- **Settings**
  `/admin/settings`

02 — SITEMAP

Navigation

Mobile keeps the original 5-icon bottom bar (64px + safe area, icons 26px, no labels; each has an aria-label). Same five slots in both modes, so muscle memory carries over. At ≥1024px the bar becomes a Forest top nav.

MODE	SLOT 1	SLOT 2	SLOT 3	SLOT 4	SLOT 5
CUSTOMER	Home	Search	My jobs	Messages	Account
TRADIE	Home (job board)	Search / all jobs	My work	Messages	Account + earnings
OFFICE	Queues	All jobs	Tradies	Payouts	Settings

Home headers

Forest band (menu · search · action) with a white title. Category tiles straddle the band edge. Used on Home, Browse, Account and success screens.

Inner screens

White app bar 56px: back · title (+ small subtitle) · one action. Sticky, header shadow 5%.

Full-screen flows

Post a job, estimate, extra work, finish job, pay: close (×) instead of back, no bottom nav, primary button pinned 34px from the bottom.

Office

Desktop sidebar 240px in Forest with Mint active state. Under 1024px it collapses into a top bar + menu sheet.

Behaviour: active tab = filled icon + 3px action-colour bar on top. Tapping the active tab scrolls to top. Unread badges are Danger red with white numbers. Back always returns to the previous screen with its scroll and filters intact (keep filters in the URL). Deep links from notifications open the exact job or thread.

Colour tokens

Raw brand colours sit at the bottom. Components only use the semantic and mode tokens on top, so switching mode is one attribute. Text colours are picked to pass WCAG AA on white.

Typography

One self-hosted variable font, Roboto Flex, under two names. **Trade Display** (weight 900, width 151, opsz 28) is the web stand-in for SF Pro Expanded Bold. **Trade UI** (normal width) handles everything else. Sizes come from the original 390px app. Never ship SF Pro on the web.

STYLE	EXAMPLE	TOKEN	SIZE / LINE HEIGHT	FONT	USE
Display	**Sorted in a flash.**	`--trade-fs-display`	64px · 4rem / 1.05	Display 900/151	Splash, landing hero (80 on desktop)
Title	**Welcome Back**	`--trade-fs-title`	36px · 2.25rem / 1.1	Display 900/151	Screen titles, auth
Price	**$372.00**	`--trade-fs-price`	28px · 1.75rem / 1.1	Display 900/151 · tabular	Prices, earnings, KPIs
Heading	**Suggested Jobs**	`--trade-fs-heading`	24px · 1.5rem / 1.15	Display 900/151	Section headings, sheet titles
Subheading	**Jack Wilson**	`--trade-fs-subheading`	20px · 1.25rem / 1.2	Display 900/151	Names, sub-sections
Section	**Recently Viewed**	`--trade-fs-section`	18px · 1.125rem / 1.2	Display 900/151	Section labels
Label	**3.6km away**	`--trade-fs-label`	15px · 0.9375rem / 1.2	Display 900/151	Tile overlays, status
Body	Need someone to check my wires	`--trade-fs-body`	16px · 1rem / 1.45	UI 400	Paragraphs, inputs (never < 16 on inputs)
Small	See all · Forgot password?	`--trade-fs-small`	14px · 0.875rem / 1.4	UI 400 / 700	Meta, links, buttons
Caption	Windsor, Invercargill · 2h ago	`--trade-fs-caption`	12px · 0.75rem / 1.35	UI 400	Captions (web min 12)

```
.tm-heading { font-family: var(--trade-font-heading); font-weight: 900; font-variation-settings: var(--trade-display-axes); /* 'wdth' 151, 'opsz' 28 */ }
/* Chrome needs the width axis set explicitly: font-stretch alone drops it. Tracking 0. Headings Forest. Numbers in prices: font-variant-numeric: tabular-nums. */
```

Space, shape & layout

A 4px spacing scale, with the original screen insets kept as named tokens. Mobile is a single column at 390px. Larger screens add columns and space, never bigger components.

Spacing (4px base)

`--trade-space-1`	4px
`--trade-space-2`	8px
`--trade-space-3`	12px
`--trade-space-4`	16px
`--trade-space-5`	20px
`--trade-space-6`	24px
`--trade-space-8`	32px
`--trade-space-10`	40px
`--trade-space-12`	48px
`--trade-space-16`	64px

> Source insets: browse/lists **16px**, auth & forms **36px** (20 on long forms), category gap **12px**, photo grid gap **6px**.

Shape & depth

5px `--trade-radius-job-tile`	Photo tiles, thumbs
11px `--trade-radius-action / -card`	Buttons, cards, tiles
22px `--trade-radius-sheet`	Sheets, detail sheet
Pill `--trade-radius-pill`	Chips, status, filter
Card shadow `0 4 4 / 25%`	Cards, category tiles
Action shadow `0 4 4 / 10%`	Hero CTA
Pop shadow `0 12 32 / 18%`	Menus, toasts

Breakpoints

sm	`< 600`	Phone. 1 column, bottom nav, 390 geometry. Must reflow cleanly at 320.
md	`600–1023`	Tablet. 2-col grids, content max 720 centred, bottom nav.
lg	`≥ 1024`	Desktop. Forest top nav, 12-col grid, 24 gutters, max 1200.
xl	`≥ 1440`	Same as lg with more margin. Never stretch past 1200.

Sizes

Tap target	44 × 44 min
Button / hero	55 / 61 high
Field	48 high
Bottom nav	64 + safe area
App bar	56
Category tile	159 × 162
Photo tile	187 high, 2 per row

Phone · 1 col · 16 inset

Tablet · 2 col · 24 inset · max 720

Desktop · 12 col · 24 gutter · max 1200

Icons on the web

SF Symbols are licensed for Apple platforms only, so the web uses **Material Symbols Rounded** (Apache 2.0), self-hosted. It's the closest rounded match. The current prototype uses the original SF glyph outlines in the bottom nav under a temporary OK; replace them with these before launch.

Home `home` iOS: `house.fill`	**Search** `search` iOS: `magnifyingglass`	**Jobs** `wallet` iOS: `stacked card *`	**Messages** `chat_bubble` iOS: `bubble *`	**Account** `person` iOS: `person`	**Menu** `menu` iOS: `line.3.horizontal`	**Post a job** `add_box` iOS: `plus.square.fill`
Save `bookmark` iOS: `bookmark`	**Notifications** `notifications` iOS: `bell.fill`	**Back** `arrow_back` iOS: `chevron.left`	**Close** `close` iOS: `xmark`	**Filter** `tune` iOS: `slider.horizontal.3`	**Sort** `swap_vert` iOS: `arrow.up.arrow.down`	**Estimate** `edit_square` iOS: `square.and.pencil`
Add photo `photo_camera` iOS: `camera`	**Location** `near_me` iOS: `location.circle`	**Email** `mail` iOS: `envelope`	**Password** `lock` iOS: `lock`	**Show password** `visibility` iOS: `eye`	**Valid** `check` iOS: `checkmark`	**Rating** `star` iOS: `star.fill`
Verified `verified` iOS: `checkmark.seal`	**Call** `call` iOS: `phone`	**Receipt** `receipt_long` iOS: `doc.text`	**Payments** `payments` iOS: `banknote`	**Help** `help` iOS: `questionmark.circle`	**Offline** `wifi_off` iOS: `wifi.slash`	**Share** `ios_share` iOS: `square.and.arrow.up`

Settings

Weight 400, grade 0, optical size 24. Outline by default; **filled** for the active nav tab, saved bookmark, rating stars, notifications bell and status icons.

Sizes

26 nav · 24 default · 20 inline with text and inside fields · 16 in chips/pills. Colour inherits from text (currentColor). Inside a 44px hit area.

Accessibility

Icons are decorative (`aria-hidden`). Icon-only buttons need an `aria-label`. Never use an icon alone for a status: pair it with words.

```
// npm i material-symbols   →  copy material-symbols-rounded.woff2 to /public/fonts/material-symbols/
<span className="tm-icon" aria-hidden>bookmark</span>          // outline
<span className="tm-icon tm-icon--fill" aria-hidden>bookmark</span>  // filled (saved)
// Keep emoji out of the UI (the current ⚡🔧🔥🔨 category icons go). Category tiles use the 3D illustrations.
```

Buttons

One <Button> with variants. Labels on coloured fills are Forest (the approved contrast fix). Full width on mobile, auto width on desktop. Press = scale .98. Focus = 2px blue ring with 2px offset.

3

Rules: the whole card is one link (no nested buttons except Save). Text in tiles is clamped to 3 lines; titles in rows to 1 line with ellipsis. Missing photo = Forest placeholder with the bolt, same size. Prices use tabular numbers and always say if GST is included. Trade tiles show what the tradie *earns*, never the customer price.

Feedback, overlays & progress

Feedback is always in words, never colour alone. Use a banner for things that stay true, a toast for things that just happened, and a sheet for decisions that need full attention.

Banner · brand tip

Turn the power off before getting close to anything electrical.

Banner · info

These are payroll records. Marking paid doesn't move money.

Banner · success

Paid. We're finding someone local.

Banner · alert

Card declined. Try another card or bank transfer.

Banner · test mode (until real payments)

Test mode. No real money moves.

Toast · 4s · bottom, above nav · with Undo

Saved. Undo

Progress tracker · done / now / to do

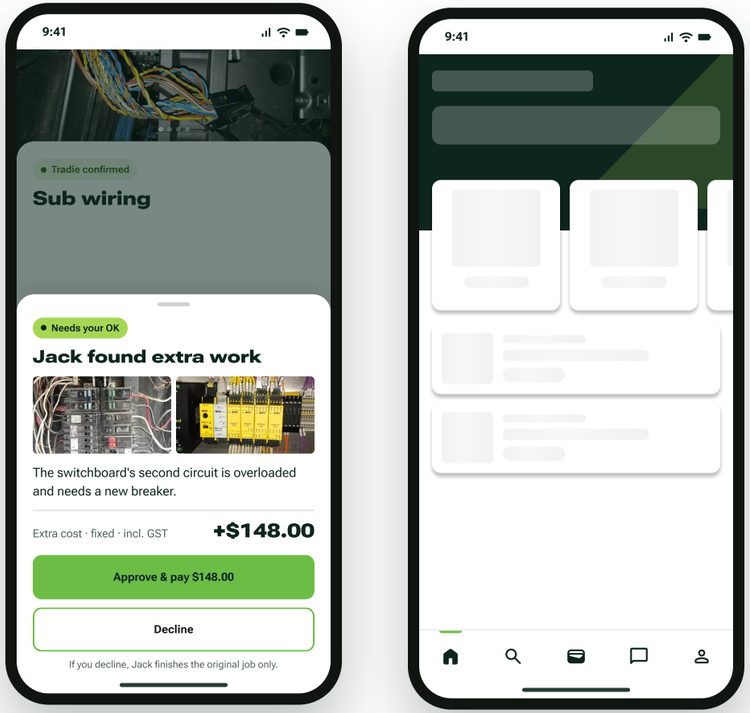

- **Posted**
- **Price accepted**
  $372.00 paid
- **Tradie on the way**
  Finding someone local
- Sorted

Message bubbles

Can I come Thursday at 8?

Perfect, see you then.

Bottom sheet over a screen · and skeleton loading

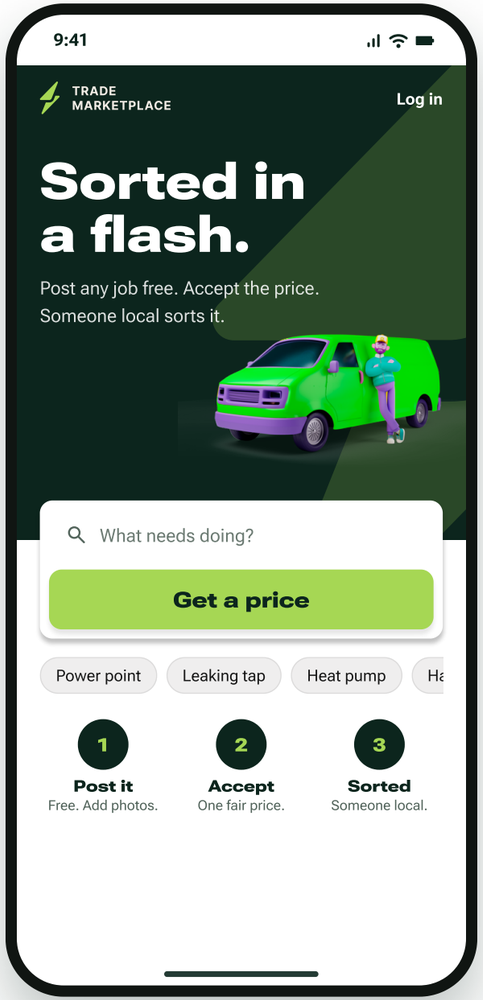

Sheets: 22px top radius, grab handle, Forest scrim 55%, focus trapped inside, Escape and swipe-down close them, focus returns to what opened it. **Dialogs** only for destructive confirms (cancel job, mark batch paid). **Live regions:** toasts and inline status use `role="status"`; errors use `role="alert"`.

Landing, log in & sign up

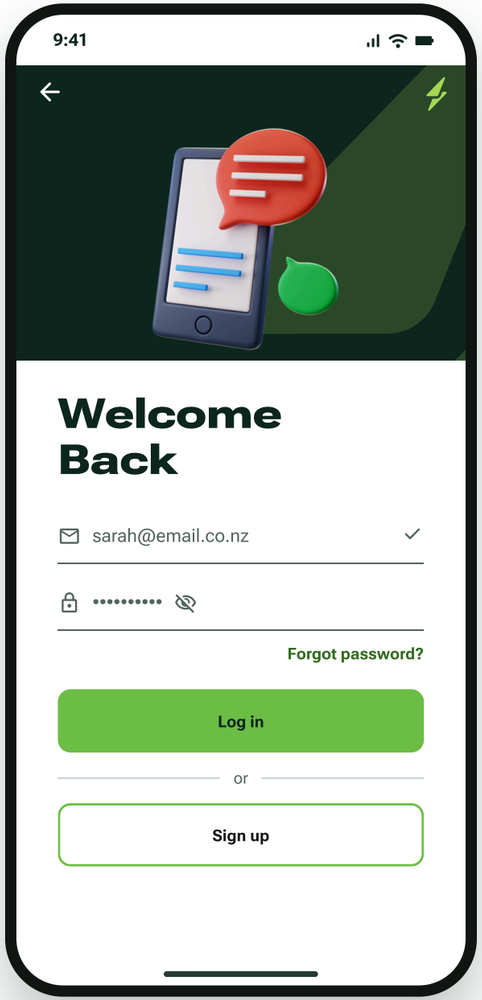

The front door. One question (“What needs doing?”) before any sign-up. Log-in and sign-up match the original 2022 Figma frames.

Landing `/`

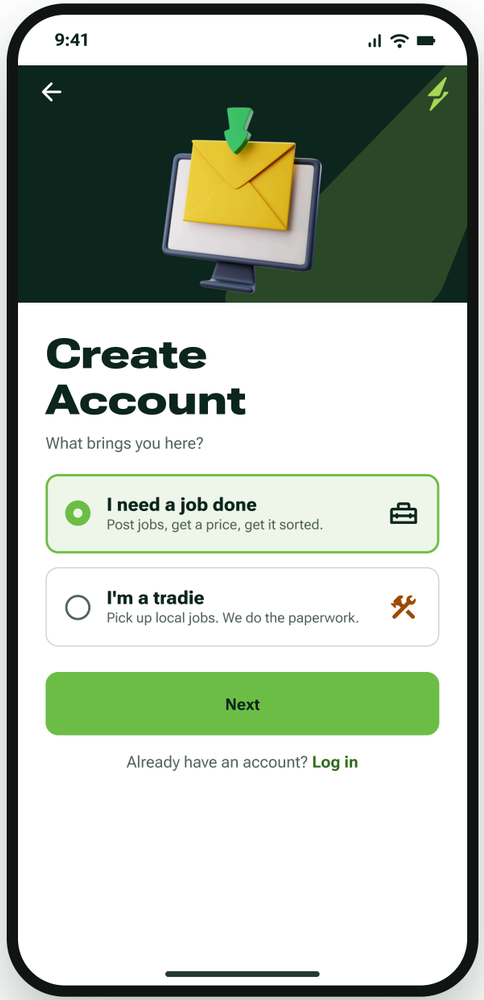

1. One obvious action: “What needs doing?” Typing or tapping Get a price opens Post a job step 1 with the text carried over (no sign-up wall first).
2. Popular chips pre-fill the job text.
3. 3 steps only. Never explain estimates or how pricing works to customers.
4. Top-right Log in. A “For tradies” link sits in the footer and the menu (Hi-Vis).
5. Desktop version: see Desktop pages.

Log in `/login`

1. Matches original Figma node 7:8 (390×844). Fields are underline style, border #52645B.
2. Email gets a valid tick (action colour) only after format check.
3. Errors: inline under the field + keep what was typed. Message: “That email and password don’t match.”
4. After log-in: set data-mode from role, then go to the user’s Home.
5. Mode-neutral (customer green) because we don’t know the role yet.

Sign up · who are you? `/signup`

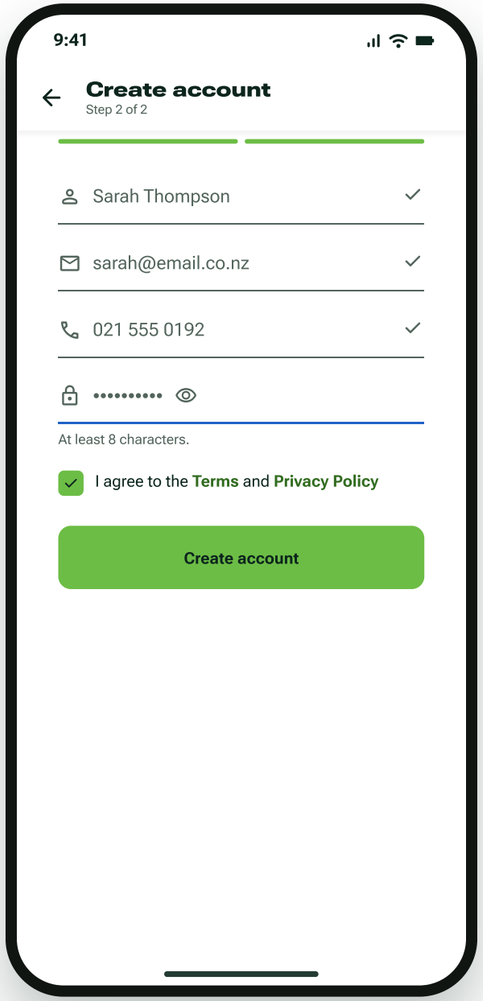

1. Step 1 of sign-up. One choice, then Next. Choosing “I’m a tradie” switches the rest of sign-up to trade mode (orange).
2. Selected choice card: 2px action border + tint fill. Whole card is the hit area (role="radio").
3. Existing /signup has these steps already; this is the target look.

Sign-up details & password reset

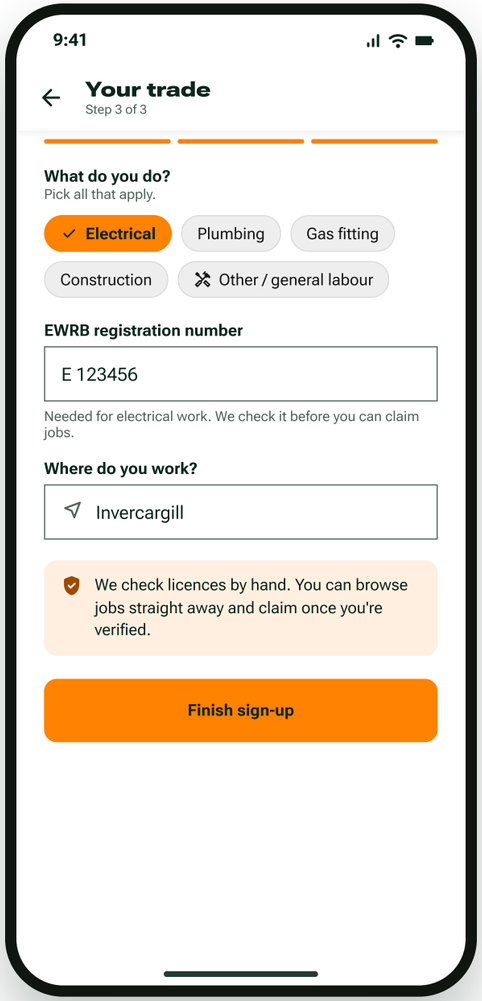

Customers give the minimum. Tradies add their trade, licence and area. Once someone picks "I'm a tradie", the flow turns orange.

Sign up · your details `/signup?step=2`

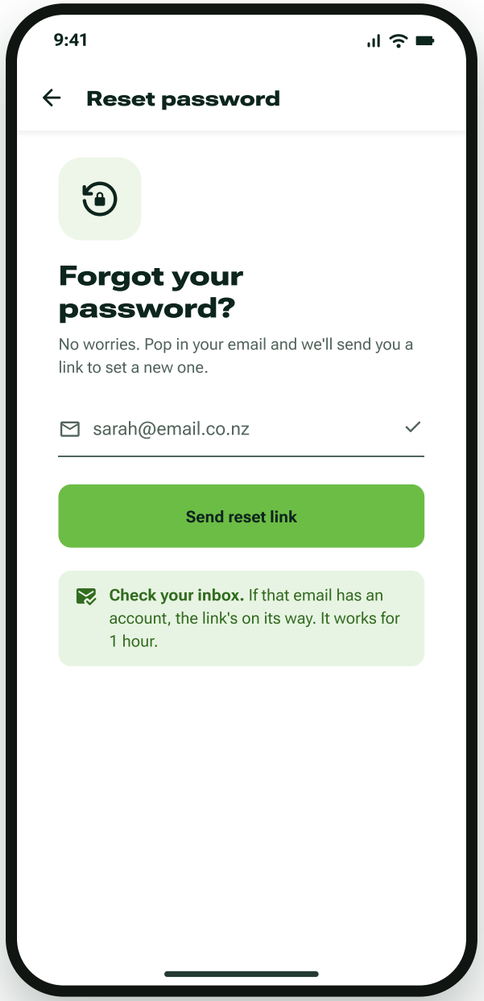

1. Original "Create Account" layout. Field order: name, email, mobile, password.
2. Focused field: 2px focus-blue underline. Show/hide password toggle.
3. Region is NOT asked here for customers: we take the address when they post a job.
4. On success: customer lands on Home with a welcome toast "You're in. What needs doing?".

Sign up · tradie details `/signup?step=trade`

1. Trade mode from here on (Hi-Vis actions, Amber signature, #9E4A00 links).
2. Trade list comes from the CATEGORIES constant: main trades + Other (general labour). Licence field label + requiredness change per trade (EWRB for electrical); Other needs no licence, ID check instead.
3. Never imply a tradie is verified for a trade until the office checks it.

Forgot password `/recovery`

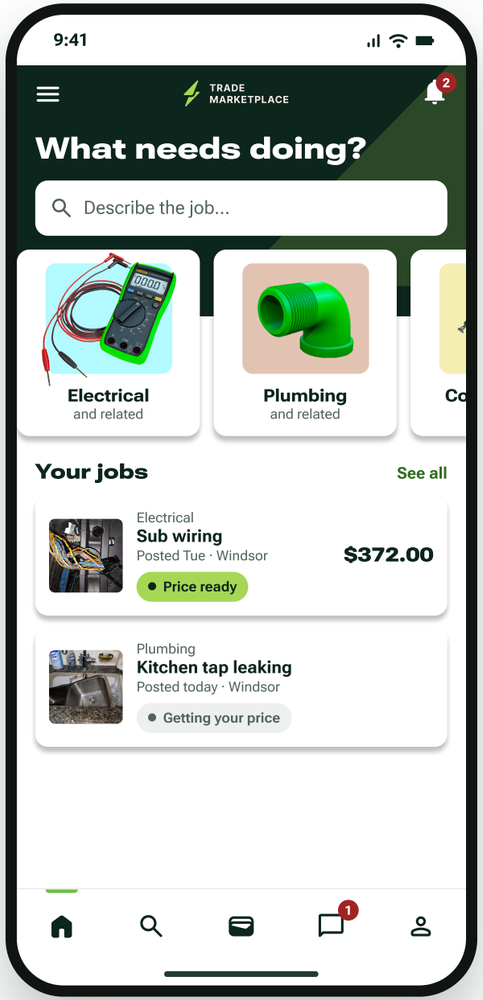

1. States (already prototyped at /recovery): request → sent → expired → reset → complete.
2. Sent message never confirms whether an account exists (security).
3. Resend has a 60s cooldown shown on the button: "Resend in 0:42".

Home & posting a job

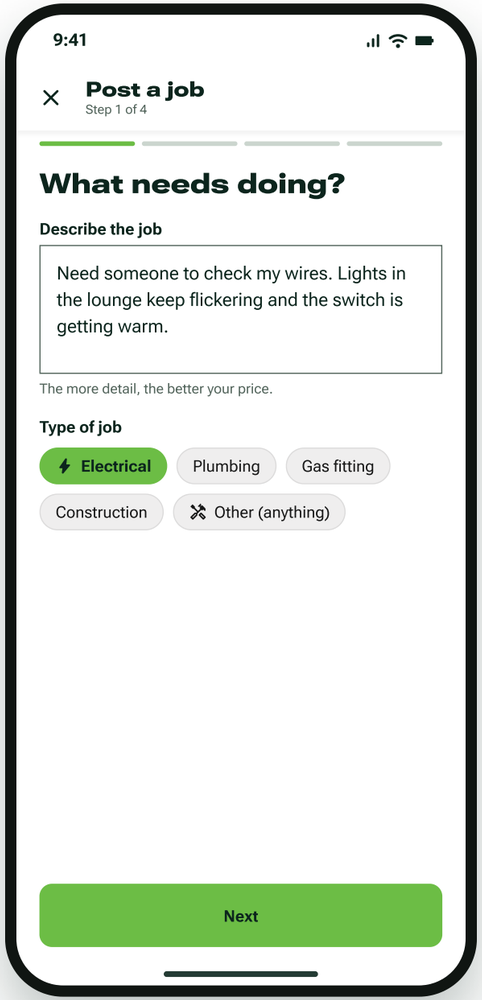

The customer app is three steps dressed as one: post it, accept the price, sorted. Posting is a 4-step full-screen flow with a draft that survives refreshes.

Home `/ (signed in)`

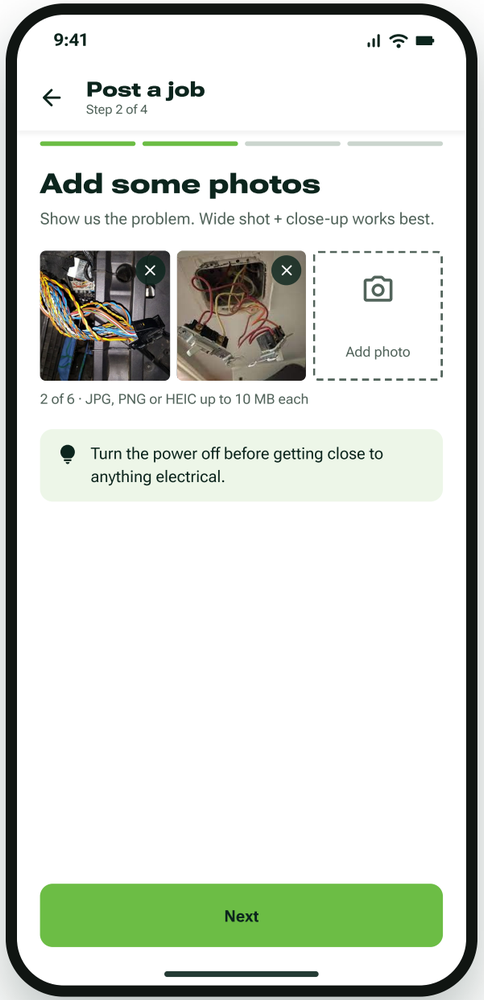

1. Customer Home. Forest band opens the screen; category tiles straddle its edge (brand device).
2. Search box = start a job. It opens Post a job with the text filled in. Category tiles also start a job with that type picked.
3. "Your jobs" shows only jobs that need attention first (Price ready, Tradie found, Done – please confirm). Hidden when the customer has no jobs.
4. Status pill colours: see Job states page. Action-needed pills use the signature colour.
5. Bell → Notifications. Badge counts unread.

Post a job · 1 What `/jobs/new`

1. Full-screen flow, no bottom nav. Close (×) asks "Leave this job? We'll keep your draft for 24 hours."
2. Description: required, 10–1000 chars, counter appears at 900.
3. Type: pre-picked if they came from a category tile. Other = any kind of labour (moving, cleaning, gardening, assembly...); "not sure" goes there too and the office re-types it.
4. Draft saves to sessionStorage on every change (existing behaviour, keep it).
5. Next is always enabled; on tap, invalid fields show inline errors and focus the first one.

Post a job · 2 Photos `/jobs/new`

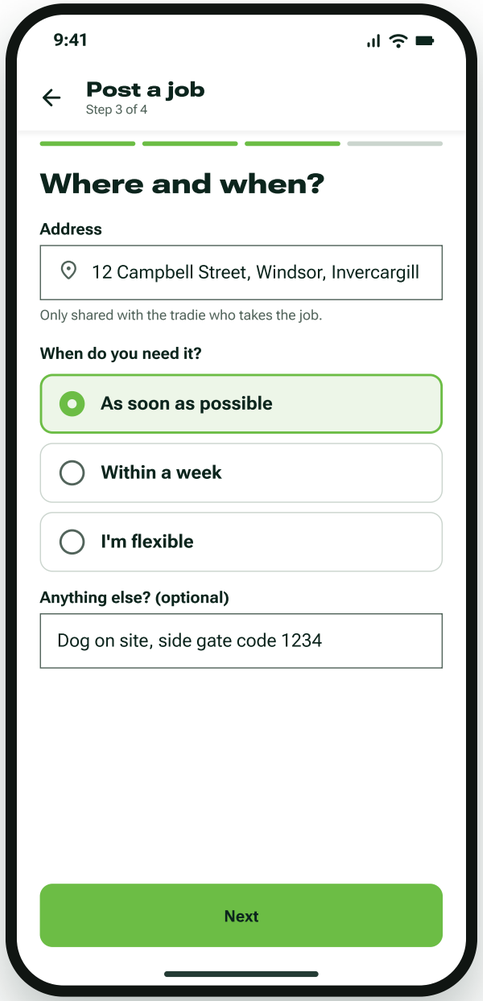

1. At least 1 photo required, max 6. Add tile opens the camera/library (input type=file accept=image/* capture).
2. Thumbnails: 5px radius, × removes (with undo toast). Uploads start immediately with a progress ring on the tile.
3. Failed upload: tile turns red-outlined with "Retry".
4. Safety tip changes by job type (electrical/gas).

Posting a job (continued)

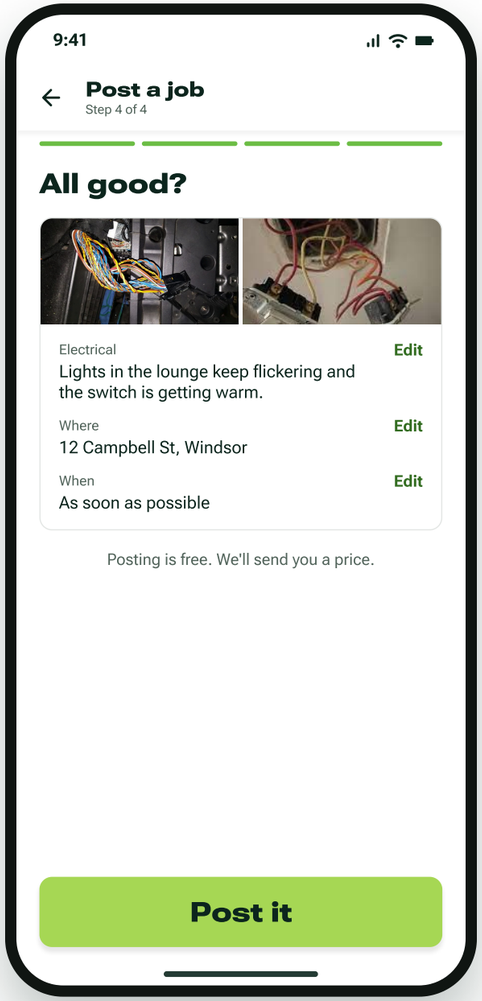

Where and when, a check page, then a celebration. The tracker on the Posted screen follows the customer through the whole job.

Post a job · 3 Where & when `/jobs/new`

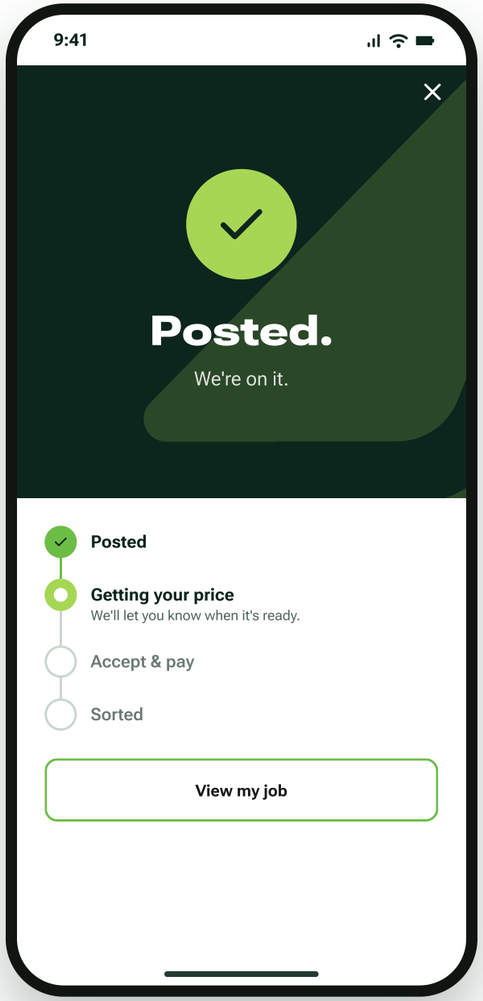

1. Address: NZ address autocomplete (NZ Post / LINZ). Suburb + region are stored separately for search and distance.
2. Privacy: tradies see suburb only until they take the job. Say so under the field.
3. Timing options map to a single field. No calendar booking yet (not built).

Post a job · 4 Check & post `/jobs/new`

1. Review before submit. Every section has Edit (jumps back to that step, keeps everything).
2. Hero CTA (signature colour, Display type) only for the one big moment of a flow.
3. Loading: button shows spinner, all inputs disabled. Never double-submit.
4. Signed-out user: tapping Post it opens a sign-up sheet, then posts automatically. Their draft is never lost.

Posted `/jobs/[id]?posted=1`

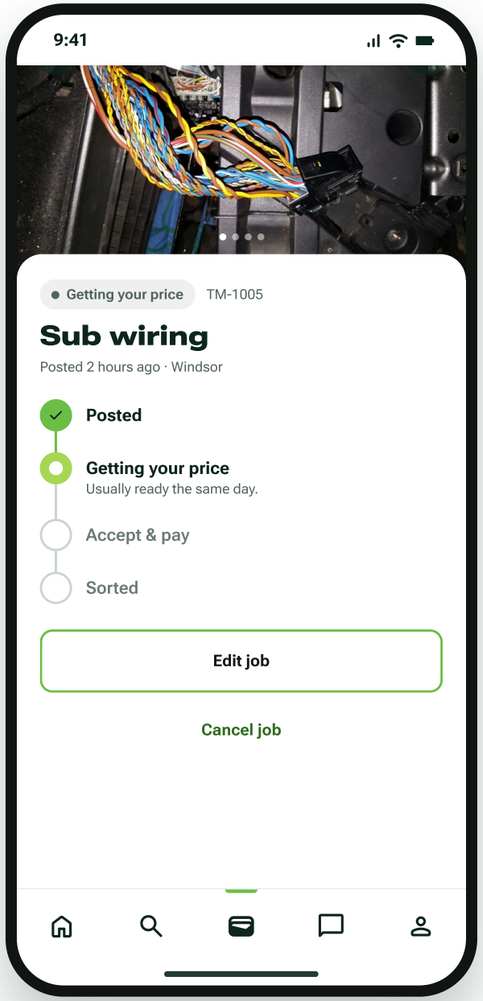

1. Success moment. The check pops in with a short scale + bolt flash (motion page). Reduced motion: no animation.
2. Tracker = the customer's whole journey in 4 words. Same tracker appears on the job page.
3. Push/email permission ask can go here ("Get a ping when your price is ready?"). Ask once only.

Getting the price

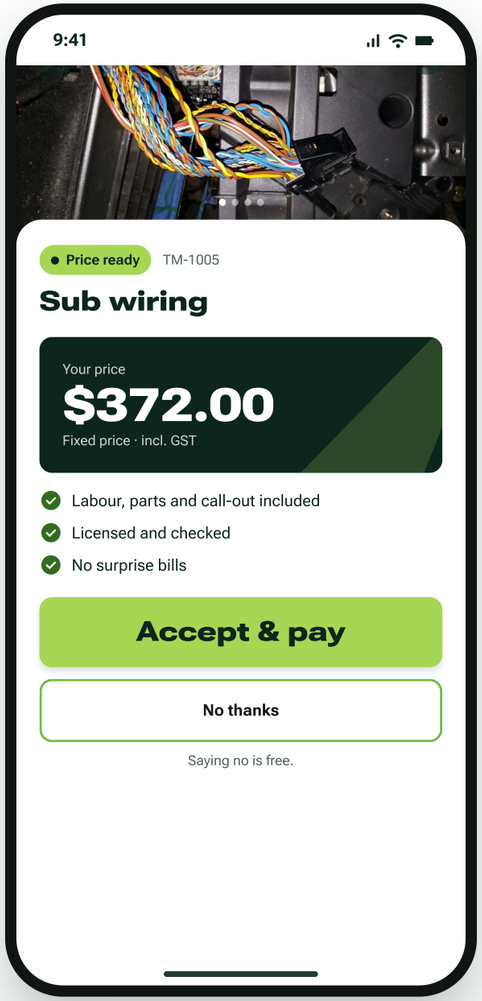

One job page that changes with the status. The price-ready state is the most important screen in the app: one big number, three reassurances and one big button.

Job · getting your price `/jobs/[id] · REVIEW`

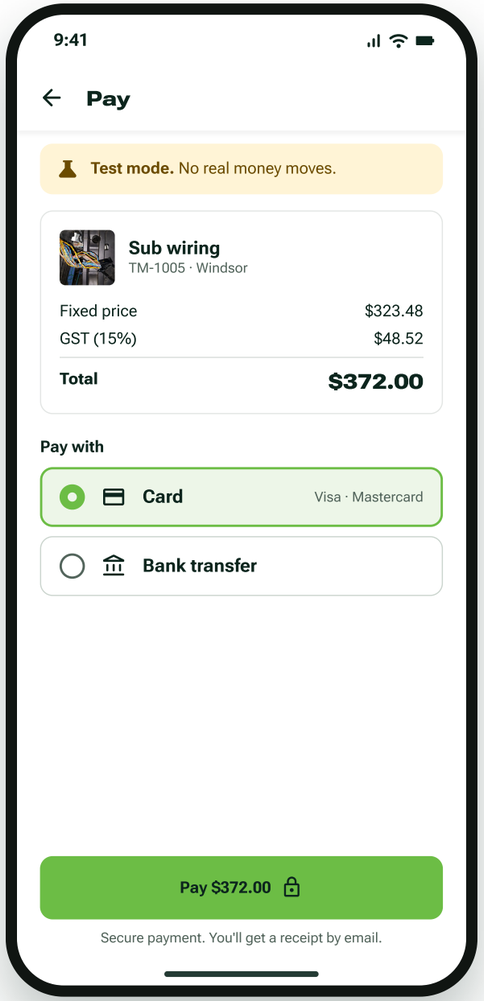

1. Job page layout (all states): photo header (swipe gallery, tap to zoom) + white sheet with 22px top radius.
2. Status pill + tracker always at the top. One main action per state.
3. Waiting state: customer can still edit or cancel for free. Copy never mentions estimates or how the price is made.
4. If pricing takes > 24h, add banner: "Still working on it. Thanks for your patience."

Job · price ready `/jobs/[id] · PRICED`

1. THE moment. Big price in a Forest block, 3 reassurance ticks, hero CTA.
2. Accept & pay → Pay screen. No thanks → sheet: "No worries. Want to tell us why?" (optional reasons) → job closed, free.
3. Price is the saved fixed total from the server. Never recalculate on the client.
4. "Licensed and checked" wording changes per trade (e.g. "Licensed electrician · CoC included" for electrical).

Pay `/pay/[paymentId]`

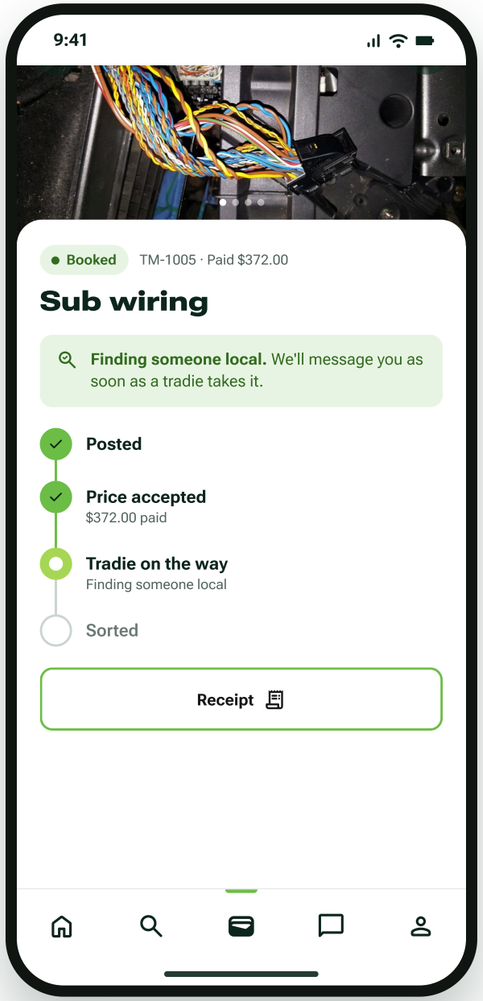

1. Existing test checkout. Keep the TEST banner until real payments are switched on (both founders sign off).
2. Card form will be the payment provider's hosted fields (Stripe/Windcave). Style its inputs with our field tokens.
3. Errors: card declined → banner alert at top, keep the method selected, button re-enabled.
4. Success → back to the job page in "Booked" state with a toast "Paid. You're booked."

Getting it done

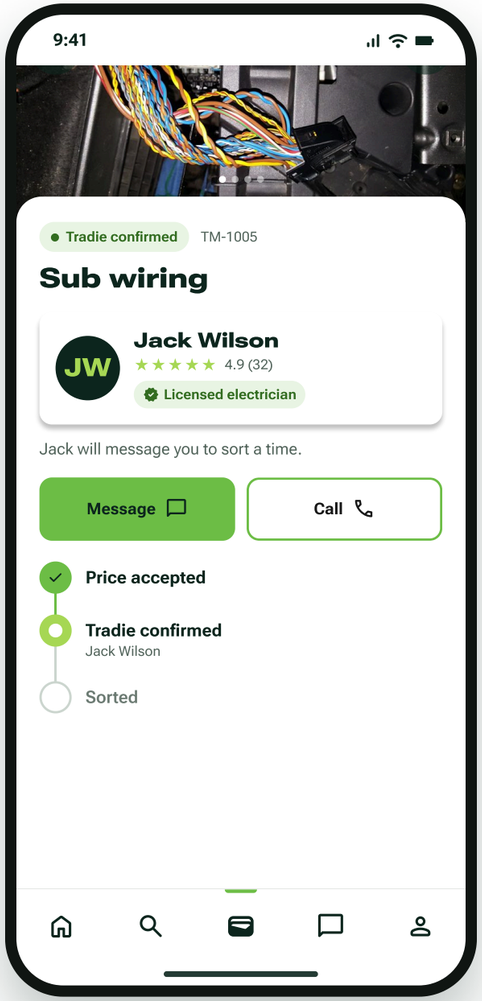

After paying, the customer mostly waits. Tell them so, introduce their tradie, and ask permission (with photos) before any extra cost.

Job · booked `/jobs/[id] · BOOKABLE`

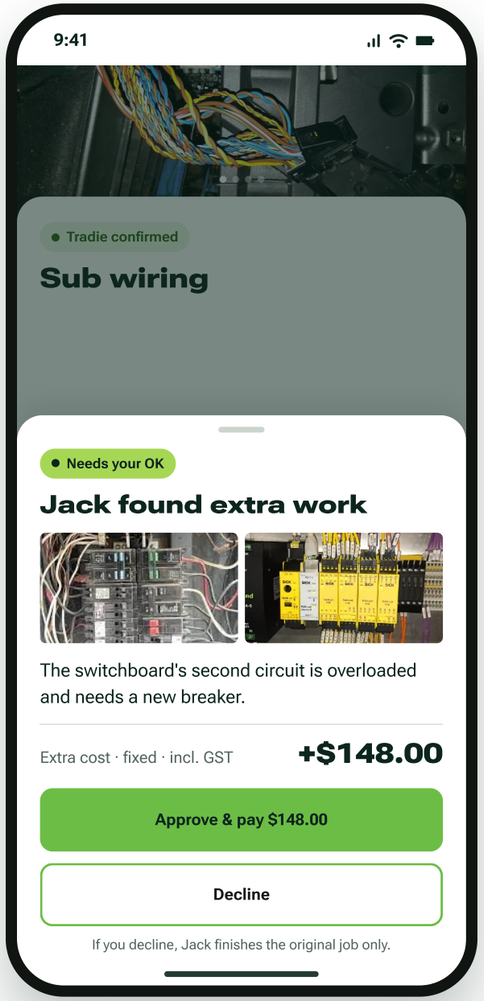

1. Paid, waiting for a tradie to claim. Customer has nothing to do: say so.
2. Cancel after paying = "Request to cancel" in the ··· menu → CANCEL_REVIEW (office checks before any refund).
3. If nobody claims in 48h, office gets an alert (not shown to customer).

Job · tradie confirmed `/jobs/[id] · ASSIGNED`

1. Assigned. Tradie card links to their public profile.
2. Call button only if the tradie shares their number (setting). Message is always there.
3. Tracker can collapse earlier steps once there are more than 4.

Extra work to approve `/jobs/[id] · variation`

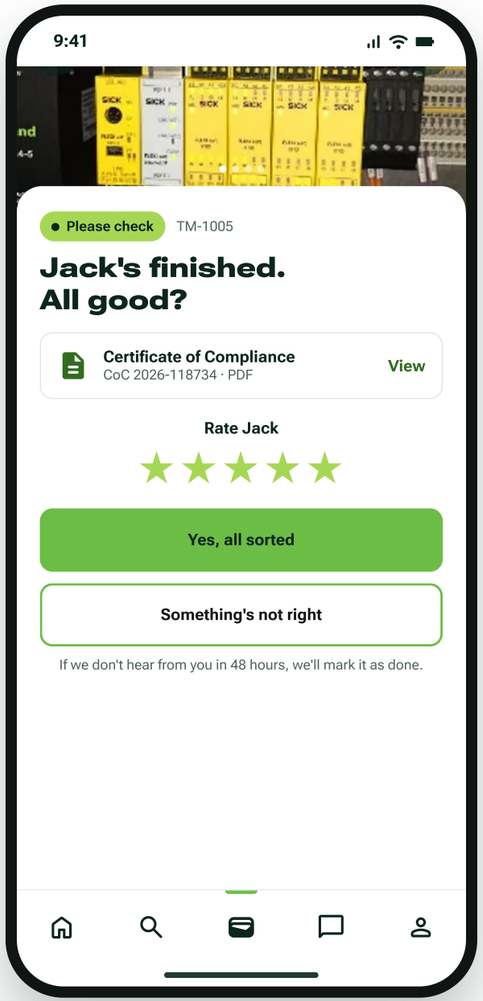

1. Variation approval as a bottom sheet over the job page. Also arrives as a push notification + message thread card.
2. Approve → same Pay flow for the extra amount. Decline → confirm sheet, then the tradie is told.
3. Photos are required from the tradie for every extra (business rule: "no surprise bills").

Sign-off, my jobs & receipts

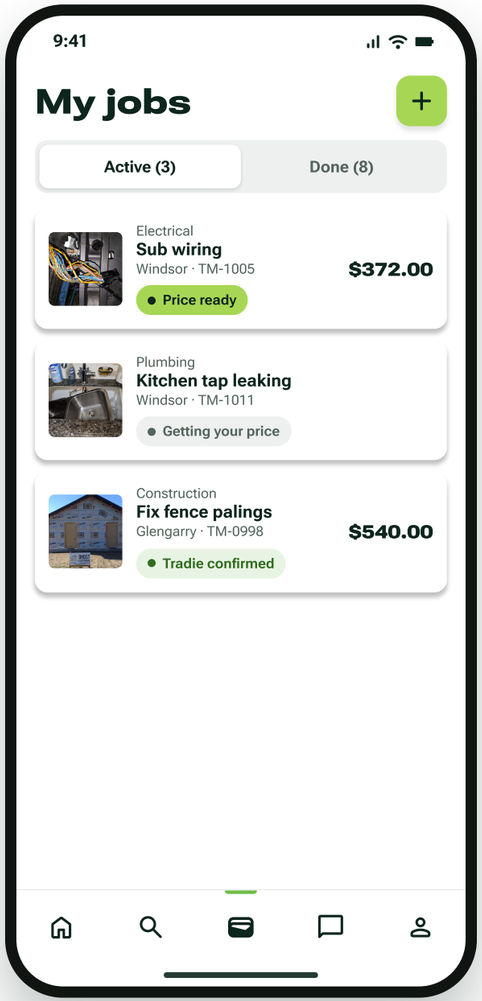

Close the loop: check the work, rate the tradie, keep the receipt.

Job done · confirm & rate `/jobs/[id] · SUBMITTED`

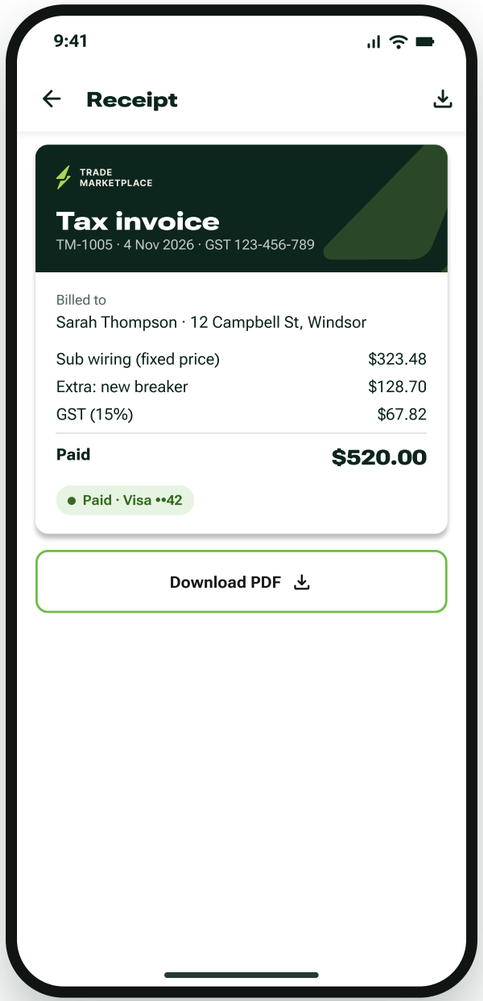

1. Sign-off. CoC shown for electrical; other trades show their completion evidence (photos).
2. Stars optional here, required for the review later. Comment field appears after tapping a star.
3. "Something's not right" → short form to the office (pauses the 48h auto-release).
4. After sign-off: "Sorted." celebration (bolt flash) + receipt link.

My jobs `/dashboard`

1. Customer "Jobs" tab. Segmented Active / Done.
2. Sort: jobs needing action first, then newest.
3. Row tap → job page. Price shows once known.
4. Empty state: see System states page.

Receipt `/receipts/[jobId]`

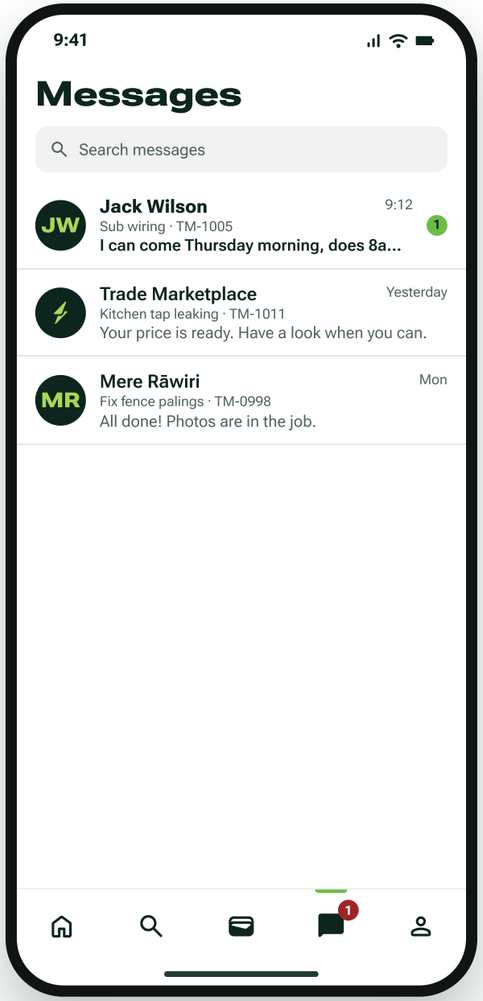

1. GST-compliant tax invoice (TM GST number, date, description, GST shown).
2. Refunds show as their own negative line with date.
3. Download → PDF in the receipt style (Forest header).

Messages & notifications

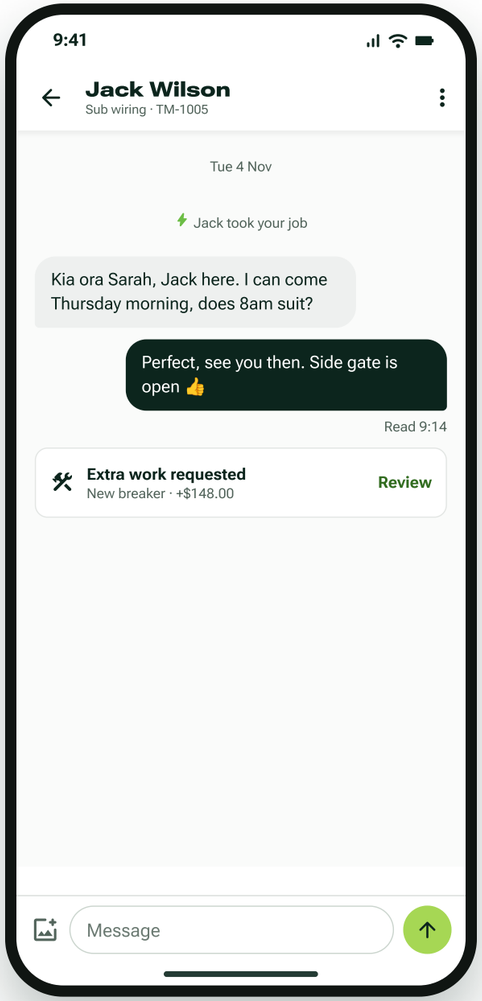

Shared by both modes; only the accent colour changes. Every job has one thread.

Messages `/messages`

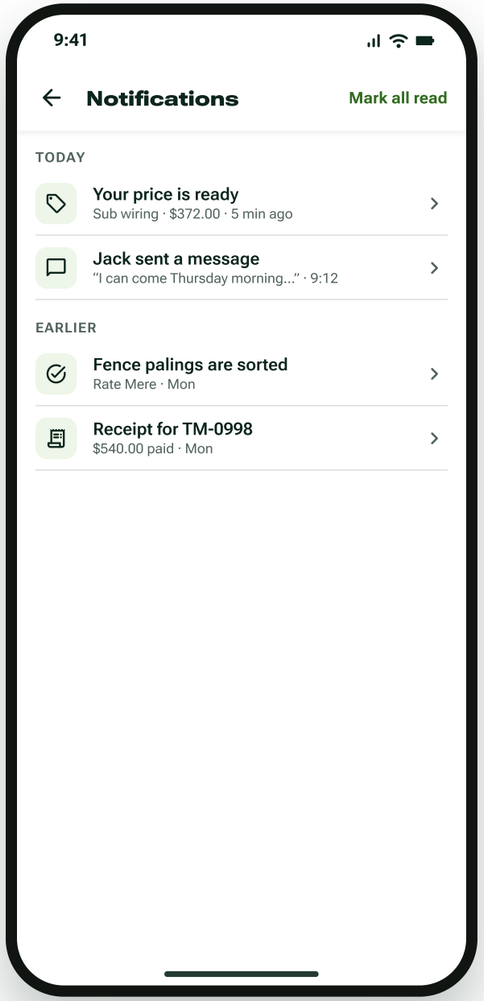

1. One thread per job (customer ↔ assigned tradie). Office messages appear as "Trade Marketplace" with the bolt avatar.
2. Unread: bold name + action-colour count. Sorted by latest message.
3. Same screen in trade mode (orange counts).
4. Empty: "No messages yet. They'll show up here once a tradie takes your job."

Message thread `/messages/[jobId]`

1. Bubbles: them = light grey, me = Forest. System events centred grey. Job events (extra work, completed) are cards with an action.
2. Composer: photo + text. Enter sends on desktop; on mobile, the send button. Max 2000 chars.
3. Live updates (poll or websocket). New message announces politely to screen readers (aria-live).
4. Contact details typed into messages are allowed. Phone numbers are not hidden.

Notifications `/notifications`

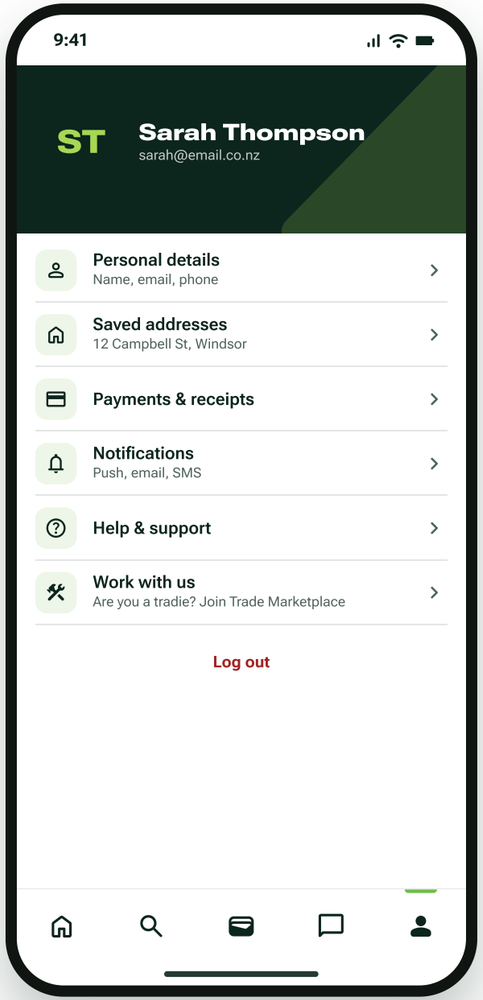

1. Each row deep-links to the thing (job, thread, receipt). Unread rows get a tint background.
2. Same events go out as push/email (user controls which in Account → Notifications).
3. Already prototyped at /notifications — needs wiring to real events.

Account & help

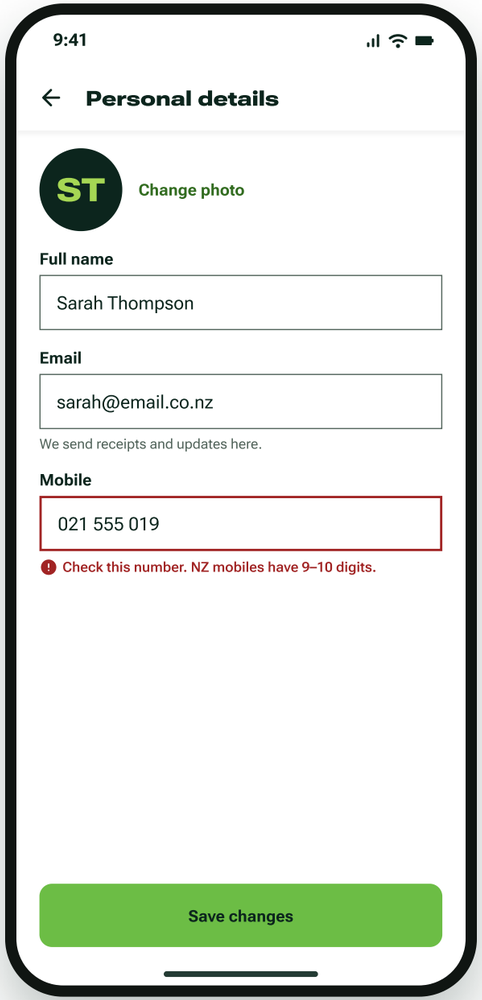

Plain lists, big tap targets. Help is where the curious find out how pricing works.

Account `/profile`

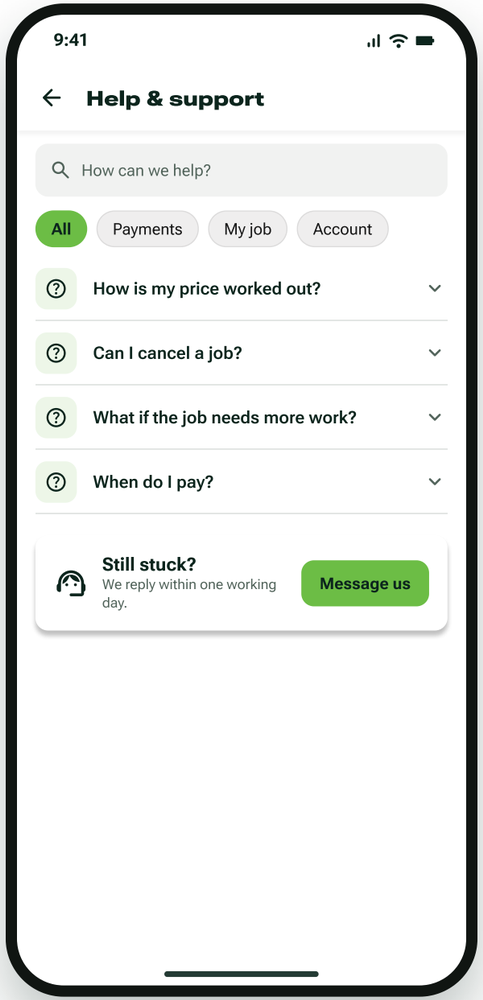

1. Account tab. Band with avatar (initials if no photo; tap to change).
2. "Work with us" → /for-tradies. A person with BOTH roles gets a "Switch to trade" row instead, which flips data-mode.
3. Log out asks for confirmation.

Personal details `/profile/details`

1. Standard form pattern: box fields, label above, hint below, error below in red with icon.
2. Error border is 2px Danger. Message says how to fix it, not just what's wrong.
3. Save: disabled until something changes. Success toast "Saved."

Help & support `/support`

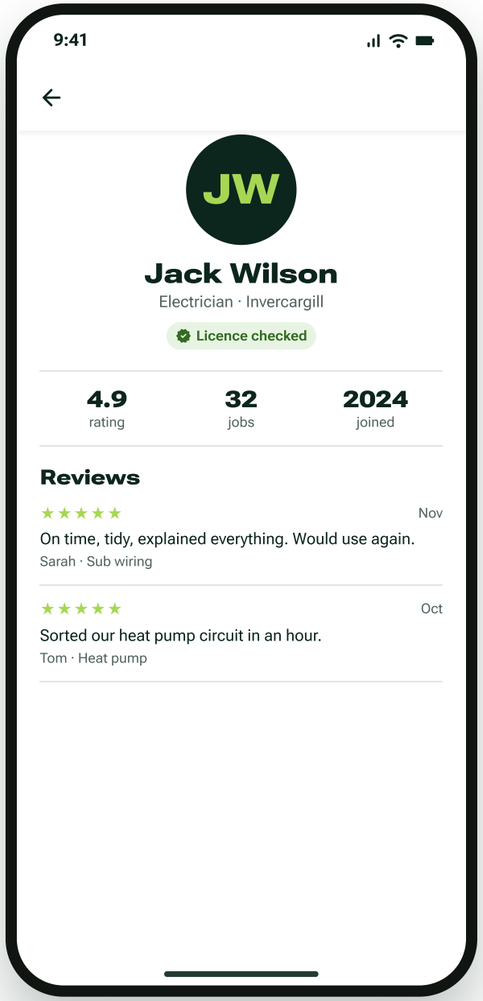

1. Searchable FAQ (accordion rows). Topic chips filter.
2. This is where the "how pricing works" explanation lives for curious customers. Not in the main flow.
3. Message us → opens a support thread with the office (prototype at /support).

Public profile & system states

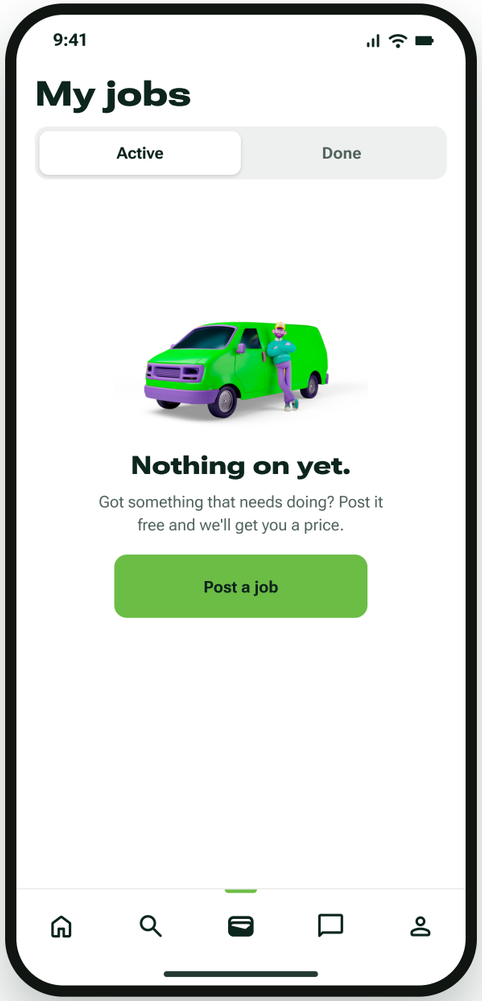

Every list and page needs these states designed, not left to defaults.

Tradie profile (public) `/tradies/[id]`

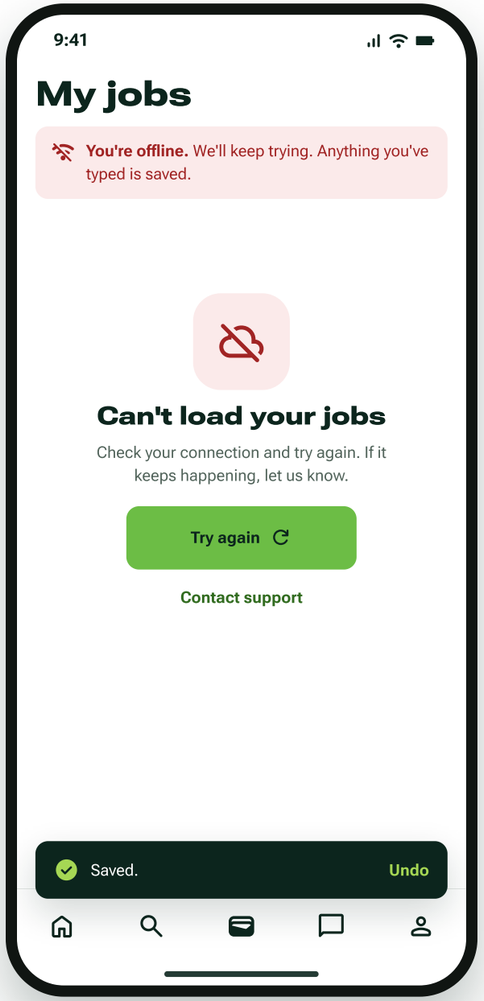

1. Public, no login needed. Shows first name + trade + region only.
2. Badge wording must match what the office actually checked ("Licence checked", never "Certified").
3. Reviews: newest first, reviewer first name + job type. Empty: "No reviews yet."

Empty state `any list`

1. Every list has an empty state: illustration (optional) + short heading + one line + one action.
2. Tone: friendly, not sorry. "Nothing on yet." not "No data found".
3. Search with no results: "No jobs match that. Try fewer filters." + Reset filters.

Offline / error `any`

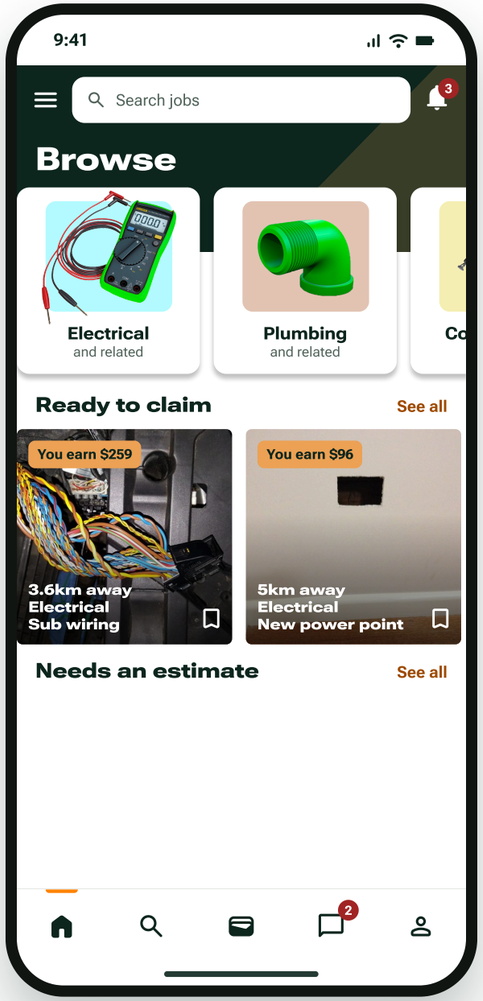

1. Three layers: offline banner (top, persistent), page error (centre, with Try again), toast (short confirmations, 4s, with Undo where possible).
2. Error copy: what happened + what to do. Never show raw error codes; log them.
3. 404 page uses the same layout: "Can't find that page." + Go home.

Finding work

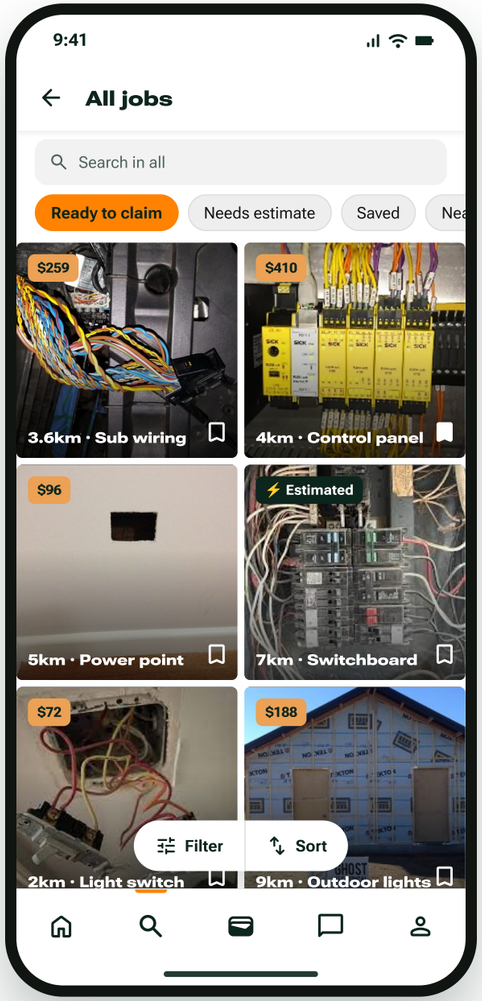

The original Browse layout, now in Hi-Vis. Two kinds of job: ready to claim (shows what you earn) and needs an estimate.

Home · job board `/jobs (trade home)`

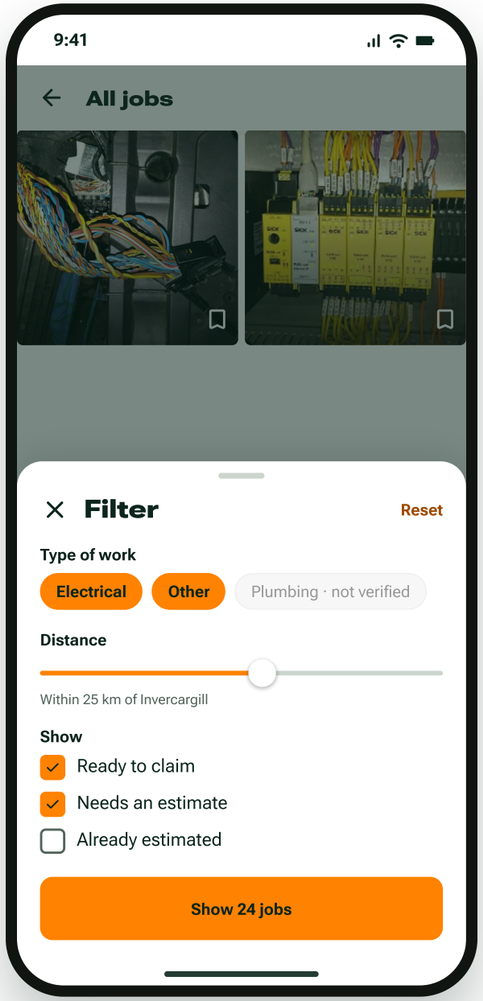

1. Trade mode: same layout as the original Browse, Hi-Vis/Amber. Bolt in the band is Amber.
2. "Ready to claim" = priced + paid jobs (BOOKABLE) the tradie is eligible for. Price tag shows what THEY earn, never the customer price.
3. "Needs an estimate" = REVIEW jobs in their trade + region. Tile flag "Estimate" instead of a price.
4. Category tiles filter All jobs. Only trades the tradie is verified for are bright; others greyed with "Not verified".

All jobs `/jobs?view=all`

1. Original 2-column photo grid (6px gaps, 5px radius). Floating Filter | Sort pill (original).
2. Quick filter chips across the top. Bookmark saves a job (signature colour when saved).
3. "⚡ Estimated" flag = you already sent an estimate (original "Quoted" flag).
4. Infinite scroll, 20 per page, skeleton tiles while loading.

Filter `/jobs (sheet)`

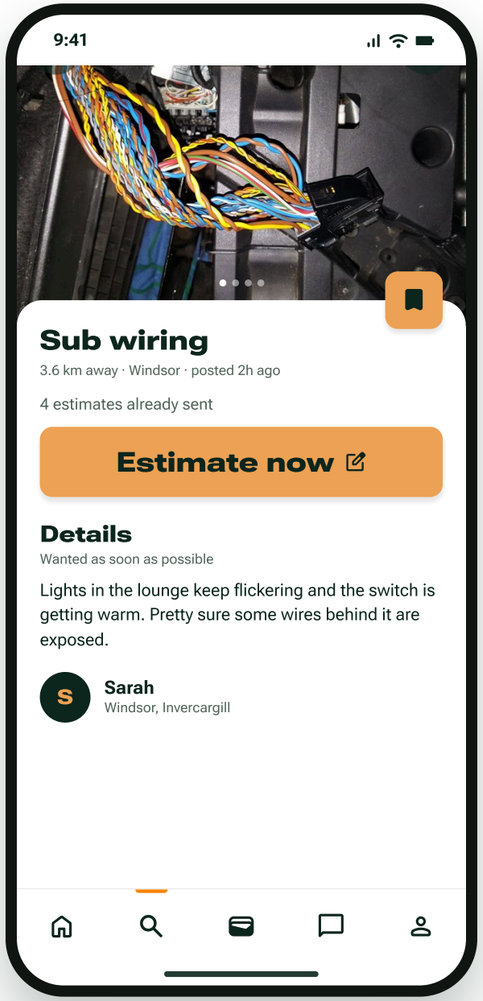

1. Original filter sheet, simplified. Button shows the live result count.
2. Trades not verified for are visible but disabled with the reason.
3. Filters persist in the URL (? type=&km=&show=) so Back works.

Estimating (blind)

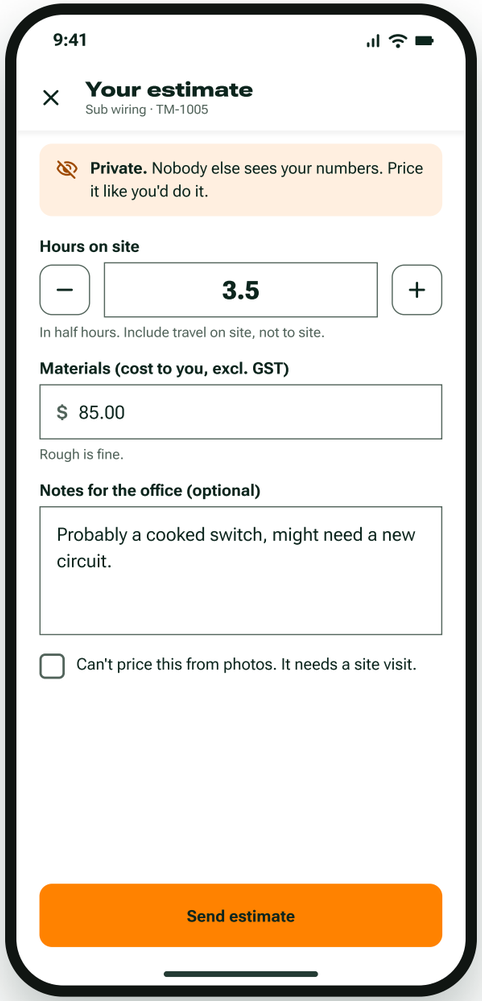

Estimates are private and quick: hours, materials, a note. They feed the price. Nobody sees anyone else's numbers.

Job · needs estimate `/jobs/[id] · REVIEW`

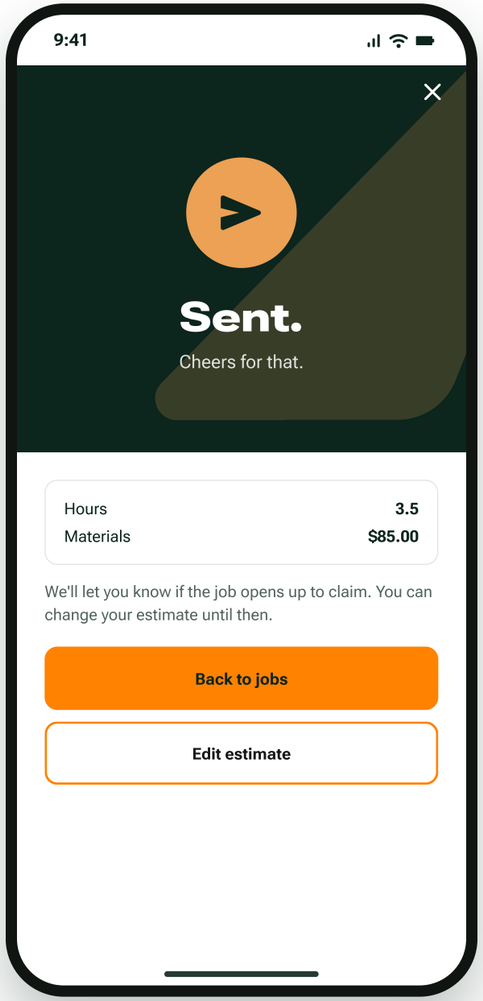

1. Original job detail: photo gallery + sheet with Save button + hero CTA (Amber in trade mode).
2. Customer shown by first name + suburb only. Full address after claiming.
3. "4 estimates already sent" builds urgency without showing anyone's numbers.
4. Not eligible (wrong trade / not verified): hero is replaced by a banner explaining why.

Your estimate (blind) `/jobs/[id]/estimate`

1. Blind estimate: hours (stepper, 0.5 steps, 0.5–40) + materials $ + optional note.
2. Never show other estimates, the average or the final customer price here.
3. Can edit until the job is priced (then read-only with "Priced at $x — you earn $y").
4. Site-visit tick flags the job for the office.

Estimate sent `/jobs/[id]`

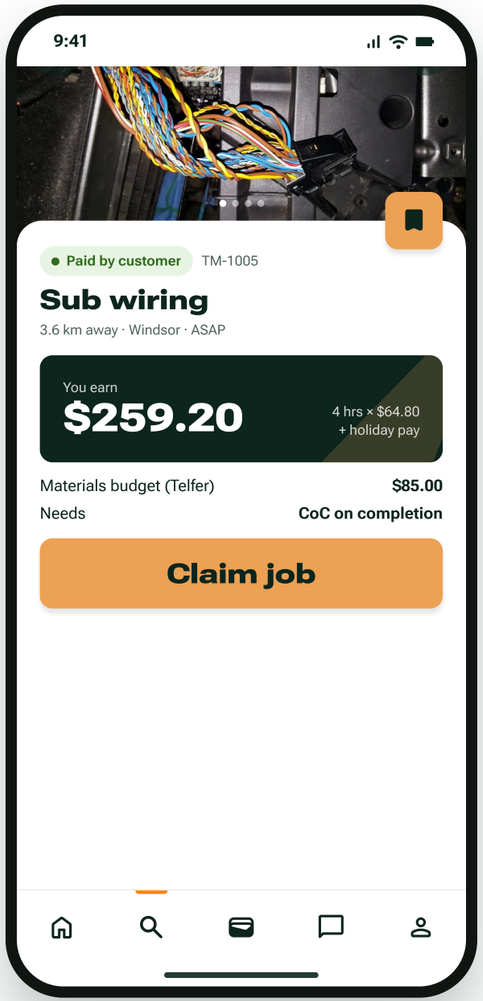

1. Same success pattern as the customer "Posted" screen, trade colours.
2. Tile in the grid now shows the "⚡ Estimated" flag.

Claiming a job

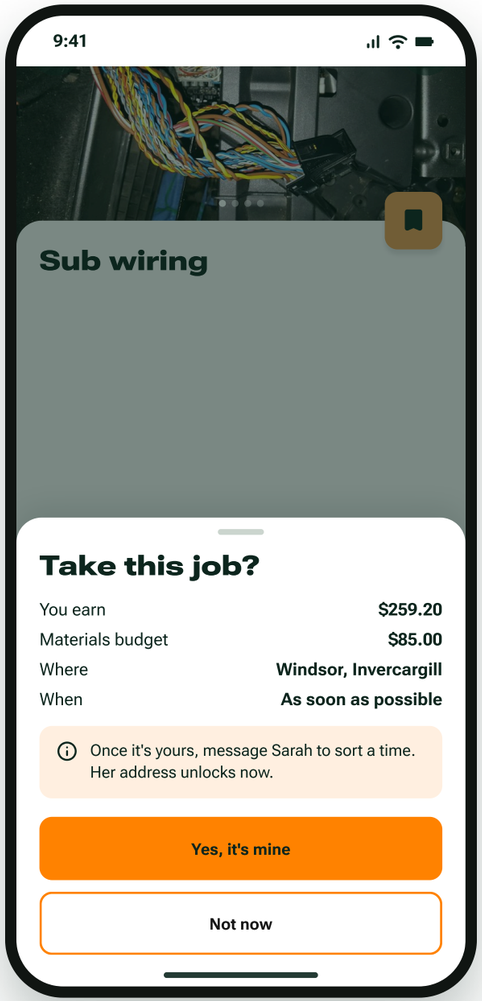

Claimable jobs are already priced and paid. The tradie sees exactly what they earn, confirms, and it's theirs. First in wins.

Job · ready to claim `/jobs/[id] · BOOKABLE`

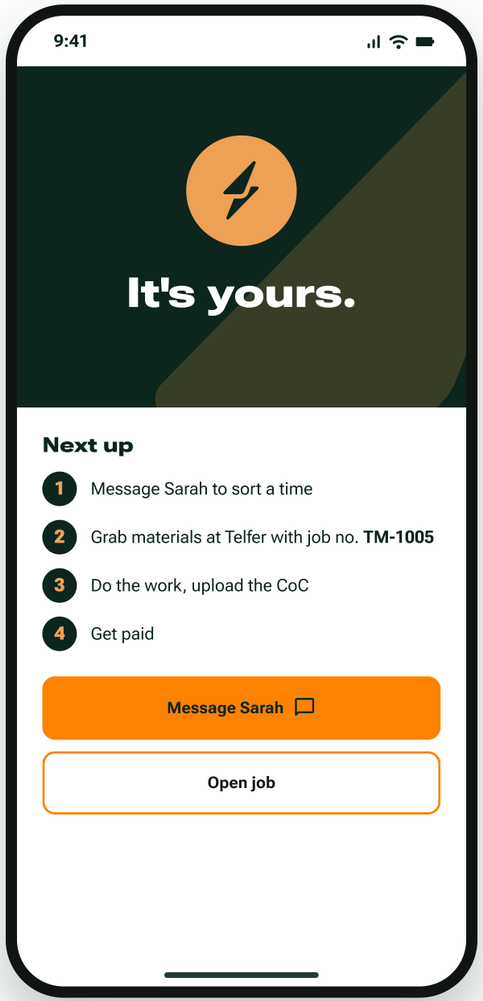

1. Claimable job. The money block shows what the tradie earns (hours × their rate). Never the customer price or our margin.
2. Materials budget + Telfer job number are part of the job (business plan).
3. Claim → review sheet (next). Race: if someone else claims first, show "Too slow — someone else got this one." and return to the list.

Claim · review `/jobs/[id] (sheet)`

1. Confirm step before claiming (claims are first-come). Primary = claim.
2. Button shows a spinner and blocks double taps. Server is the source of truth for the race.

Claimed `/jobs/[id] · ASSIGNED`

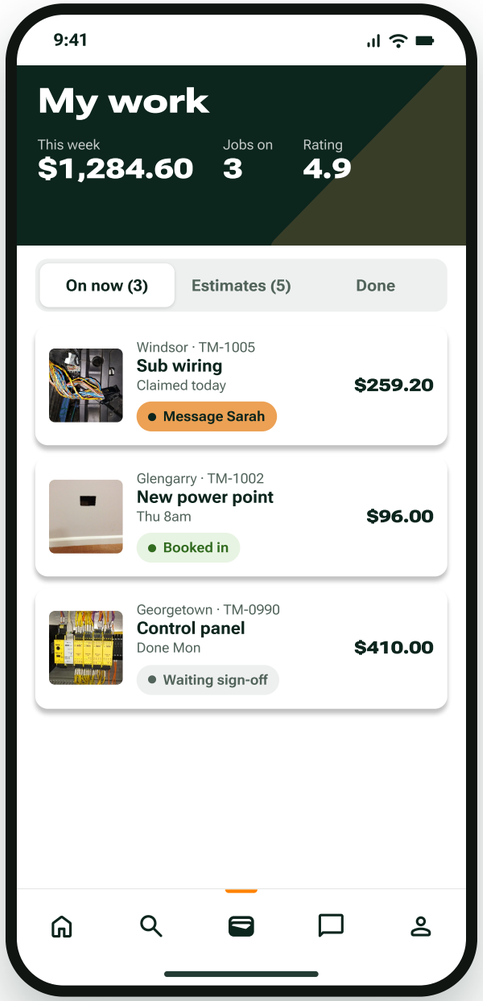

1. Claim success: bolt mark in a signature circle (bolt flash animation).
2. Numbered next steps = the whole tradie job in four lines.

Doing the job

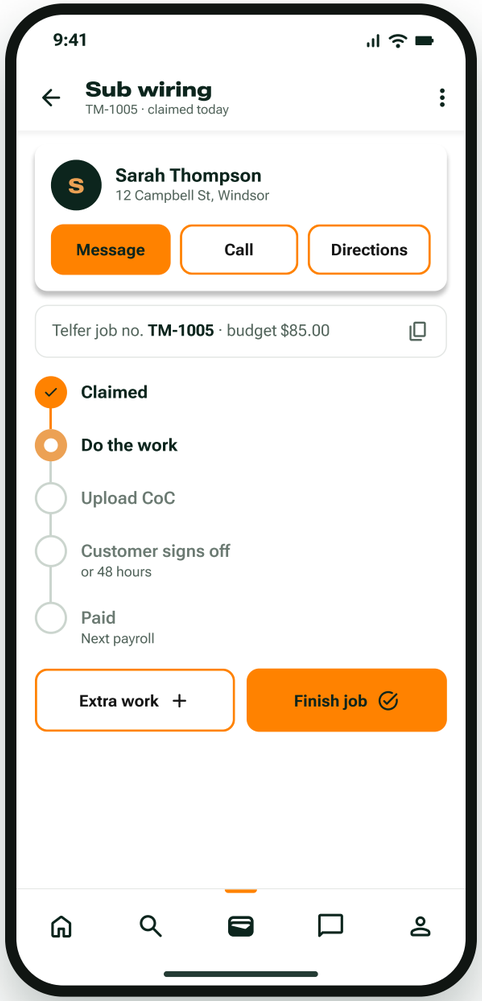

Everything for the job on one screen: the customer, the address, the materials job number and the next step.

My work `/dashboard (trade)`

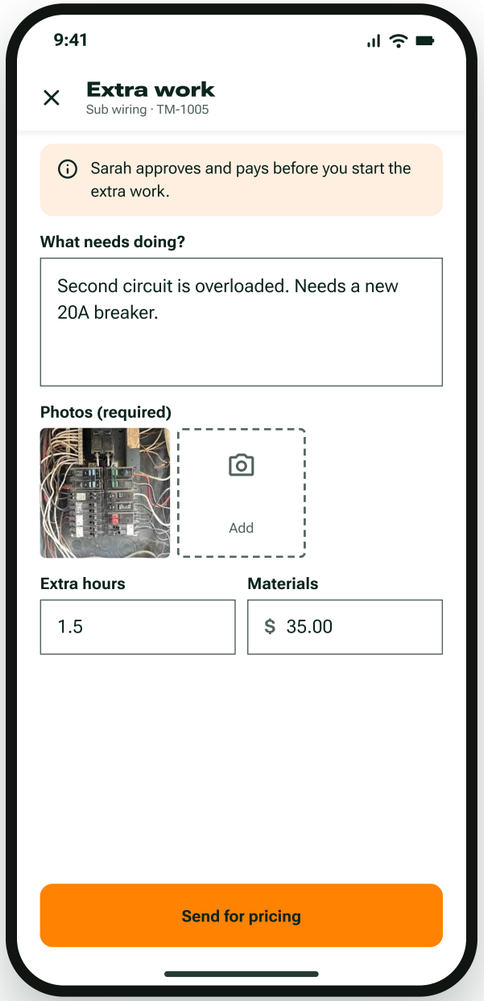

1. Trade "Jobs" tab. Summary in the band: earned this week, jobs on, rating.
2. Pills tell the tradie their next move ("Message Sarah", "Upload CoC"), not the database status.
3. Estimates tab: estimates sent and their outcome (Priced / Not taken).

Job workspace `/jobs/[id] · ASSIGNED (trade)`

1. Everything a tradie needs on site: contact, address, materials job number (copy), tracker, two actions.
2. Directions → opens Maps with the address.
3. ··· menu: Can't do this job (hand back), Report a problem.

Request extra work `/jobs/[id]/variation`

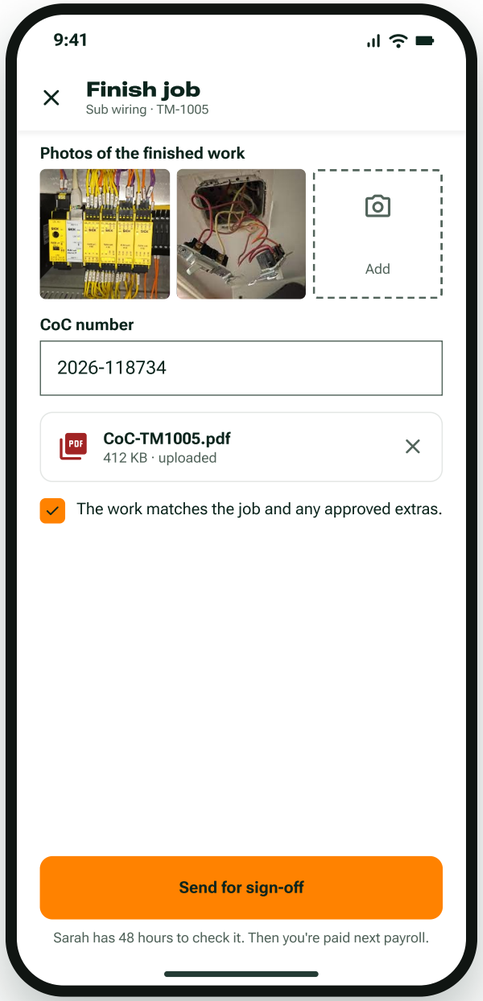

1. Variation request. Photos required. The office prices it (or a pre-set rate), then the customer approves and pays.
2. Statuses the tradie sees: Sent → Priced → Approved (go ahead) / Declined (don't do it).
3. While waiting, the job tracker shows "Waiting on Sarah to approve extra work".

Finishing & getting paid

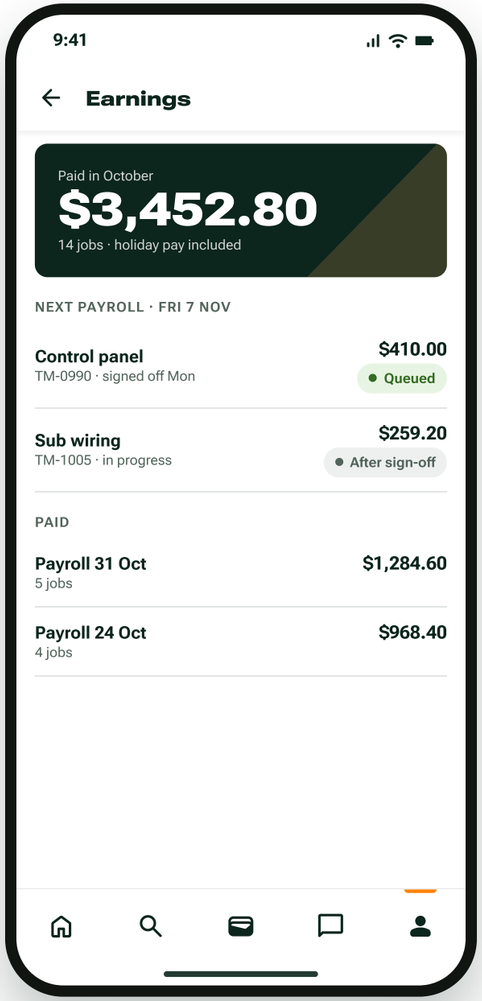

Evidence in, customer signs off (or 48 hours pass), payroll pays. Show every step honestly.

Finish job `/jobs/[id]/complete`

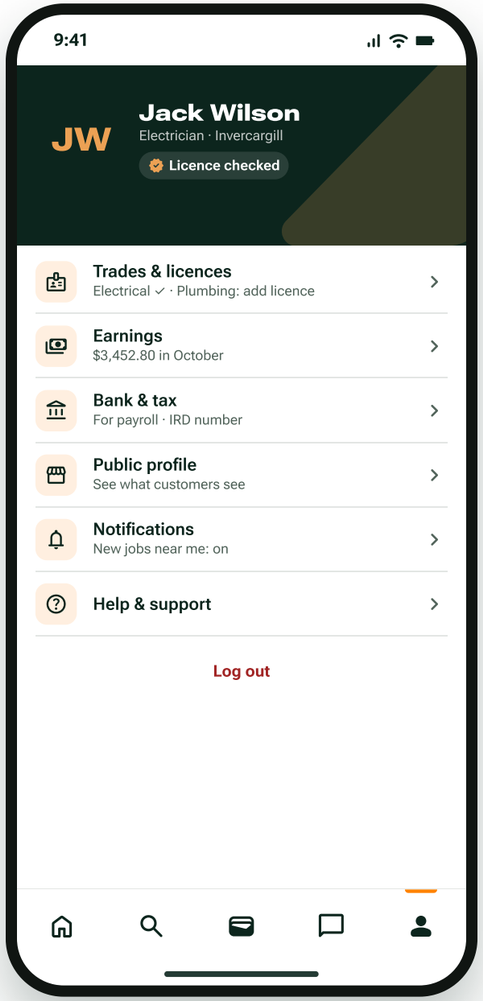

1. Electrical: CoC number + PDF/photo required (existing server rule).
2. Other trades: evidence fields come from that trade's config. Until configured, show "Completion for Plumbing is coming soon. Message us to finish this job."
3. Upload errors inline on the file card with Retry.

Earnings `/earnings`

1. Payouts from the manual payroll records. Wording: "Queued", "Paid". Never claim money moved before it has.
2. Tap a payroll → breakdown per job (hours, rate, holiday pay).
3. Lives under Account on mobile; a top-level tab on desktop.

Account & verification `/profile (trade)`

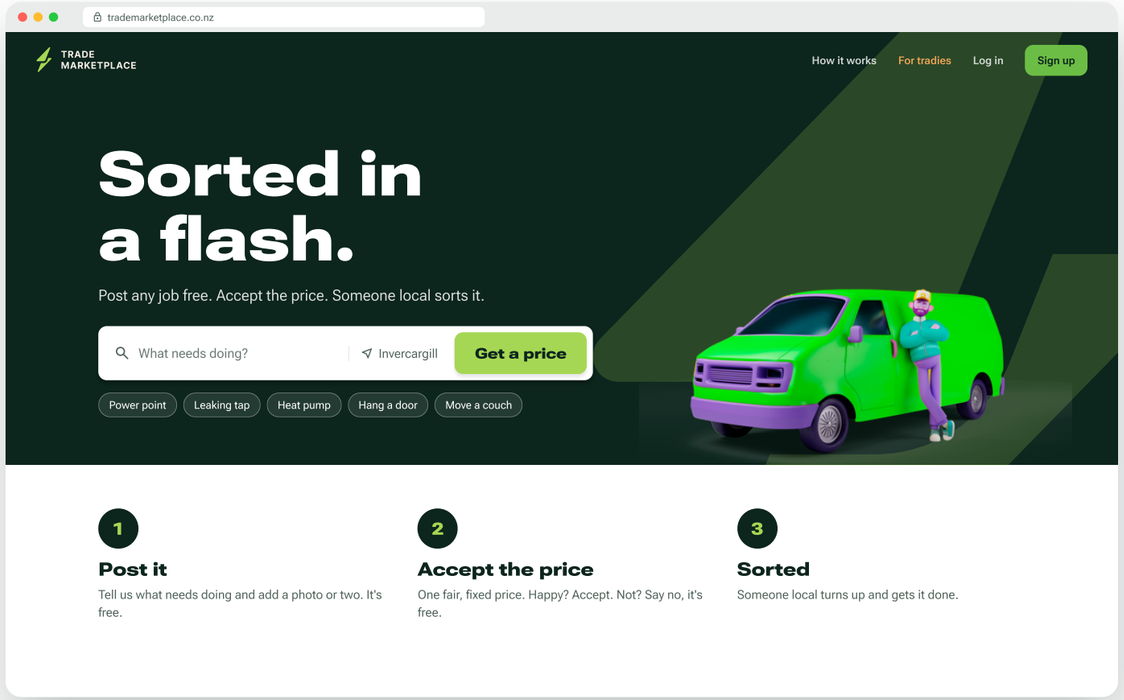

1. Verification status is visible at the top. Pending: Amber "Checking your licence (usually 1 working day)".
2. Trades & licences: one row per trade, each with its own status. Adding a trade = upload licence → office checks.
3. Bank & IRD details are sensitive: masked after saving, re-auth to edit.

Desktop: landing & customer job

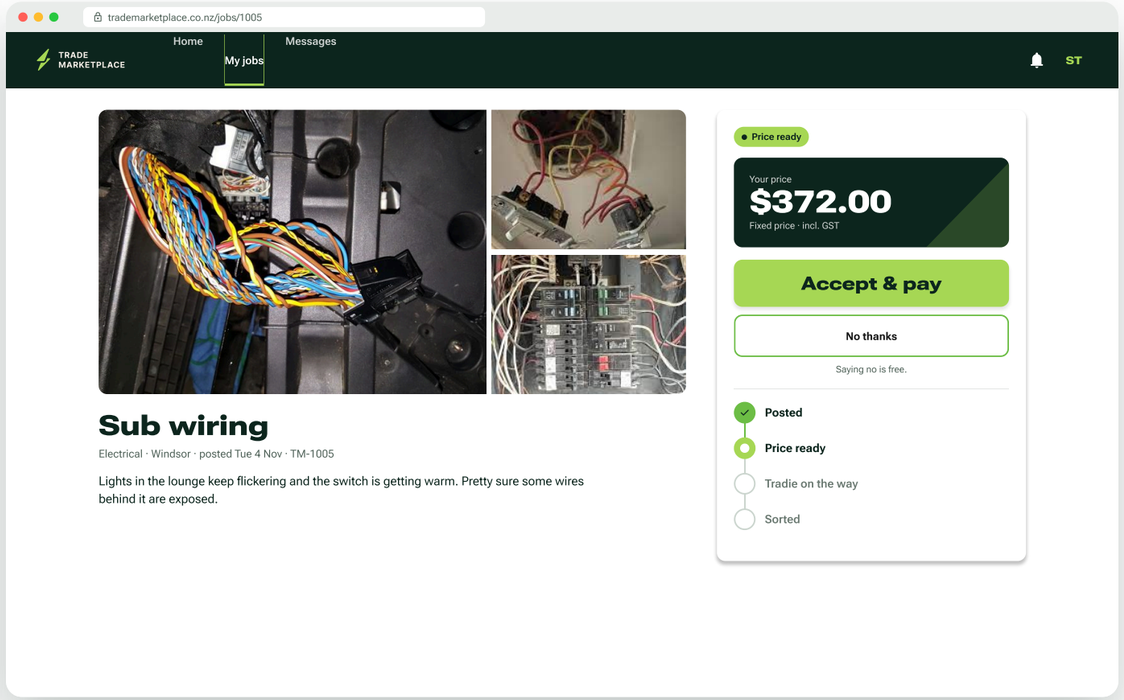

Desktop uses the same components arranged wider. The original design was mobile only, so these layouts are new. They're the approved desktop direction from this guide.

Landing (desktop) `/`

1. Desktop landing ≥1024px. Same content as mobile, wider: hero text left, van right, search + location + hero CTA in one bar.
2. Content max 1200px centred (padding 120 at 1440). Display type 80px on desktop (64 mobile token × 1.25).
3. Below the fold (not shown): popular jobs, reviews, "For tradies" band in Hi-Vis, footer.

Customer job (desktop) `/jobs/[id]`

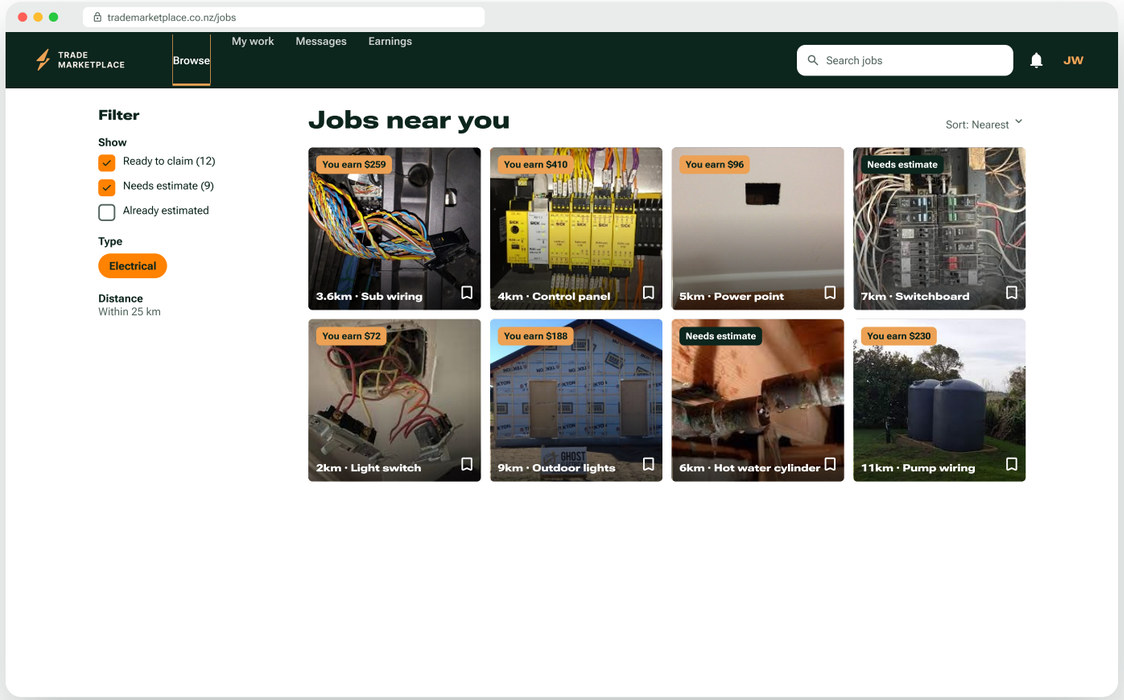

1. Desktop job page: 2 columns. Left = gallery + details (max 640 text). Right = sticky 400px action card (status, price, CTA, tracker).
2. Same components as mobile, just arranged. No new styles.
3. Bottom nav becomes the Forest top nav at ≥1024px.

Trade board & office queues

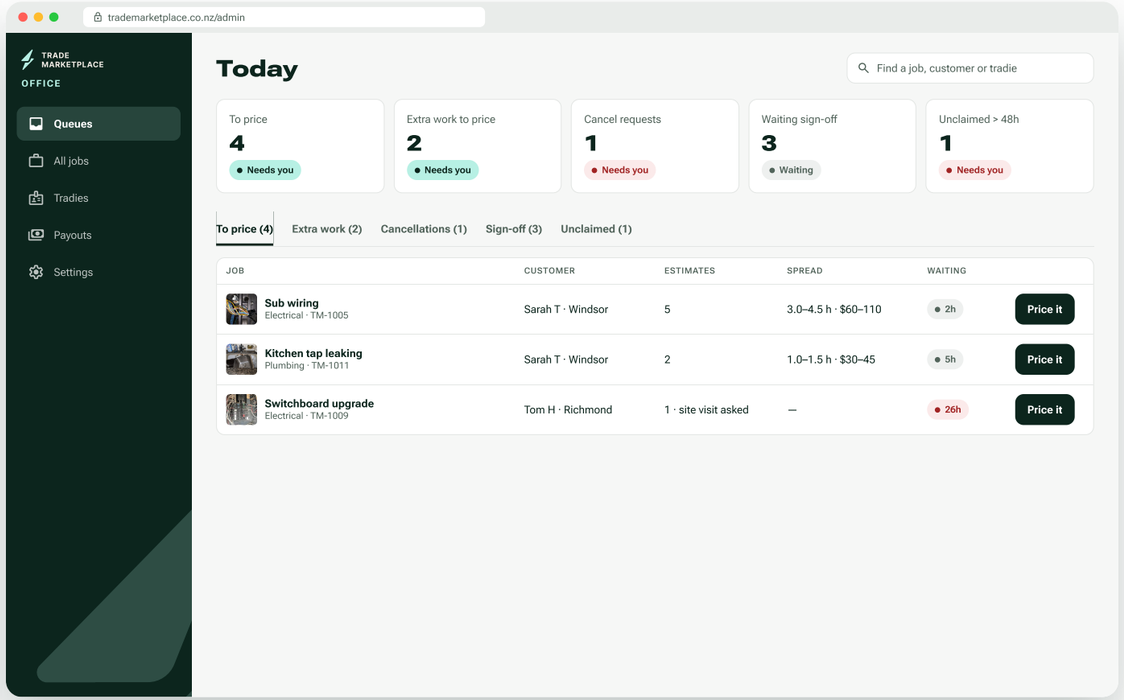

Tradies get a sidebar filter and a 4-column grid. The office is desktop-first with a Forest sidebar and Mint accents.

Job board (desktop) `/jobs`

1. Trade desktop: filters become a left sidebar (240px), grid goes 2 → 3 (md) → 4 (lg) columns.
2. Tiles keep the source look (gradient + Display text) at 210px tall.
3. Earnings becomes a top-level tab on desktop.

Office · queues `/admin`

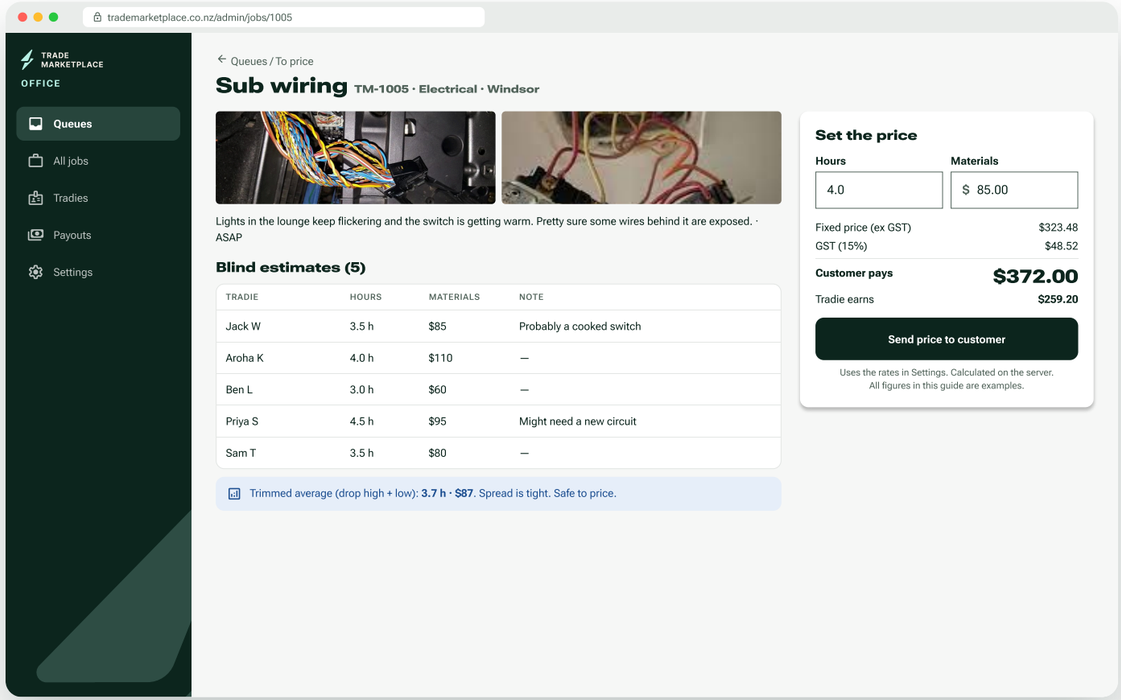

1. Office mode: Forest sidebar, Mint signature, Forest primary buttons with white labels.
2. Desktop-first (≥1024). On a phone, the sidebar collapses to a top menu and tables become cards.
3. KPI cards = queue counts. Red “Needs you” when something is overdue (e.g. waiting > 24h).
4. Each queue tab is a table: oldest first, one action per row.

06 — OFFICE

Pricing & tradie checks

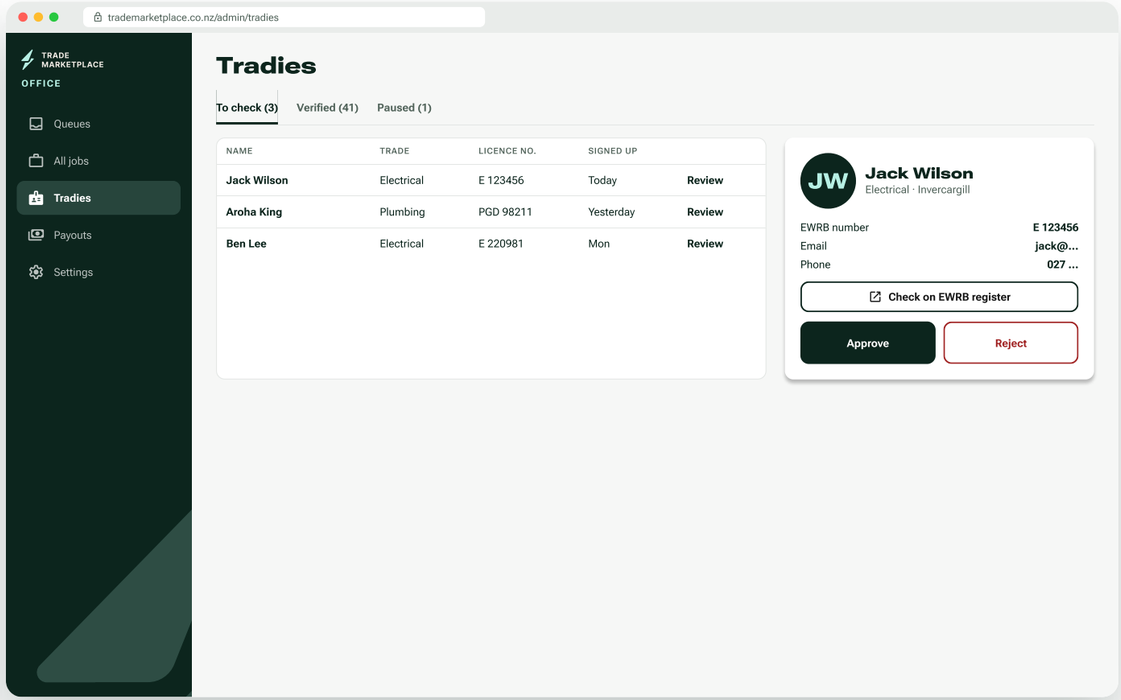

The two jobs the office does most. Big, calm screens with one clear action each.

Office · price a job `/admin/jobs/[id]/price`

1. Pricing workspace: job left, estimates table, suggested trimmed average, price builder right.
2. Breakdown values come from src/lib/pricing.ts on the server. The UI only displays them.
3. Future auto-pricing (5–10 estimates) uses this same screen to review flagged jobs only.

Office · tradie checks `/admin/tradies`

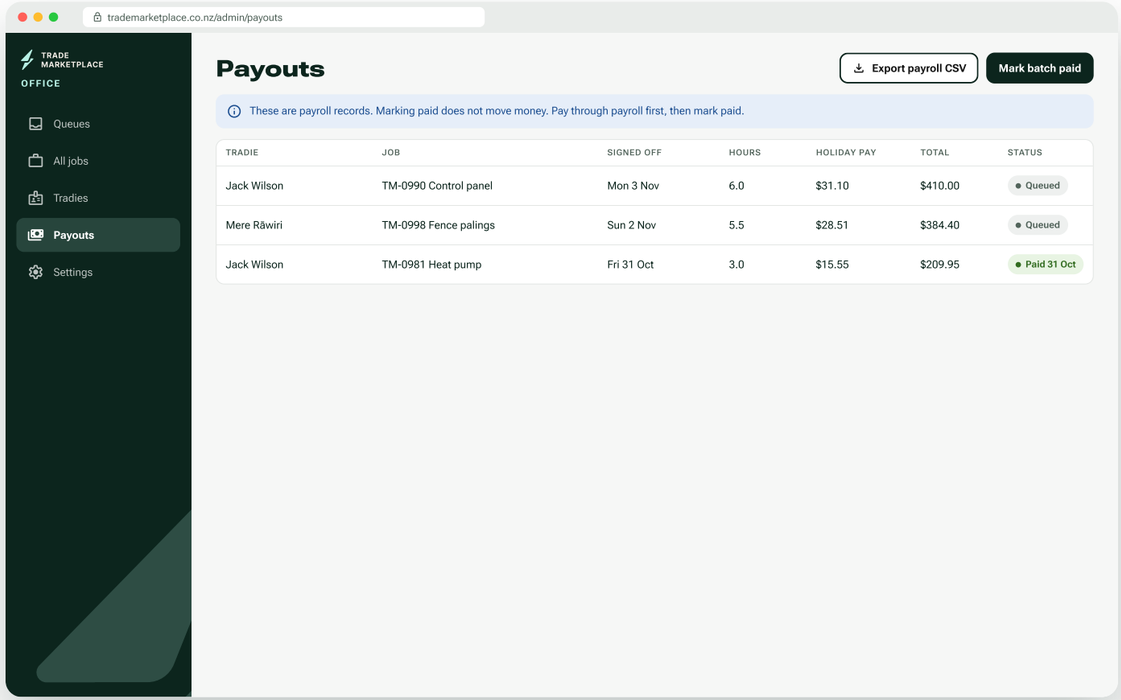

1. Manual licence check. Register link opens the official register in a new tab.
2. Approve/Reject ask for confirmation + an optional note (stored on the tradie, future audit log).
3. Per-trade verification, one row per trade a person claims.

06 — OFFICE

Payouts & settings

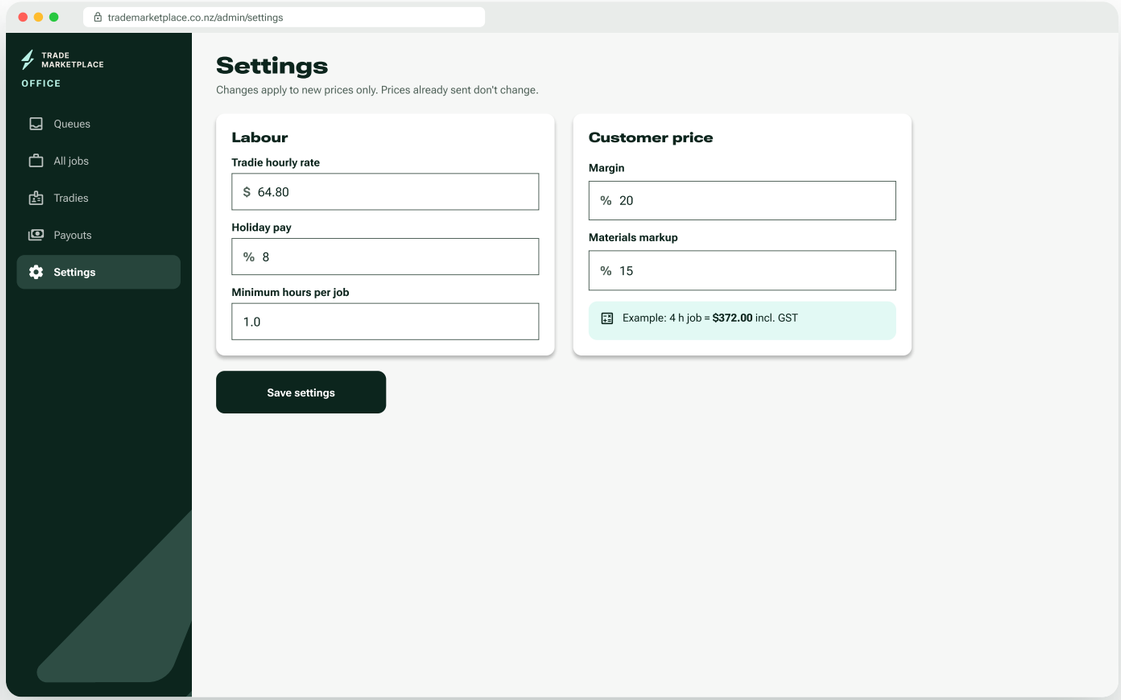

Money screens say exactly what does and doesn't happen. Records aren't transfers.

Office · payouts `/admin/payouts`

1. Existing payroll export + reconciliation, restyled with the table component.
2. Mark paid needs a confirmation that names the batch total.

Office · settings `/admin/settings`

1. Settings form with live example price (server-calculated preview).
2. Save disabled until changed; pending + success states. Values shown here are placeholders: use real settings.

07 — COPY

Words on screen

Write like a good tradie talks: short, straight, friendly. Customer screens never explain how it works; trade screens tell people their next move. NZ English.

Say this, not that

Post a job	~~Create a request, submit a job~~
Your price	~~Quote, estimate (to customers)~~
Accept & pay	~~Proceed to checkout~~
No thanks	~~Reject quote~~
Tradie / someone local	~~Service provider, contractor~~
Sorted	~~Resolved, completed~~
Extra work	~~Variation (to customers)~~
You earn	~~Payout amount, remuneration~~
Claim job	~~Accept assignment~~
Something's not right	~~Raise a dispute~~

Microcopy

Empty jobs	**Nothing on yet.**
Posted	**Posted. We're on it.**
Price ready (push)	**Your price for Sub wiring is ready.**
Payment done	**Paid. You're booked.**
Claimed	**It's yours.**
Claim lost	**Too slow. Someone else got this one.**
Offline	**You're offline. Anything you've typed is saved.**
Generic error	**Something went wrong on our end. Try again in a minute.**
Wrong password	**That email and password don't match.**

Formats

Money	**$1,284.60** Intl en-NZ NZD. Always 2 decimals. Say "incl. GST".
Dates	**Tue 4 Nov** Year only if not this year. Times: 8am, 2:30pm.
Relative	**2h ago · Yesterday** Under 7 days; then the date.
Distance	**3.6 km away** 1 decimal under 10 km, none above.
Phone	**021 555 0192** NZ spacing. tel: links.
Job ref	**TM-1005** Always with the job, copyable.
Names	**Sarah · Jack W** First name in public; full after booking.
Case	**Sentence case** Buttons and headings. No ALL CAPS except eyebrows.

Accessible and quick

Accessibility is part of “done”, not a later pass. Motion is short and useful. It confirms something happened; it never makes people wait.

Accessibility checklist

1. WCAG 2.2 AA is the bar. Every pair in the colour table passes; don’t invent new ones.
2. Keyboard: every action reachable with Tab, in reading order. Visible focus ring everywhere (2px #2163C6, 2px offset).
3. Tap targets 44×44 minimum, 8px apart.
4. Real elements: <button> for actions, <a> for navigation, <label> on every input, native radios and checkboxes styled.
5. Headings in order (one h1 per screen). Landmarks: header, nav, main.
6. Status changes announced: role="status" for toasts and saved states, role="alert" for errors.
7. Images: job photos get alt from the job title (“Photo 1 of 3: Sub wiring”). Illustrations alt="".
8. Text zoom 200% and 320px width: no horizontal scroll, nothing cut off.
9. Respect prefers-reduced-motion: no bolt flash, no slide-ins, instant changes.
10. Never colour alone: pills have words, errors have icons + text, the active tab is filled + has a bar.

Motion

Press	120ms · scale .98	Buttons, cards, tiles
State change	200ms · ease-out	Chips, tabs, pills, toggles
Sheet in	320ms · ease-out · from bottom	Sheets, filters
Sheet out	200ms · ease-in-out	
Page	200ms fade + 8px rise	New page content (not the nav)
Toast	200ms in · 4s · 200ms out	Pauses on hover/focus
Bolt flash	400ms: tick scales 0.6→1.08→1, Lime/Amber glow 0→40%→0	Only big wins: Posted, Paid, Claimed, Sorted
Skeleton	1.2s shimmer loop	Shown after 300ms delay

```
--trade-dur-fast: 120ms;  --trade-dur-base: 200ms;  --trade-dur-slow: 320ms;
--trade-ease-out: cubic-bezier(.2,.8,.2,1);
--trade-ease-in-out: cubic-bezier(.65,0,.35,1);
```

How to build it

Fits the current stack: Next.js 15 App Router, React server components, Tailwind v4 and CSS modules. No new framework. Tokens first, then components, then screens.

```
src/
  styles/
    tokens.css            ← kit/tokens.css (replaces brand.css)
    components.css        ← reference; port per component
  components/
    ui/Button.tsx  Field.tsx  Choice.tsx  Upload.tsx
       StatusPill.tsx  Card.tsx  JobTile.tsx  JobRow.tsx
       CategoryTile.tsx  PriceBlock.tsx  Tracker.tsx
       Sheet.tsx  Banner.tsx  Toast.tsx  Avatar.tsx
       Stars.tsx  Icon.tsx  Empty.tsx  Skeleton.tsx
    shell/BottomNav.tsx  TopNav.tsx  AppBar.tsx
          BandHeader.tsx  OfficeSidebar.tsx  ModeProvider.tsx
  app/ (routes as on the Sitemap page)
public/fonts/roboto-flex/RobotoFlex.woff2
public/fonts/material-symbols/MaterialSymbolsRounded.woff2
```

```
// app/layout.tsx: set the mode on the server, no flash of green
const mode = !user ? 'customer'
  : user.role === 'ADMIN' ? 'office'
  : user.role === 'TRADIE' ? 'trade' : 'customer';
return <html lang="en-NZ" data-mode={mode}>…

// StatusPill: one map, three audiences
<StatusPill status={job.status} audience="customer" />
// → kind + label from src/lib/status-labels.ts (Job states page)

// Tailwind v4: expose tokens as utilities
@theme { --color-action: var(--trade-action);
         --color-signature: var(--trade-signature); … }
```

Data

Server components fetch; server actions mutate. Money and status always from the server. Optimistic UI only for messages and saves.

Performance

LCP < 2.5s on 4G. Images via next/image (AVIF/WebP, sized). Fonts preloaded, font-display: swap. JS per route < 170 KB.

Testing

Playwright at 320, 390, 768, 1024, 1440. axe check on every route. Visual snapshots of each screen in this guide.

Security

Uploads (CoC, licences) behind auth before launch. No payment keys in the client. Rate-limit auth and messages.

08 — BUILD IT

What changes in today's code

From an audit of the web-app branch (feature/hosted-demo-preview-20261022). The engine (actions, pricing, schema) stays. These are front-end changes only.

AREA	TODAY	CHANGE TO
Tokens	brand.css has no orange or mode tokens	**Replace with kit/tokens.css; add data-mode**
Status chips	Tailwind amber/sky colours in JOB_STATUS	**StatusPill kinds (Job states page)**
Category icons	Emoji ⚡🔧🔥🔨 + Tailwind tints	**3D illustrations + category tints**
Stars	text-amber-500 ★	**Signature colour, Stars component**
CTA labels	Forest-label fix applied by hand, screen by screen	**--trade-on-action token in the Button component**
Nav icons	Original SF glyph outlines (temporary OK)	**Material Symbols before launch**
Trade colour	Tradie screens are green	**data-mode="trade" → Hi-Vis/Amber**
Copy	Electrician/CoC wording everywhere; 4 categories only	**Per-trade labels from one config; add "Other" (any labour)**
Customer copy	"Tradies provide private estimates... TM sets your price" on post/dashboard	**Post it · accept the price · sorted (how-it-works lives in Help)**
Desktop	Centred 390px frame on wide screens	**Desktop layouts (section 06)**
Old docs	frontend-handoff.md etc. conflict	**This guide supersedes; archive them**

Build order & definition of done

Five phases, each shippable. One task = one branch = one PR (see AGENTS.md). Rough times assume one developer plus AI agents.

1 — 2–3 days

Foundations

- tokens.css + fonts + icons
- ModeProvider + data-mode
- Button, Field, Icon, StatusPill
- Status label map

2 — 1 week

Components

- Cards, tiles, rows, price block
- Sheet, banner, toast, tracker
- Shell: nav, app bar, band header
- Empty, error, skeleton

3 — 1–2 weeks

Customer flow

- Home, post a job (4 steps)
- Job page, all states
- Pay, receipt, my jobs
- Extra work, sign-off, review

4 — 1–2 weeks

Trade flow

- Job board, all jobs, filter
- Estimate, claim (race-safe)
- Workspace, extra work, finish
- My work, earnings, verification

5 — 1–2 weeks

Shared + office

- Messages, notifications, account
- Office queues, price a job
- Tradies, payouts, settings
- Desktop layouts, QA pass

A screen is done when…

- Matches the screen in this guide at 390 and the desktop rules
- Loading, empty, error and success states all built
- Works at 320 / 390 / 768 / 1024 / 1440 with no sideways scroll
- lint · typecheck · test · build all green (CI)
- Uses tokens and kit components only (no hex, no one-off styles)
- Keyboard + screen reader pass; axe has no violations
- Copy matches section 07; numbers from the server
- PR has screenshots (mobile + desktop) and names who/which AI built it

Decided (23 Oct 2026)

- Anyone can take Other jobs; licensed trades need a licence on file; verified badge
- AI can't price → gold $30 quote bounty (24h), comes off the final price
- Team jobs: one lead sets the split; customer sees only the lead
- Stripe + Apple Pay, test mode until the end · Mapbox
- Booking windows instead of chat · phone hidden until claimed
- Launch: Invercargill. Full list: Web App Design Spec / DECISIONS.md

TRADE
MARKETPLACE

Sorted in a flash.

Trade Marketplace Front-End Build Guide · Version 1.0 · October 2026 · Questions: Matt (design) · William (engineering)
