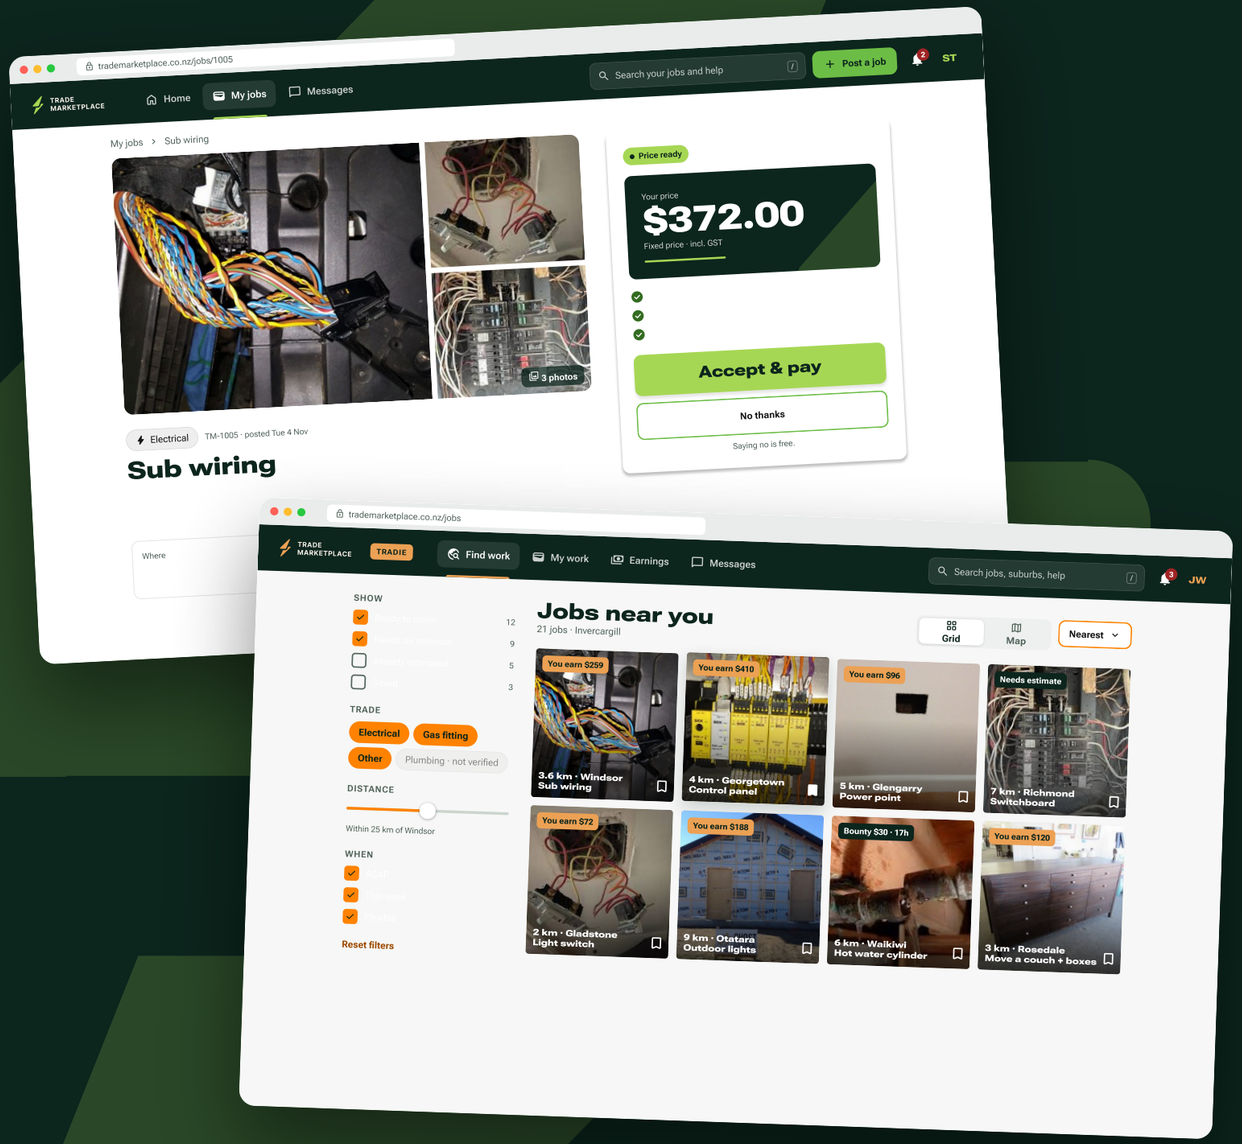
TRADE
MARKETPLACE

VERSION 1.0 · OCTOBER 2026 · PRIORITY 1: THE WEB APP

Web App Design Spec

Every page of the Trade Marketplace web app, designed. The rules, the effects and the animations. What to build, page by page, so nothing gets forgotten.



107 pages & surfaces · 57 desktop screens + 5 phone screens · 27 named animations · public site · customer · tradie · office

00 — START HERE

What this is

The web app is priority one. This spec designs every page of it at desktop size, sets the rules for how it looks and moves, and lists every page and state so nothing gets forgotten. It says **what** to build. How to build it is the developer's call.

How it fits with the first guide

Brand Guidelines	Logo, colour, type, voice. Top authority.
Front-End Build Guide (v1)	Tokens, components and the mobile (390px) screens. Still the mobile spec.
This Web App Design Spec	Desktop and tablet (≥ 768px) layouts for every page, the full page inventory, effects, motion. Same tokens + components, plus web.css.
Code (web-app branch)	The engine. Server actions, pricing and statuses stay as they are.

Reading a screen page

1. Numbered pins on the mockup match the numbered notes beside it. Notes say what the thing is and does. **Motion** lists the named animations used (M01–M27, see section 03). **Inventory** links back to the page list (section 02), so you can tick pages off.

Priorities

P1	**Launch** Needed before real customers use it	**82**
P2	**Soon after** First few months	**19**
P3	**Later** Nice to have	**6**

Figures are examples. Prices, names, ratings and counts in the mockups show the layout; real values come from the server. Business rules (pricing, payouts, eligibility) don't change because of anything drawn here.

01 — WEB RULES

Ten rules for the web app

These decide the calls this spec doesn't draw. If a page isn't mocked, build it from these rules, the components and the nearest mocked page.

1 **Same components, wider layouts**
Desktop rearranges the mobile components. It doesn't invent new styles. Anything new goes into web.css with a name.

2 **Content max 1200px, centred**
12 columns, 24px gutters. Reading text max 680px. Forms max 560–760px, one column.

3 **One main action per view**
One primary or hero button per screen or card. Everything else is secondary, ghost or a link.

4 **Sticky where it helps**
App nav sticky. On job pages the status card sticks to the right as you scroll. Wizard summary sticks.

5 **Everything clickable shows it**
Pointer cursor, a hover state and a focus ring. Cards lift (M03), rows tint, links underline.

6 **Hover never hides information**
Nothing important only appears on hover (touch screens and keyboards can't hover). Hover only adds polish.

7 **Keyboard first-class**
/ focuses search, Esc closes overlays, Enter submits, arrows move in galleries and steppers. Tab order follows reading order.

8 **Drawers for side tasks, dialogs for decisions**
Estimate and extra work open in a right drawer (keep context). Confirms and money decisions use a dialog.

9 **Brand device on every big moment**
Forest band + bolt at 20% on heroes, headers and success screens. Bolt flash (M10) only for real wins.

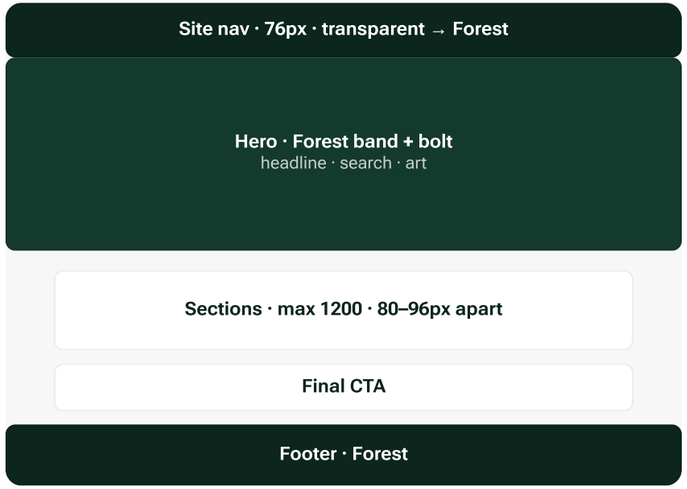
10 **Same URL, every device**
Every page works from 320px to 2560px. Same routes; layout adapts.

Three shells

Every page sits in one of three shells. Build the shells first; every page then only fills the main area.

Public site

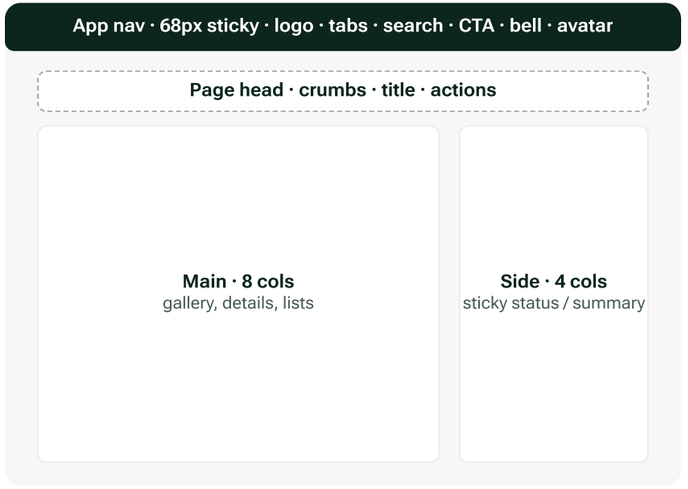
Landing, how it works, for tradies, help, legal



Site nav: logo · How it works · For tradies (Amber) · Help · Log in · Sign up. Transparent over the hero, solid Forest after scrolling past it (M06). Under 1024: logo + menu button → full-screen menu.

App (customer & tradie)

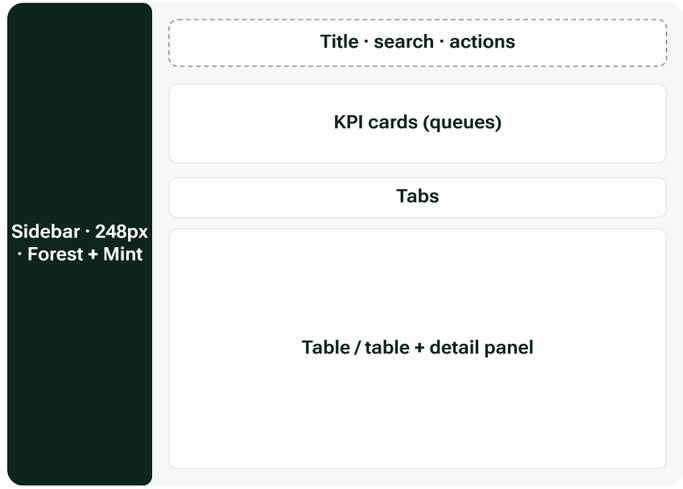
Everything after log-in. Mode sets the colours.



App nav: customer tabs Home · My jobs · Messages + "Post a job"; tradie tabs Find work · My work · Earnings · Messages + "Tradie" flag. Search (/), bell (dropdown), avatar (menu). Under 1024: the mobile bottom nav from v1.

Office

Admin. Desktop-first, dense, tables.



Office: sidebar with counts per section, user at the bottom. Under 1024: top bar + menu sheet; tables turn into cards under 768.

Responsive: one page, three sizes

Same URL and content at every size. Below 1024 the app nav becomes the mobile bottom nav from the first guide, and side columns stack. Check every page at 320, 390, 768, 1024, 1440.

	≥1024px	768px	390px
Job page			Job board			Messages				≥1200px	768–1199px	390px

Public site · Sign up & log in (1/6)

Every page and surface. Tick each off when it's built and passes the done checklist (section 06). "Page" shows where its mockup is in this spec; "—" means build it from the rules and the nearest mockup.

	#	PAGE · ROUTE	WHAT'S ON IT	STATES TO DESIGN	PRIO	PAGE
☐	A01	**Home / landing** `/`	Hero + "What needs doing?" search, how it works (3 steps), categories, popular jobs, why us (fixed price, checked tradies, no surprise bills), reviews, For tradies band, FAQ teaser, final CTA, footer	Signed-out · signed-in redirects to app home · region not covered	P1	p.19
☐	A02	**How it works** `/how-it-works`	The 3 steps in detail for customers (no pricing machinery), what's included, guarantees, FAQ, CTA	Default	P1	p.21
☐	A03	**For tradies** `/for-tradies`	Pitch to workers: jobs already priced, no lead fees, we do the paperwork. How it works for tradies, what you earn, requirements per trade, sign-up CTA, tradie FAQ	Default (trade colours)	P1	p.22
☐	A04	**Service pages (per trade)** `/services/[trade]`	SEO landing per trade incl. /services/other ("Anything else"): hero, common jobs, how it works, reviews, CTA	Trade live · trade coming soon (waitlist)	P2	p.23
☐	A05	**Location pages (per city)** `/[trade]/[city]`	SEO: "Electricians in Invercargill", local stats, suburbs covered, CTA. Same template as A04	Covered · not covered	P3	—
☐	A06	**Trust & safety** `/trust`	How tradies are checked, licences, CoC, insurance, payments held securely, what happens if something goes wrong, contact	Default	P1	p.24
☐	A07	**Not in your area yet** `/coming-soon`	Shown when an address is outside coverage: friendly message, waitlist email + suburb, share link	Joined · already on list	P1	p.25
☐	A08	**About us** `/about`	Founders' story (started 4 years ago), mission, team photos, press	Default	P2	p.26
☐	A09	**Contact** `/contact`	Form (topic, email, message), help-centre links, response time, business details (NZBN, address)	Sending · sent · error	P1	p.26
☐	A10	**Help centre home** `/help`	Search, topic cards (Customers, Tradies, Payments, Account), popular articles, contact	Search results · no results	P1	p.27
☐	A11	**Help article** `/help/[slug]`	Breadcrumbs, article, "Was this helpful?" yes/no, related articles, contact	Helpful voted	P1	p.27
☐	A12	**Public tradie profile** `/tradies/[id]`	Photo, first name, trade(s), region, verified badges, rating, jobs done, reviews	No reviews · paused tradie (404)	P2	p.29
☐	A13	**Terms of use (customers)** `/legal/terms`	Long-form legal template: sticky contents, sections, last updated	—	P1	p.28
☐	A14	**Tradie terms** `/legal/tradie-terms`	Same template	—	P1	p.28
☐	A15	**Privacy policy** `/legal/privacy`	Same template	—	P1	p.28
☐	A16	**Cookie notice + banner** `/legal/cookies`	Banner on first visit: Accept / Only essential / Settings; settings dialog	First visit · choices saved	P1	p.28
☐	B01	**Log in** `/login`	Split layout: brand panel left, form right (email, password, show/hide, forgot, log in, sign up link)	Error · locked (too many tries) · loading	P1	p.30
☐	B02	**Sign up · choose** `/signup`	"I need a job done" / "I'm a tradie" cards	—	P1	p.31
☐	B03	**Sign up · customer details** `/signup/customer`	Name, email, mobile, password, terms	Email taken · weak password	P1	p.31

Sign up & log in · Customer app (2/6)

#	PAGE · ROUTE	WHAT'S ON IT	STATES TO DESIGN	PRIO	PAGE
B04	**Sign up · tradie details** `/signup/tradie`	Name, email, mobile, password, trades (multi, incl. Other / general labour), licence numbers for licensed trades, work area	Licence format error	P1	p.32
B05	**Verify email** `/verify`	Check your inbox (resend with cooldown) → verified ✓ → continue	Expired link · already verified	P1	p.33
B06	**Forgot / reset password** `/recovery`	Request → sent → new password → done	Expired · invalid link	P1	p.33
B07	**Session expired** `(dialog)`	Dialog over the page: "You've been logged out" → log in again, keeps the page and any draft	—	P1	p.34
B08	**Two-step verification** `/login/2fa`	Code from SMS/app. Office accounts required, others optional	Wrong code · resend	P3	—
C01	**Customer home** `/ (signed in)`	Big "What needs doing?" box, jobs needing you (action cards), active jobs, categories, recent	New user (empty) · has jobs	P1	p.35
C02	**Post a job · describe** `/jobs/new`	Wizard: steps rail left, form centre, live summary card right. Description + type: main trades + Other (any labour: moving, cleaning, gardening, assembly…)	Draft restored	P1	p.36
C03	**Post a job · photos** `/jobs/new?step=photos`	Drag-and-drop zone + grid, 1–6 photos, safety tip	Uploading · failed · too big	P1	p.37
C04	**Post a job · where & when** `/jobs/new?step=where`	Address autocomplete (coverage area only) + time windows grid (next 7 days × morning/afternoon/evening), Any time, ASAP, access notes	Outside coverage → A07	P1	p.38
C05	**Post a job · check & post** `/jobs/new?step=review`	Summary with edit links, hero "Post it"; signed-out → sign-up dialog	Posting · error	P1	p.39
C06	**Posted (success)** `/jobs/[id]?posted=1`	Bolt-flash success, tracker, "we'll let you know", notification opt-in	—	P1	p.40
C07	**Job · getting your price** `/jobs/[id]`	Gallery + details left, sticky status card right (tracker, edit, cancel free)	Taking > 24h banner	P1	p.41
C08	**Job · price ready** `/jobs/[id]`	Price reveal card: big price, inclusions, Accept & pay, No thanks	—	P1	p.43
C09	**Decline price dialog** `(dialog)`	Optional reasons, confirm "No thanks", job closed free	—	P1	p.34
C10	**Checkout** `/pay/[paymentId]`	Order summary, payment method, card fields (provider), pay button, TEST banner	Declined · 3-D Secure · processing	P1	p.44
C11	**Payment success** `/pay/[id]/done`	Bolt flash, "Paid. You're booked.", receipt link, what happens next	Failed → back to checkout	P1	p.45
C12	**Job · booked / tradie confirmed** `/jobs/[id]`	Tradie card, message, tracker, receipt	Finding someone · confirmed	P1	p.46
C13	**Extra work approval** `(dialog + page state)`	Photos, description, extra cost, Approve & pay / Decline	Approved · declined	P1	p.47
C14	**Job · please check (sign-off)** `/jobs/[id]`	Evidence (CoC/photos), "Yes, all sorted" / "Something's not right", 48h note	Auto-completed	P1	p.48

Customer app · Tradie app (3/6)

#	PAGE · ROUTE	WHAT'S ON IT	STATES TO DESIGN	PRIO	PAGE
C15	**Leave a review** (dialog)	Stars, quick tags, comment, post	Posted · edit within 7 days	P1	p.48
C16	**Report a problem** /jobs/[id]/problem	Topic, details, photos; pauses auto-release	Sent	P1	—
C17	**Cancel job dialog** (dialog)	Before payment: free cancel. After: request (office reviews)	Requested	P1	p.34
C18	**My jobs** /dashboard	Tabs Active/Done/Cancelled, search, list/cards, status pills	Empty	P1	p.49
C19	**Payments & receipts** /profile/payments	Table of payments/refunds, download invoice	Empty	P1	p.50
C20	**Invoice / receipt** /receipts/[jobId]	Printable tax invoice, download PDF, print styles	—	P1	p.50
C22	**Job · needs a $30 quick look** /jobs/[id] · QUOTE_BOUNTY	AI can't price from photos/estimates: book a $30 quick look (comes off the price if they go ahead), pick windows, then normal price flow. New status QUOTE_BOUNTY	Booked · visited → price ready · declined	P2	p.42
C21	**Saved addresses** /profile/addresses	List, add/edit dialog, default	Empty	P2	—
D01	**Tradie home · setup checklist** /jobs (first visit)	New tradies: checklist (verify email, licence, photo, bank & IRD, work area, alerts) + progress; then becomes the job board	Pending verification	P1	p.51
D02	**Job board · list** /jobs	Filters sidebar, tabs Ready to claim / Needs estimate, photo grid, sort	Empty area · not verified	P1	p.52
D03	**Job board · map (desktop)** /jobs?view=map	Uber-style: list left, map right. 3 pin kinds: ready to claim (what you earn), needs an estimate (photos), needs a site visit (in person). Filter chips with counts, legend, hover row ↔ pin	No location permission · nothing in view	P1	p.53
D18	**Job map (phone)** /jobs?view=map	Full-screen map, "You're available" switch, floating chips (All · Claim · Bounty · Estimate), gold bounty pins, bottom sheet with swipeable job cards	Available on/off · no jobs in view	P1	p.54
D19	**Quote bounty (quote in person)** /jobs/[id] · QUOTE_BOUNTY	Gold $30 bounty, 24h countdown, Claim bounty → pick a customer window → visit → send fixed price; AI checks it; first dibs if accepted + fair, ignored if way off	Claimed · expired · price sent · ignored	P2	p.54
D20	**New job & bounty ping (when available)** (in-app + push)	Card over the map: distance, what you earn, time left (bounties gold), See / Skip. Quiet hours	Queued pings	P2	p.54
D21	**Lead adds a crew** /jobs/[id] (lead)	Crew panel on the workspace + drawer: pick from your crew or any worker, their part, share % / $ (adds to 100%), send invite	Invited · joined · declined	P2	p.60
D22	**Crew invite (accept/decline)** (push + in-app)	Who's asking, the job, your part, when, your share in $ and %	Accepted · declined · expired	P2	p.55
D23	**My crew** /profile/crew	People you work with (like friends): add, remove, trades, ratings	Empty	P2	p.60
D24	**Need a hand? (request a specialist)** /jobs/[id]/help	Solo lead asks for a specialist (e.g. plumber on a bathroom reno) inside the same job, no new job	—	P3	—
D25	**Verified quoter dashboard** /quoting	Accuracy, bounties, 2% earnings, weekly bonus, quote history vs final price, how you earn	Not a quoter → hidden	P3	p.63

Tradie app · Shared (customer + tradie) (4/6)

#	PAGE · ROUTE	WHAT'S ON IT	STATES TO DESIGN	PRIO	PAGE
D26	**Become a verified quoter** `/quoting/apply`	Invite-only application + screening steps	Invited · screening · approved · declined	P3	—
D27	**Book a time window** `/jobs/[id]/book`	Pick one of the customer's windows; preset updates (On my way, Running late, Reschedule) instead of chat	Booked · rescheduled	P1	p.55
D04	**Job · needs estimate** `/jobs/[id]`	Gallery, details, "Estimate now" opens drawer	Already estimated · not eligible	P1	p.56
D05	**Estimate drawer** `(drawer)`	Hours stepper, materials, note, site visit; private banner	Saved · edit	P1	p.56
D06	**Job · ready to claim** `/jobs/[id]`	You earn card, materials budget, needs, Claim job	—	P1	p.57
D07	**Claim confirm + result** `(dialog)`	Confirm → It's yours (bolt flash) / Too slow	Lost race	P1	p.57
D08	**My work** `/dashboard`	Columns: To book · On now · Waiting sign-off · Paid (read-only board), estimates tab	Empty	P1	p.58
D09	**Job workspace** `/jobs/[id]`	Customer + address + map, Telfer no., tracker, messages inline, Extra work / Finish job	Waiting on extra approval	P1	p.59
D10	**Request extra work** `(drawer)`	What, photos (req), hours, materials, send for pricing	Sent · priced · approved · declined	P1	p.59
D11	**Finish job** `/jobs/[id]/complete`	Evidence photos, CoC number + PDF (electrical), declaration, send for sign-off	Upload failed · trade not configured	P1	p.61
D12	**Earnings** `/earnings`	Month total, chart, next payroll, payouts table, payroll detail	Empty	P1	p.62
D13	**Estimates history** `/earnings/estimates`	Table: job, your estimate, final price, outcome	Empty	P2	—
D14	**Trades & licences** `/profile/trades`	Per trade: status (checked/pending/rejected), licence no., expiry, upload, add trade	Pending · rejected with reason	P1	p.64
D15	**Bank & tax** `/profile/payroll`	Bank account, IRD number, tax code, KiwiSaver; masked after save, re-auth to edit	Missing → blocks payout	P1	p.64
D16	**Work area & job alerts** `/profile/area`	Base suburb + radius map, trades, alert channels	—	P1	—
D17	**Public profile editor** `/profile/public`	Photo, bio, preview of public profile	—	P2	—
E01	**Messages** `/messages`	3 panes: threads · conversation · job context. Kept for problems; booking windows + preset updates replace most chat	No threads · offline	P1	p.65
E02	**Notifications dropdown** `(header)`	Bell → panel: latest 8, mark all read, see all	Empty	P1	p.66
E03	**Notifications page** `/notifications`	Full list, filters (all/unread), grouped by day	Empty	P1	—

Shared (customer + tradie) · Office (admin) (5/6)

#	PAGE · ROUTE	WHAT'S ON IT	STATES TO DESIGN	PRIO	PAGE
E04	**Account · profile** `/profile`	Settings layout with left nav: Profile, Security, Notifications, Addresses/Payroll, Delete account	Saving · saved	P1	p.67
E05	**Account · security** `/profile/security`	Change email/password, sessions (log out other devices)	Wrong current password	P1	—
E06	**Account · notification preferences** `/profile/notifications`	Matrix: event × email/SMS/push	—	P1	p.67
E07	**Delete account / export data** `/profile/delete`	Explain what happens, blocked while jobs active, type to confirm	Blocked	P2	—

Motion rules & catalogue (1/2)

Short, purposeful, on brand. Every animation has a name so designers, devs and testers talk about the same thing.

1. Motion confirms something happened. It never makes people wait: nothing over 400ms blocks input.
2. Use the tokens: --trade-dur-fast 120, --trade-dur-base 200, --trade-dur-slow 320, --trade-ease-out, --trade-ease-in-out.
3. Only animate transform and opacity (plus clip-path for M09). Never width, height, top or left (except M24).
4. Big celebrations (M09 price reveal, M10 bolt flash) run once per event, never on revisits or refreshes.
5. prefers-reduced-motion: everything becomes an instant change, except the skeleton (static grey, no shimmer).
6. No bouncing logos, spinning loaders on full pages, auto-playing carousels or confetti. The bolt flash is our one flourish.

ID	NAME	WHAT HAPPENS	TIMING	WHERE
M01	**Page enter**	Main content fades in + rises 8px. Cards stagger 40ms (max 6, then all at once).	200ms · ease-out	Every page load / route change
M02	**Route transition**	Cross-fade between pages (View Transitions API). A job photo morphs from its tile into the job page header.	180ms fade · 320ms morph	List → job page, board → job
M03	**Hover lift**	Card rises 2px, shadow deepens to 0 10 24 / 18%. Photo inside zooms 1.04 (400ms).	160ms · ease-out	Job tiles, category tiles, job rows, cards that link
M04	**Button press**	Scale to .98 on press. Hover: brightness 1.06 (primary), tint fill (secondary), lift 1px + shadow (hero).	120ms	All buttons
M05	**Focus ring**	No animation. 2px #2163C6 ring, 2px offset, appears instantly.	0ms	Anything focusable
M06	**Hero bolt parallax + nav fill**	Bolt in the Forest band moves at 0.3× scroll (max 60px). Transparent site nav turns solid Forest with shadow after the hero.	Scroll-linked · nav 200ms	Landing, For tradies, service pages
M07	**Headline reveal**	Hero headline lines rise 16px + fade, 70ms apart. Then sub-copy, then search bar. Runs once per visit.	500ms · ease-out	Landing, For tradies hero
M08	**Search suggestions**	Dropdown fades in and scales .98→1 from the top edge. Results update as you type (debounce 150ms).	160ms	Hero search, header search, address field
M09	**Price reveal**	Forest price block wipes in left→right (300ms), the number counts up from $0 (700ms, ease-out), then reassurance ticks appear one by one (60ms apart). Once per job.	~1.1s total	Job · price ready (customer); You earn (tradie)

Motion catalogue (2/2)

All keyframes are in web.css (tm-rise, tm-pop, tm-spark, tm-wipe, tm-drawer, tm-dialog, tm-toast, tm-badge, tm-drop). Reduced motion turns them all off.

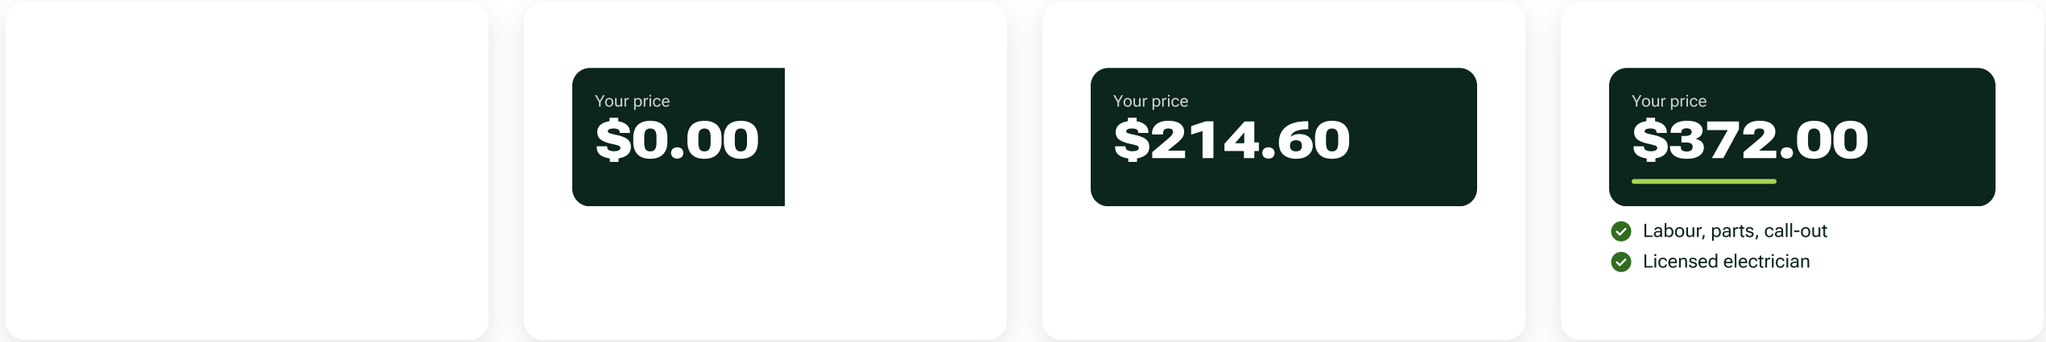
ID	NAME	WHAT HAPPENS	TIMING	WHERE
M10	**Bolt flash**	Signature circle pops (0.6→1.08→1, spring), the tick/bolt draws in, 8 sparks burst out 26px and fade, and a soft signature glow pulses behind. The brand's celebration.	600ms	Posted, Paid, It's yours, Sorted, Estimate sent. Big wins only.
M11	**Tracker progress**	Line fills down to the next step (400ms), then the new dot pops (200ms) and its label fades in.	600ms	Job trackers when status changes
M12	**Drawer**	Slides in from the right, scrim fades to 50%. Out: 200ms. Focus moves to the drawer title.	320ms in · 200ms out	Estimate, extra work, filters on narrow screens
M13	**Dialog**	Fades in and scales .96→1 from slightly below centre; scrim fades. Out: 150ms.	200ms	Confirms, sign-up gate, decline, claim
M14	**Toast**	Rises 12px + fades in at bottom right; a signature hairline shrinks to show time left (4s). Pauses on hover/focus.	200ms in · 4s · 200ms out	Saved, sent, copied, undo
M15	**Skeleton → content**	Skeletons shimmer (1.2s loop) after a 300ms delay; real content cross-fades in.	150ms cross-fade	Any data list or card
M16	**Tab underline**	Active indicator slides and resizes to the new tab.	200ms · ease-in-out	App nav, tabs, segmented controls
M17	**Number ticker**	KPIs and money count up from 0 the first time they enter view.	600ms · ease-out	Earnings, office KPIs, landing stats
M18	**Upload**	Thumbnail appears (scale .9→1), progress ring fills, a tick pops when done. Failed: red ring + Retry.	200ms + upload time	Photo and document uploads
M19	**Live message**	New bubble rises 8px + fades. Typing indicator: 3 dots bounce. Thread auto-scrolls only if already at the bottom.	160ms	Messages
M20	**Badge pop**	Count badge pops (0→1.15→1) when the number goes up. No animation when it goes down.	240ms	Nav badges, bell
M21	**Map pins**	Pins drop in 12px + fade, staggered 30ms. Hovering a list row grows its pin 1.15× in the action colour, and vice versa.	200ms	Tradie map view
M22	**Claim lost**	Card desaturates to grey (200ms) and a banner slides down: "Too slow. Someone else got this one." No shaking.	200ms	Claim race
M23	**Save**	Bookmark fills and pops 1.2× once.	160ms	Save job
M24	**Accordion**	Height animates to content; chevron rotates 180°.	200ms	FAQ, help, filters
M25	**Status change**	Pill colour cross-fades and pulses once (scale 1.05).	200ms	Status pills when a job moves on
M26	**Drop zone**	Dashed border turns solid action colour and the tint fills while a file is dragged over.	120ms	Photo/document upload areas
M27	**Bounty shimmer + countdown**	Gold bounty pins and cards glint every 4s (brightness + soft gold glow). Countdown rings tick down; under 2h the ring pulses gently. It should feel like a game.	300ms every 4s	Quote bounties: map pins, cards, pings, quoter dashboard

03 — MOTION

Storyboards: the two signature moments

Frame by frame, so the feel is unmistakable. Both run once per event.

M09 Price reveal



0 ms block starts wiping

150 ms wipe 55%

600 ms counting up

1100 ms underline + ticks

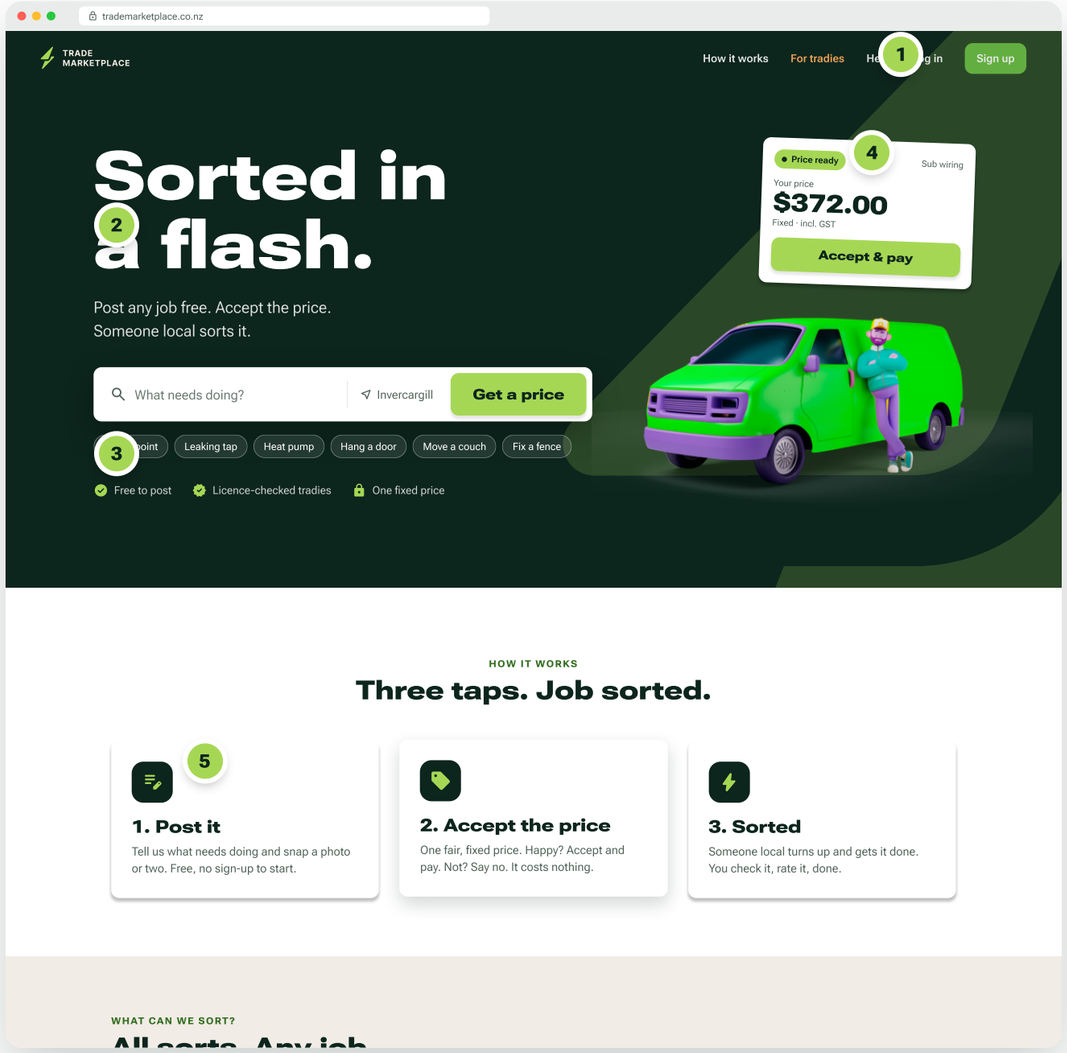
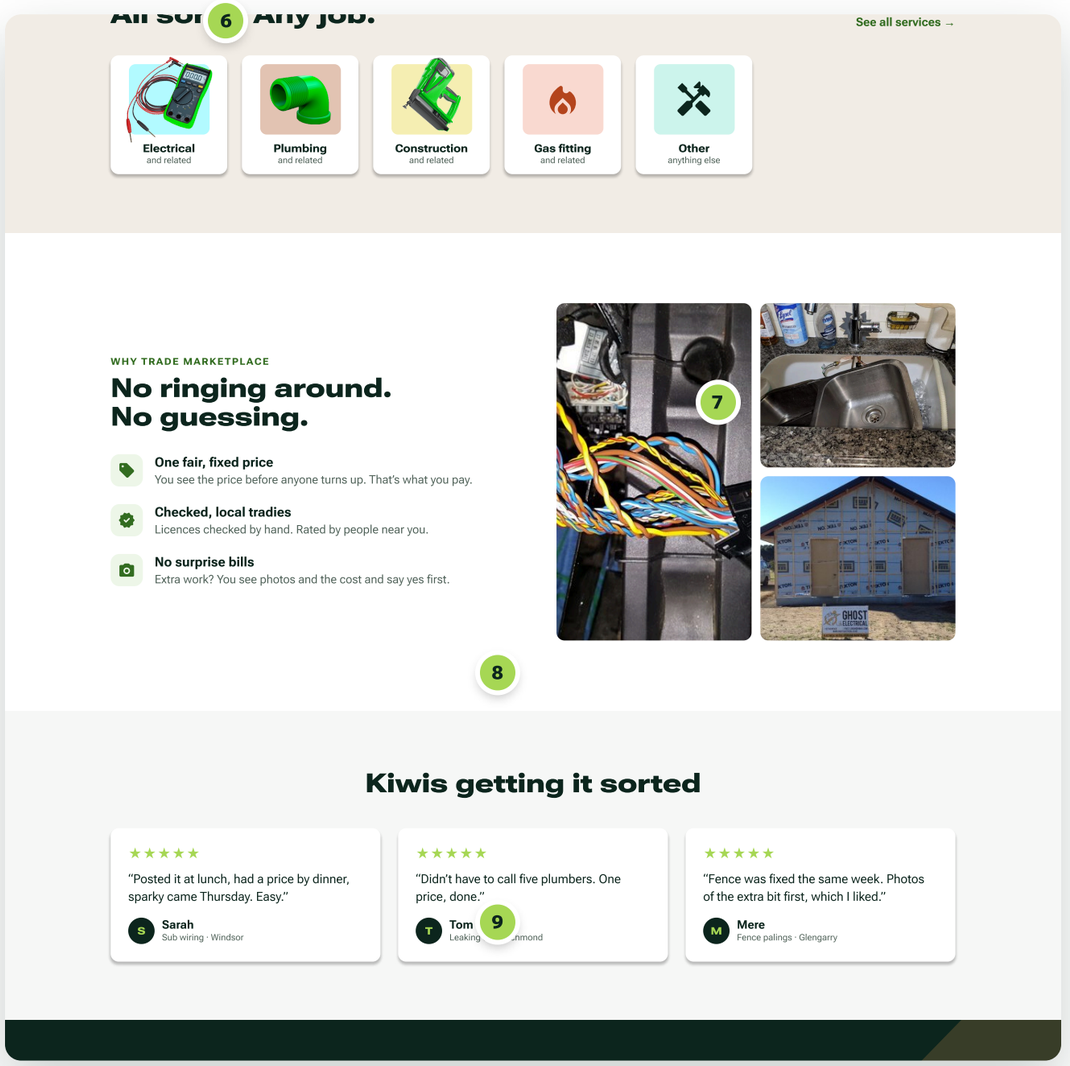
`Claim lost: 0 ms`	M22	`Claim lost: 200 ms`	grey + banner, no shake

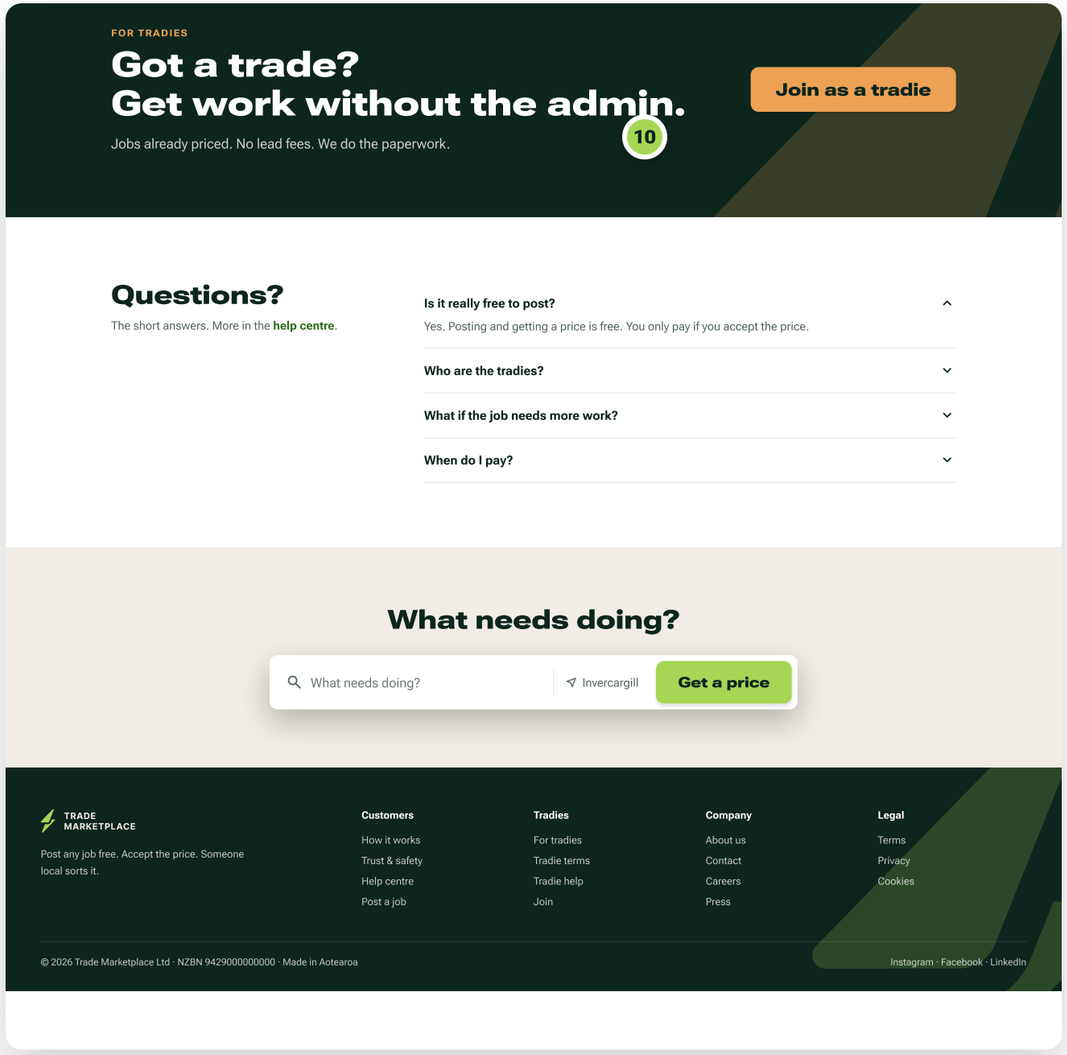
Home / landing (1/2)





Home / landing (2/2)

Continued. Pins are numbered across the whole page.



1. Transparent site nav over the hero. After scrolling past the hero it turns solid Forest with a shadow (M06). “For tradies” in Amber.
2. Hero: 92px Display headline (M07 reveal), one search bar = the main action. Typing + Enter or “Get a price” opens Post a job with the text filled in. Location defaults from the browser (ask once) or IP; editable.
3. Example chips pre-fill the search. Trust row: three facts, no numbers we can’t back up yet.
4. Floating “price ready” card shows the product in one glance. Slight 2° tilt, floats 6px up/down slowly (3s loop, off with reduced motion).
5. How it works: 3 cards, lift on hover (M03). Copy never mentions estimates.
6. Categories: the main trades + “Other”, which means any kind of labour (moving, cleaning, gardening, handyman, assembly, rubbish...). Every tile starts Post a job with that type picked.
7. Why us: 3 promises + photo collage (photos zoom on hover, M03).
8. Reviews: real reviews only, pulled from the database once we have them. Until then, hide this section.
9. For tradies band in trade colours (Amber bolt) → /for-tradies.
10. FAQ accordion (M24) + repeat of the search box before the footer. Footer: 4 link columns, NZBN, socials.

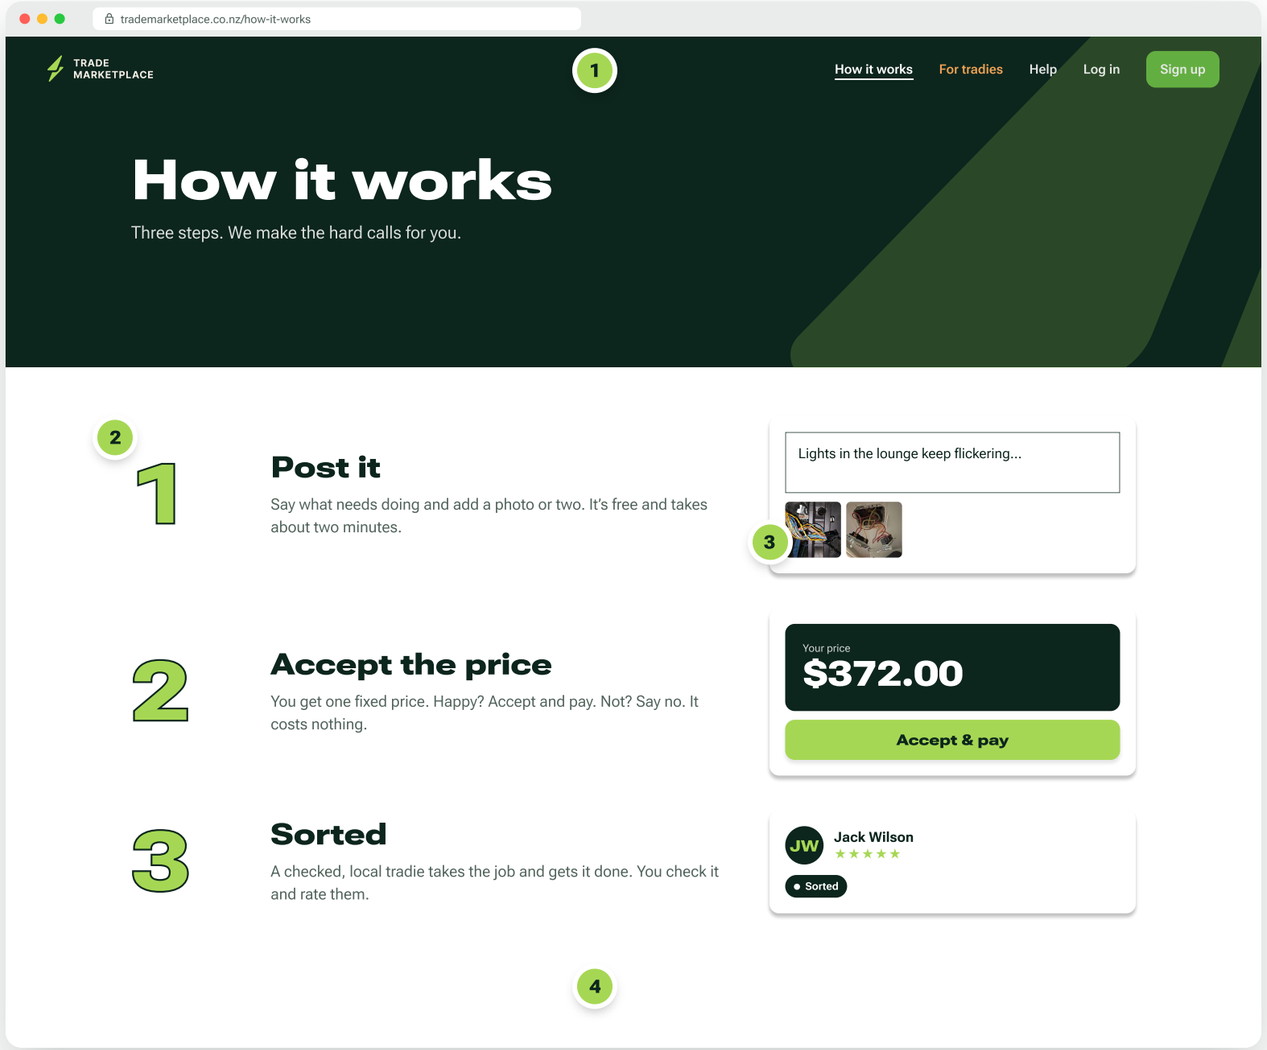
M03 Hover lift
M24 Accordion
M01 Page enter

Inventory: **A01**

04 — PUBLIC SITE `/how-it-works`

How it works



1. Short Forest header (no search). Same site nav (active page underlined).
2. Each step: giant outlined number, short copy, a mini piece of real UI on the right. Rows rise in as they scroll into view (M01, once).
3. Customer-facing: no estimates, margins or pricing maths. Link to Help for the curious.
4. Ends with the same CTA band as the landing (not shown).

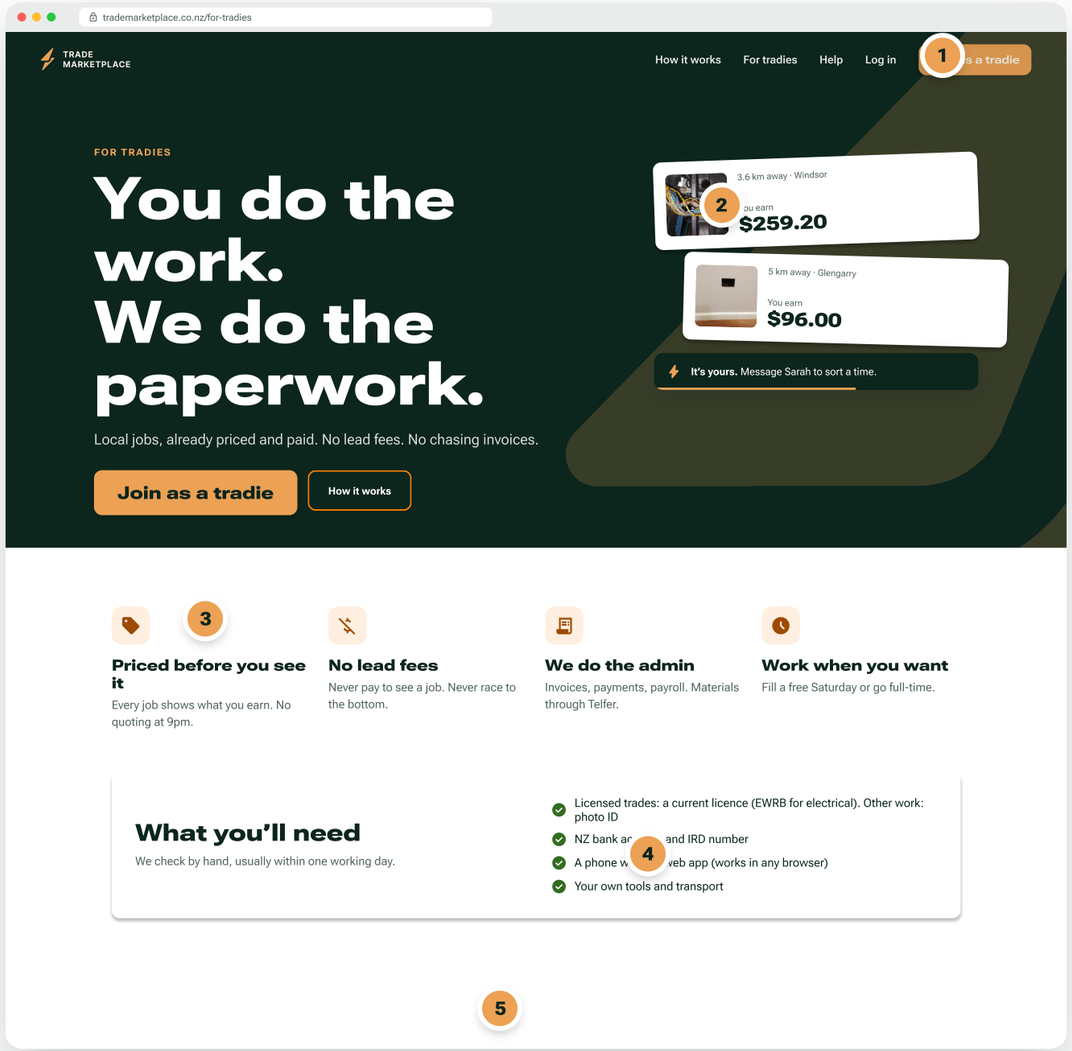
MOTION

M01 Page enter
M03 Hover lift

Inventory: **A02**

04 — PUBLIC SITE `/for-tradies`

For tradies



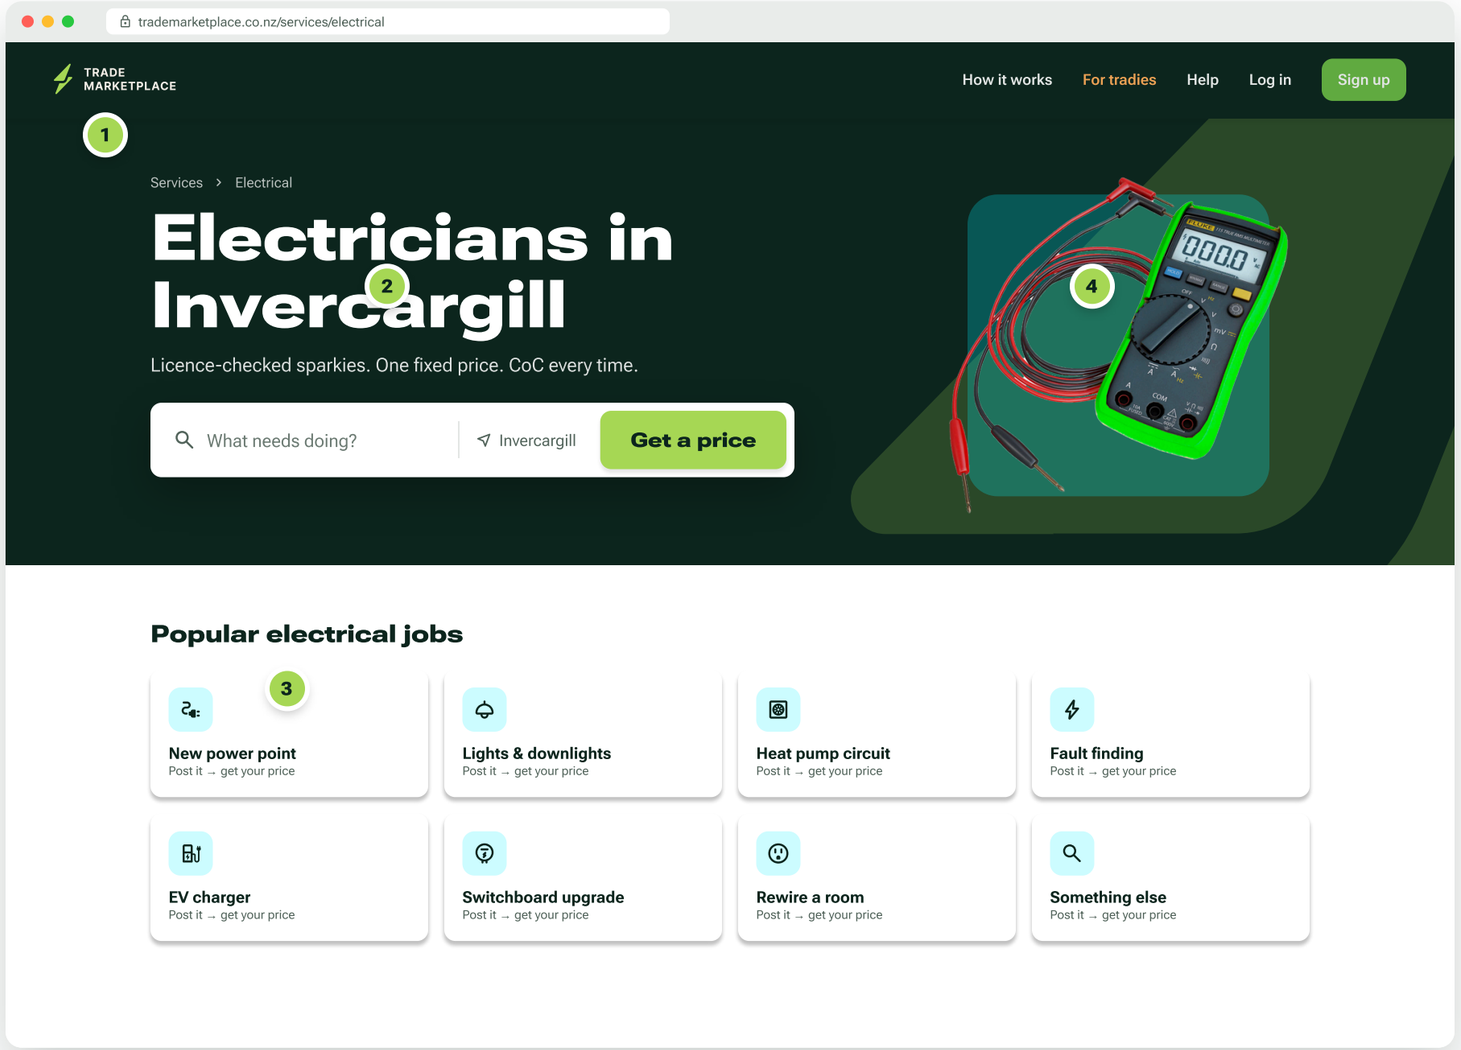
1. Whole page in trade mode: Hi-Vis/Amber accents, Amber bolt. Hero CTA "Join as a tradie" → /signup/tradie.
2. Right side: floating job cards showing "You earn" + an "It's yours" toast. Cards float gently (3s loop); headline reveals with M07.
3. Four reasons in plain tradie talk. Icons in trade tint.
4. Requirements box: the honest list. Licensed trades need their licence; "Other" work (any labour) needs ID only. Pull from the trade config.
5. Below (not shown): earnings example, FAQ for tradies, testimonials from tradies once real, final CTA, footer.

MOTION

`M07` Headline reveal
`M06` Hero bolt parallax + nav fill
`M03` Hover lift

Inventory: `A03`

Service page (template)



1. One template for every trade, including /services/other (“Anything else”: moving, cleaning, gardening, assembly...), and later trade × city (A05). Content from the trade config + CMS.
2. Crumbs + H1 with trade and city for SEO. Same hero search, type pre-set to the trade.
3. Popular jobs grid: each tile starts Post a job with that job pre-filled.
4. If the trade isn’t live yet: hero says “Coming soon” and the search becomes a waitlist form (A07).

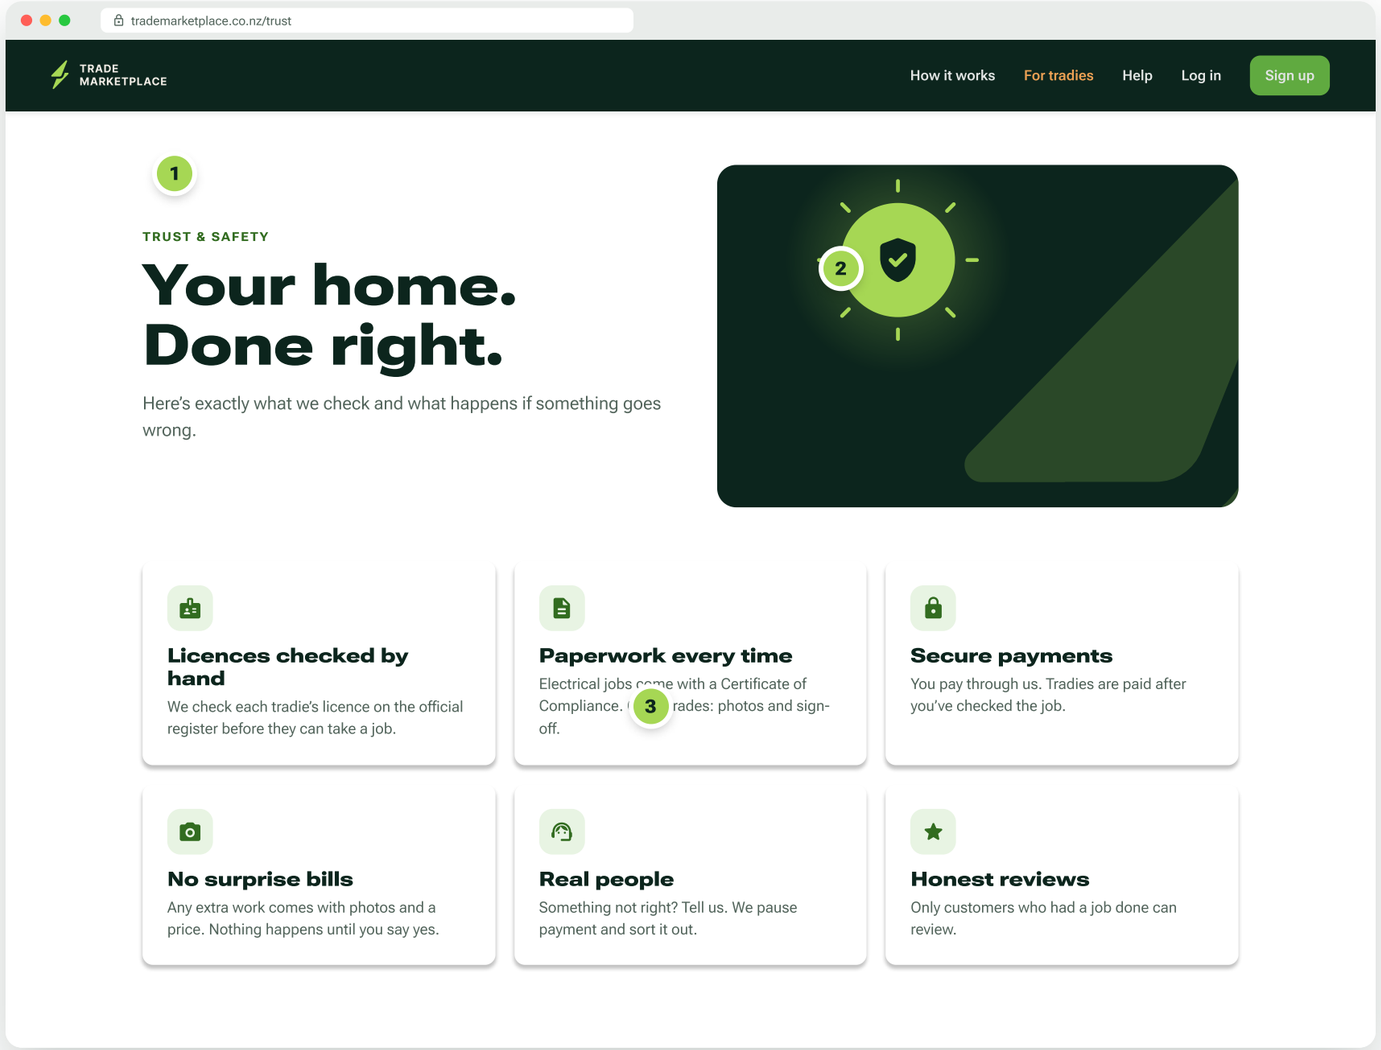
MOTION

M03 Hover lift
M08 Search suggestions

Inventory: **A04** · **A05**

04 — PUBLIC SITE `/trust`

Trust & safety



1. Plain-language trust page. Every claim must be true on launch day (check with Matt).
2. Bolt-flash illustration (M10 plays once on load).
3. Six promises as cards. Link each to its help article.

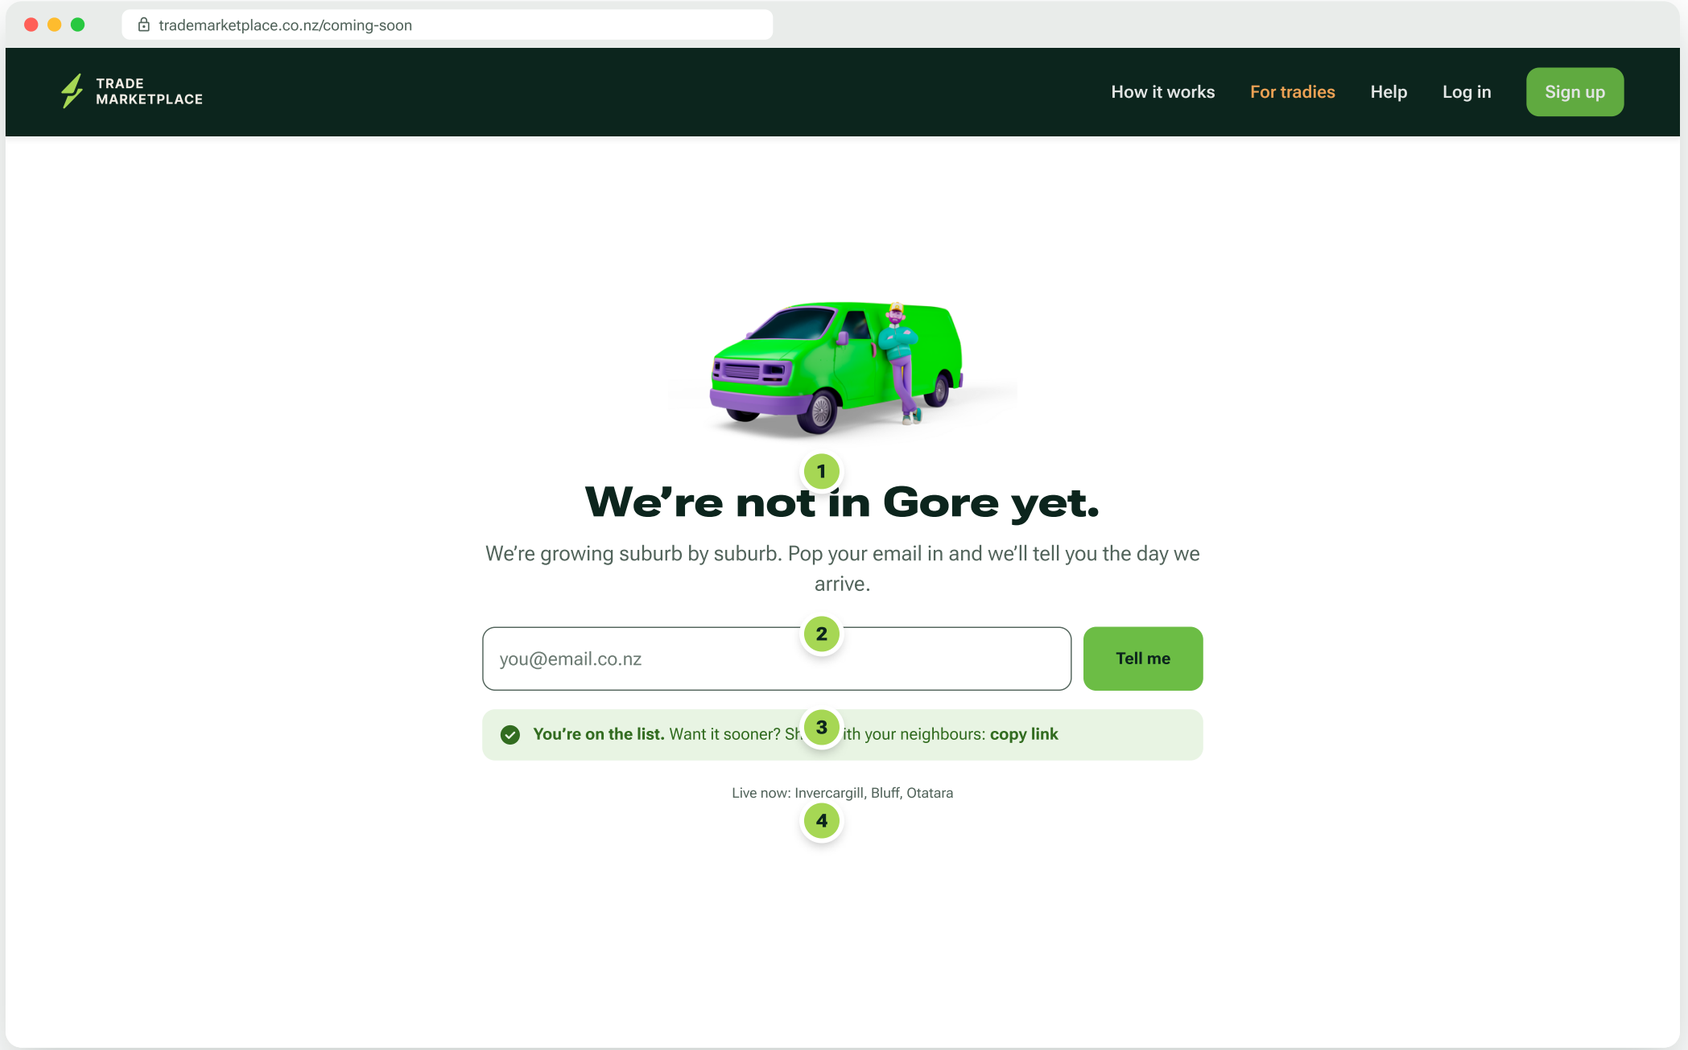
MOTION

M10 Bolt flash
M01 Page enter

Inventory: **A06**

04 — PUBLIC SITE `/coming-soon`

Not in your area yet



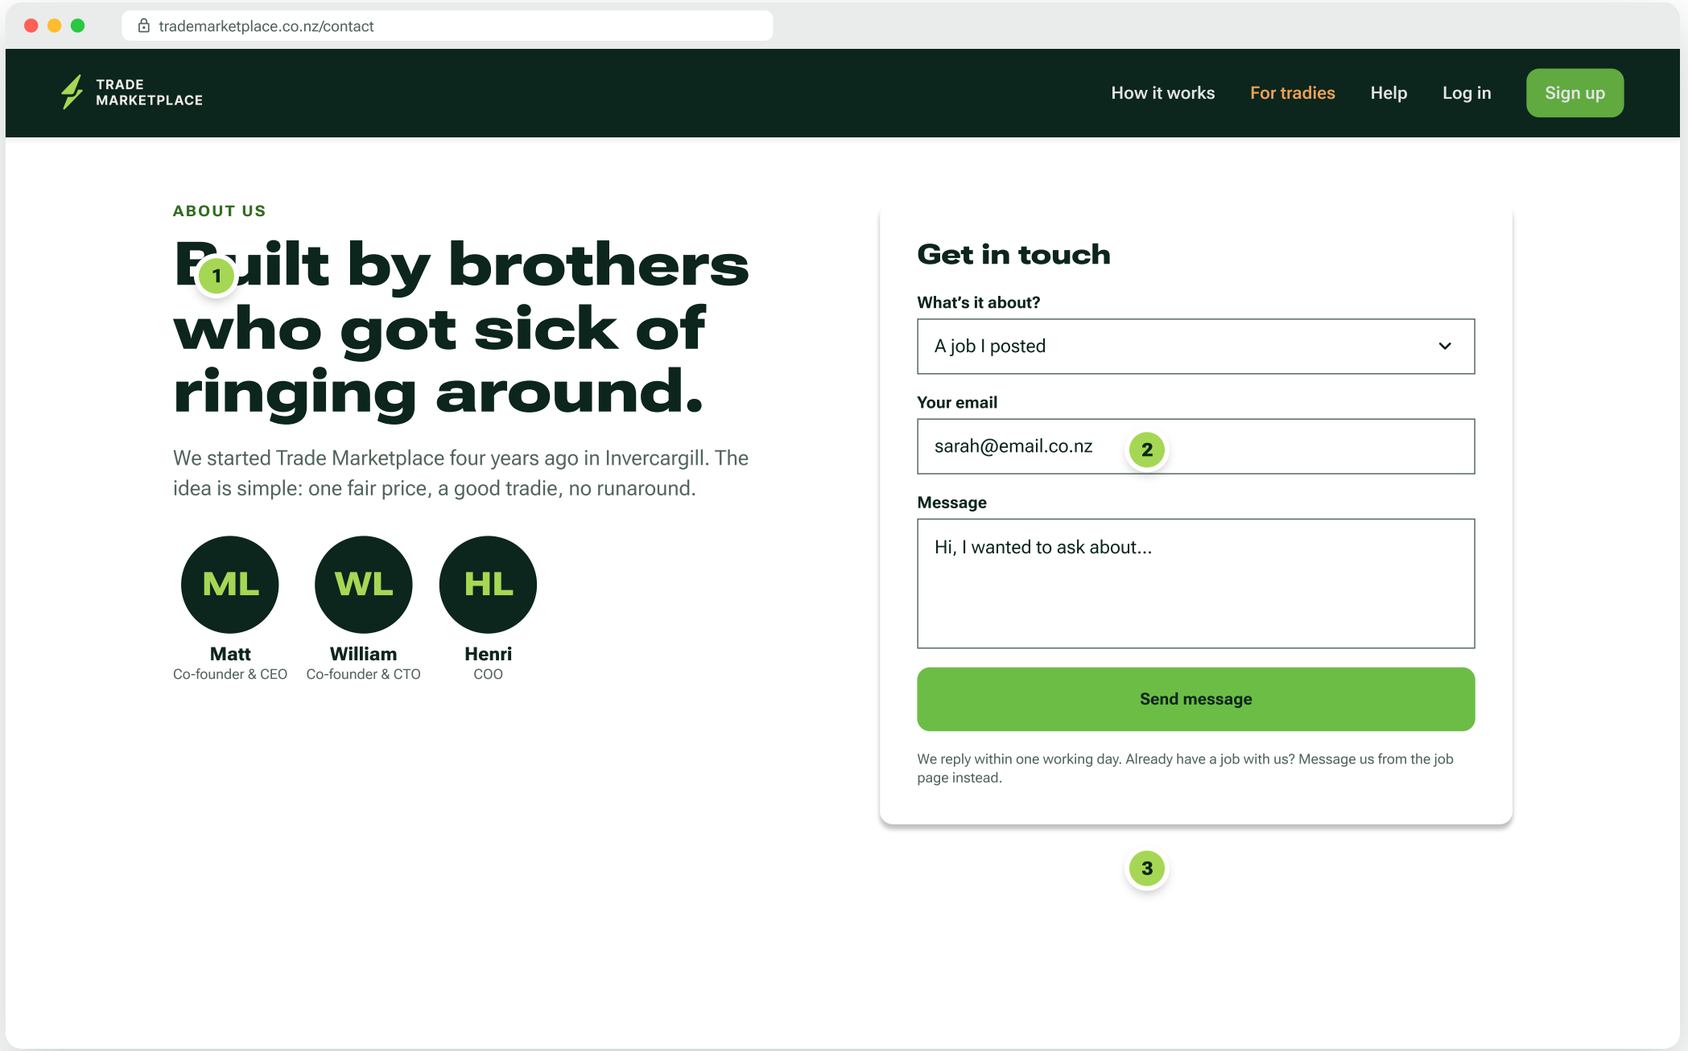
1. Shown when an entered address is outside coverage (on landing, post a job step 3, or a service page). Never let them post a job we can't do.
2. Suburb comes from the address they typed. Email + suburb saved to a waitlist table.
3. Success replaces nothing: a success banner appears under the form (M01) with a share link.
4. List of live areas from coverage settings (F14).

MOTION

M01 Page enter
M14 Toast

Inventory: **A07**

About & contact



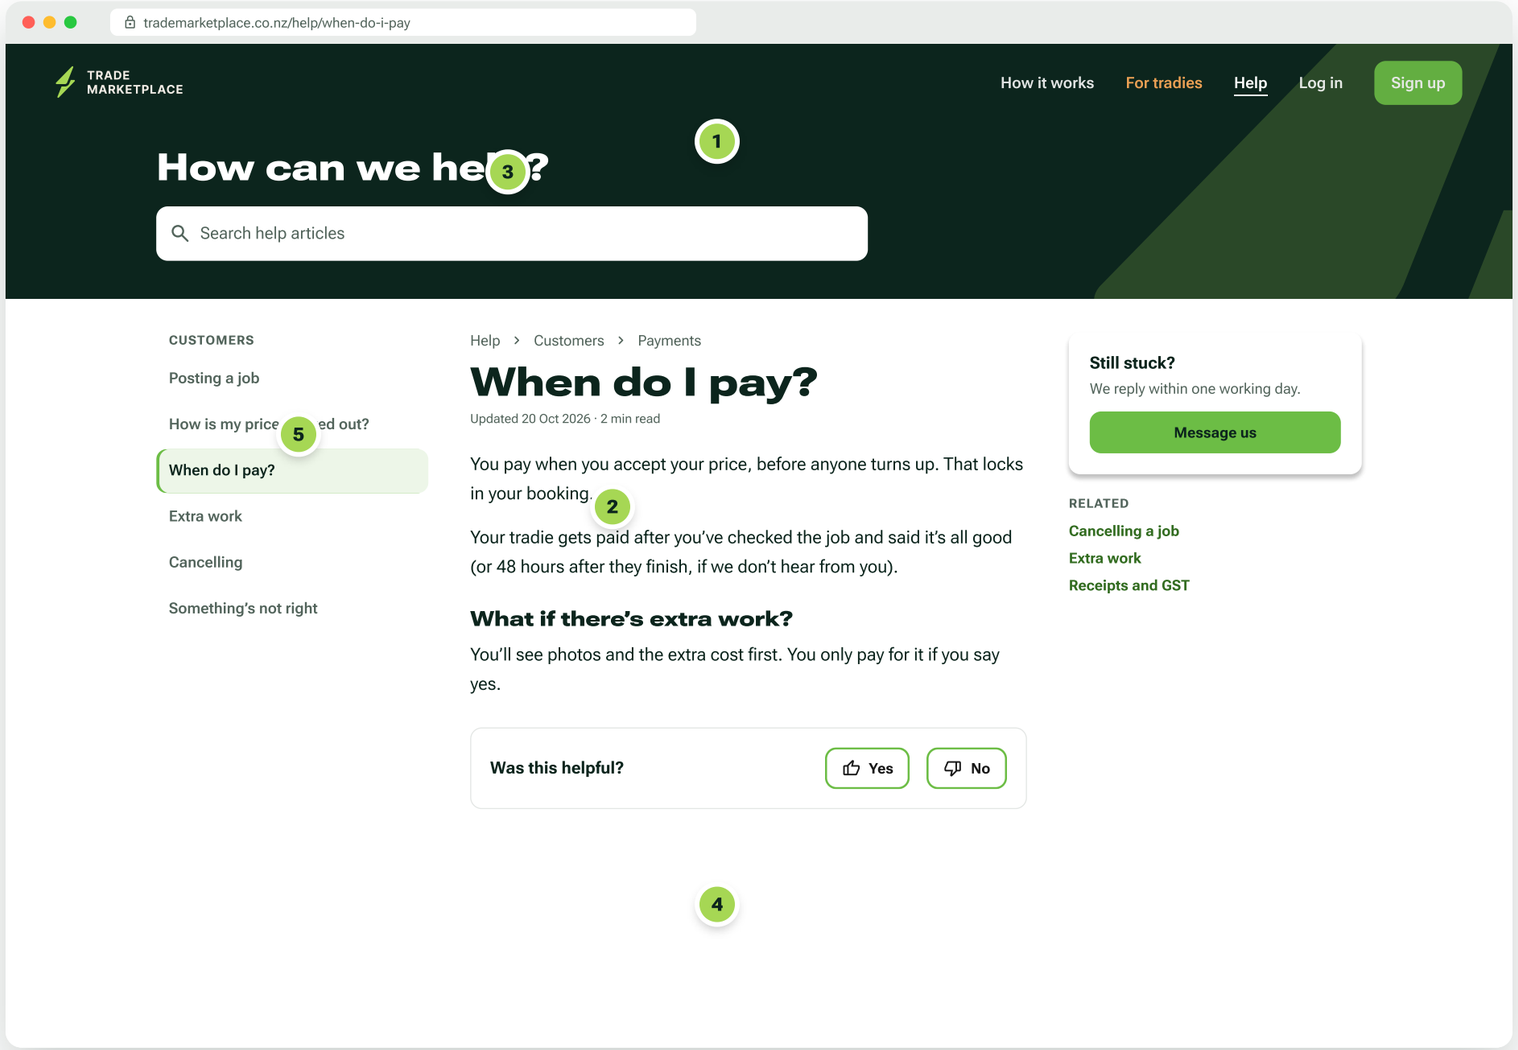
1. About and Contact can be separate pages; same layout pattern. Real founder photos replace initials.
2. Contact form: topic select routes to the office support inbox (F13). Sending / sent / error states.
3. Signed-in users get pointed to their job thread so context isn't lost.

MOTION

M01 Page enter

Inventory: **A08** · **A09**

Help centre + article



1. Help home (not shown) = big search + topic cards (Customers, Tradies, Payments, Account) + popular articles.
2. Article layout: left topic nav, readable column (max 680px, 17px/1.65), right "Still stuck?" + related.
3. Search suggests articles as you type (M08). No results → "Message us".
4. "Was this helpful?" records a vote; No opens a one-line "What were you looking for?".
5. This is where pricing is explained to the curious ("How is my price worked out?"), never in the main flow.

MOTION

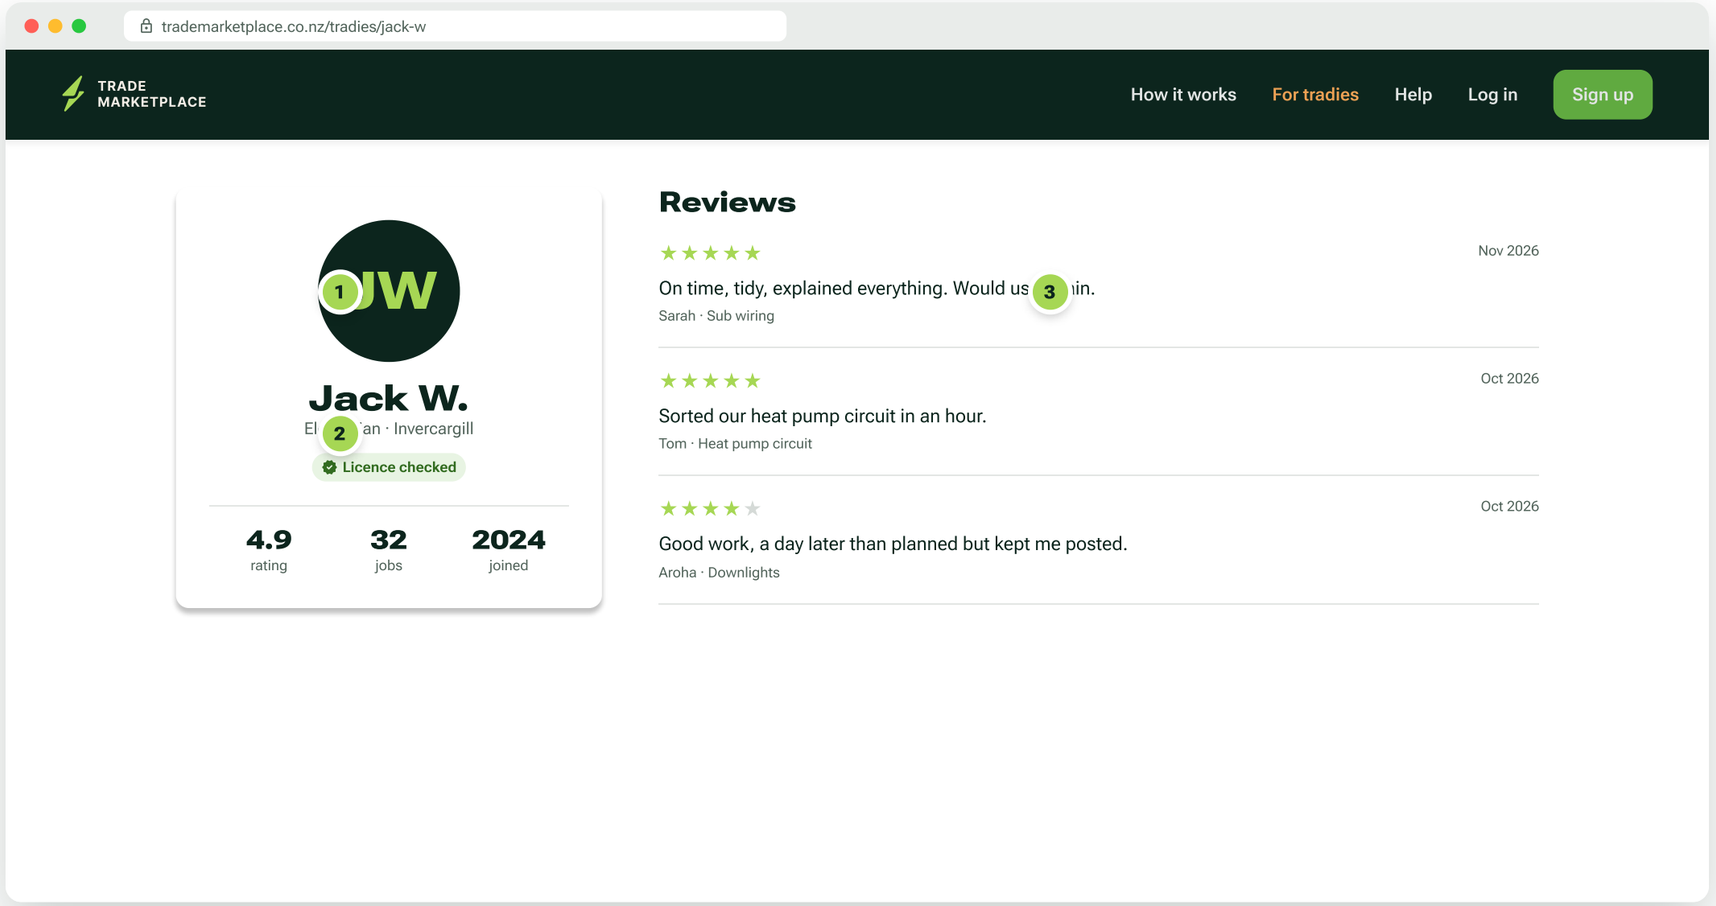
04 — PUBLIC SITE `/tradies/[id]`

Public tradie profile



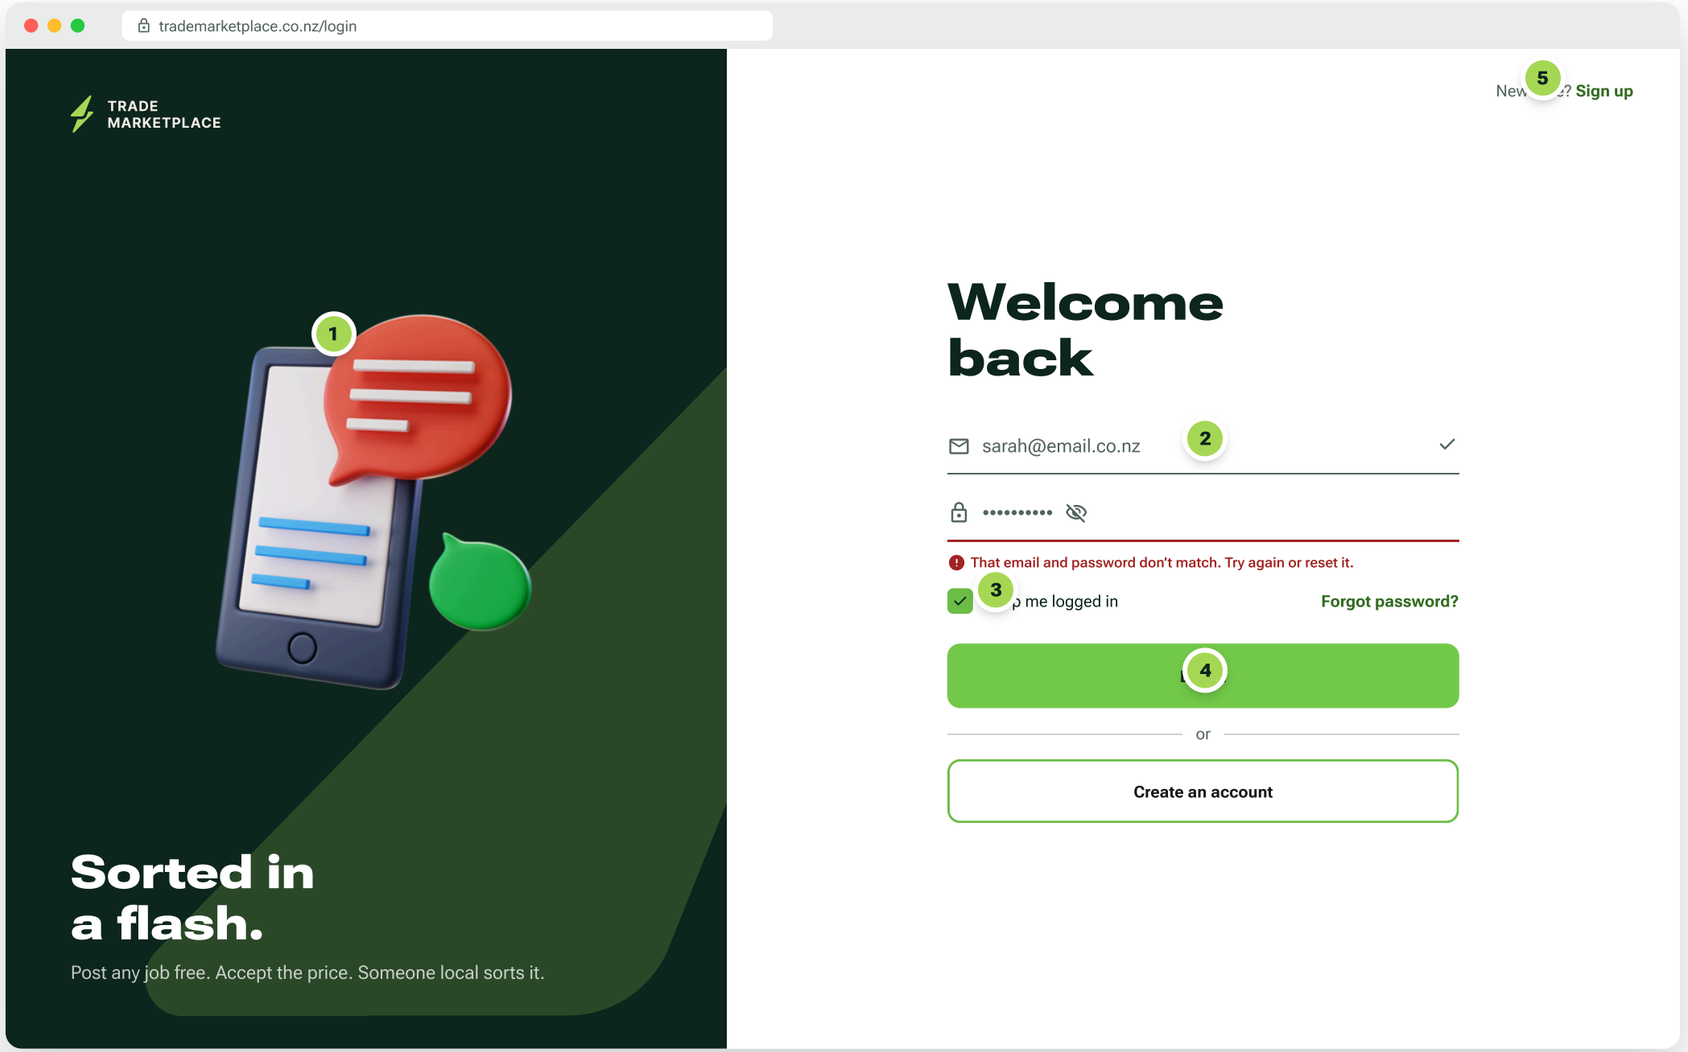
1. First name + initial publicly. No phone, email or exact location.
2. Badges must match what the office actually checked, per trade.
3. Reviews newest first, 10 per page. Paused or removed tradies → 404.

MOTION

M01 Page enter

Inventory: **A12**

Log in



1. Split layout ≥1024: Forest brand panel (bolt, illustration, line) left; form centred in the right half, max 440px. Under 1024: the mobile log-in screen.
2. Underline fields (original style). Error shown under the fields after submit, keeps the email, clears the password. After 5 tries: "Too many tries. Wait 10 minutes or reset your password."
3. "Keep me logged in" = 30-day session, else browser session.
4. Log in button shown in its hover state (brightness 1.06, M04). Enter submits.
5. After log-in: back to the page they came from (?next=), else their home. Mode set from role.

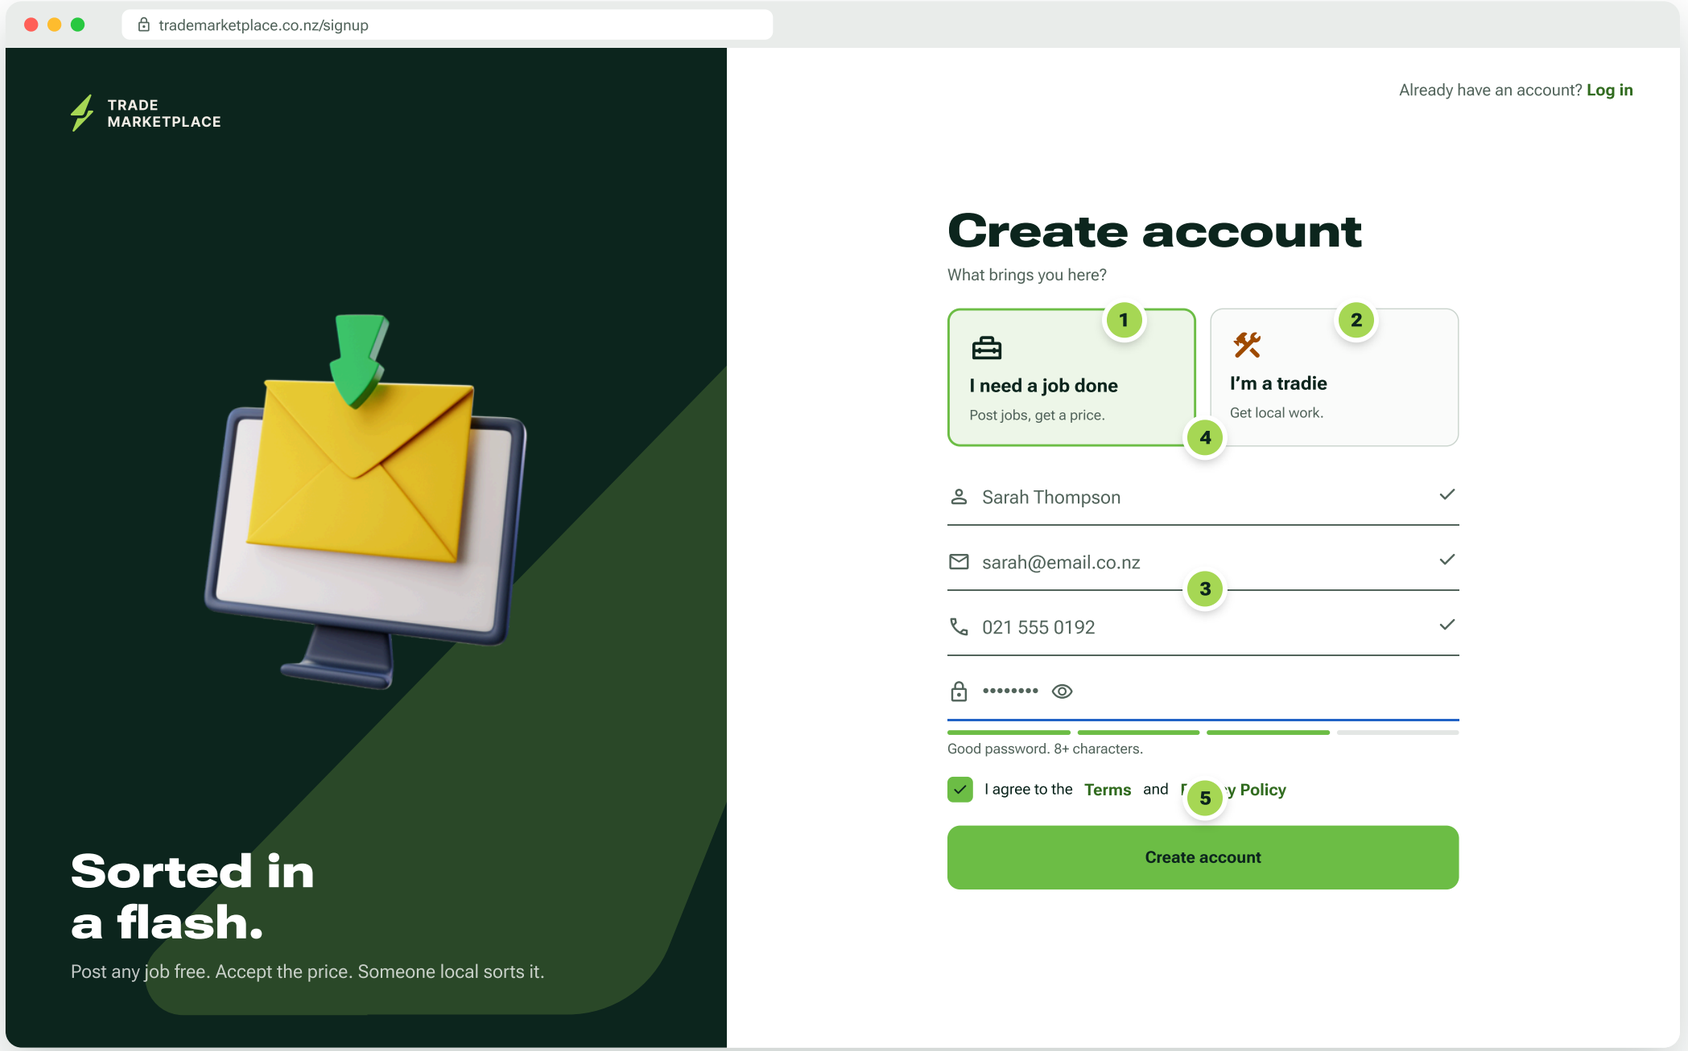
MOTION

M04 Button press
M01 Page enter

Inventory: **B01**

04 — SIGN UP & LOG IN `/signup`

Sign up · choose + details



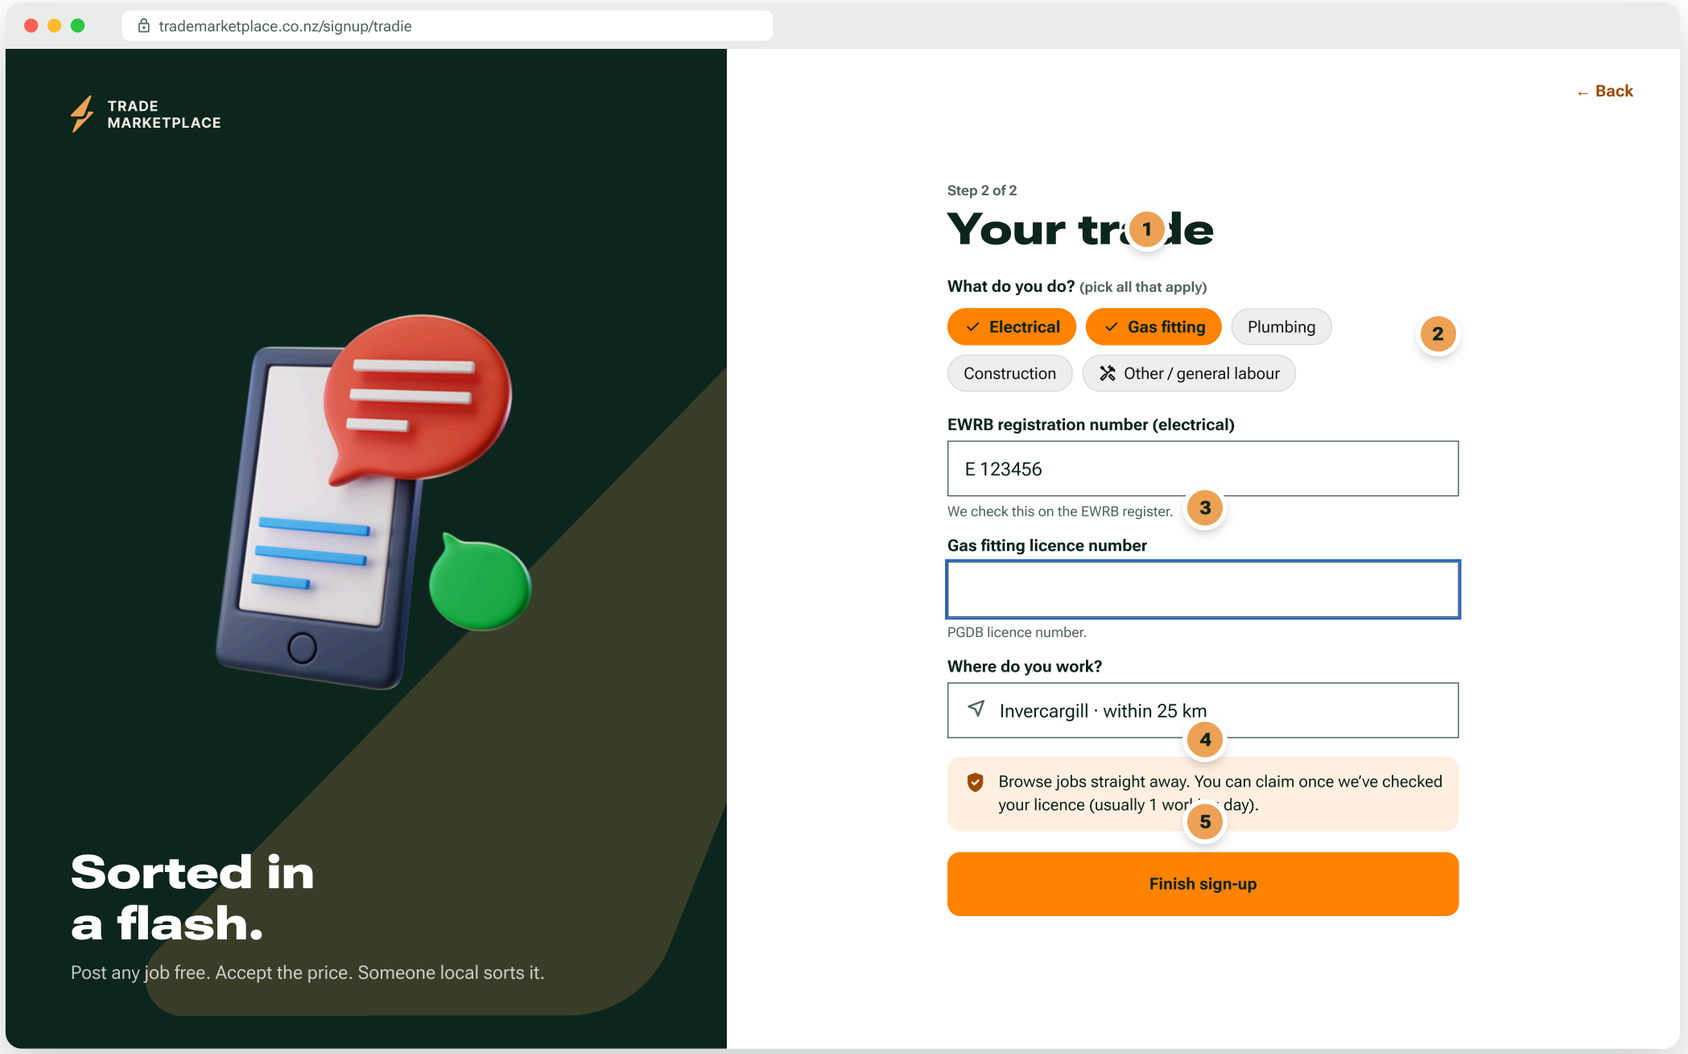
1. Desktop puts the role choice and the details on one screen. Choosing "I'm a tradie" swaps the right side to the tradie form and the page to trade colours (cross-fade 200ms).
2. Choice cards: hover = light fill (shown on the tradie card). Selected = action border + tint.
3. Password strength bar (4 segments) + plain hint. No rules list unless they fail one.
4. Email already used → inline error with "Log in instead?" link.
5. On success → Verify email (B05). If they came from "Post it", the job posts right after verifying.

MOTION

`M04` Button press
`M01` Page enter

Inventory: `B02` · `B03`

Sign up · tradie details



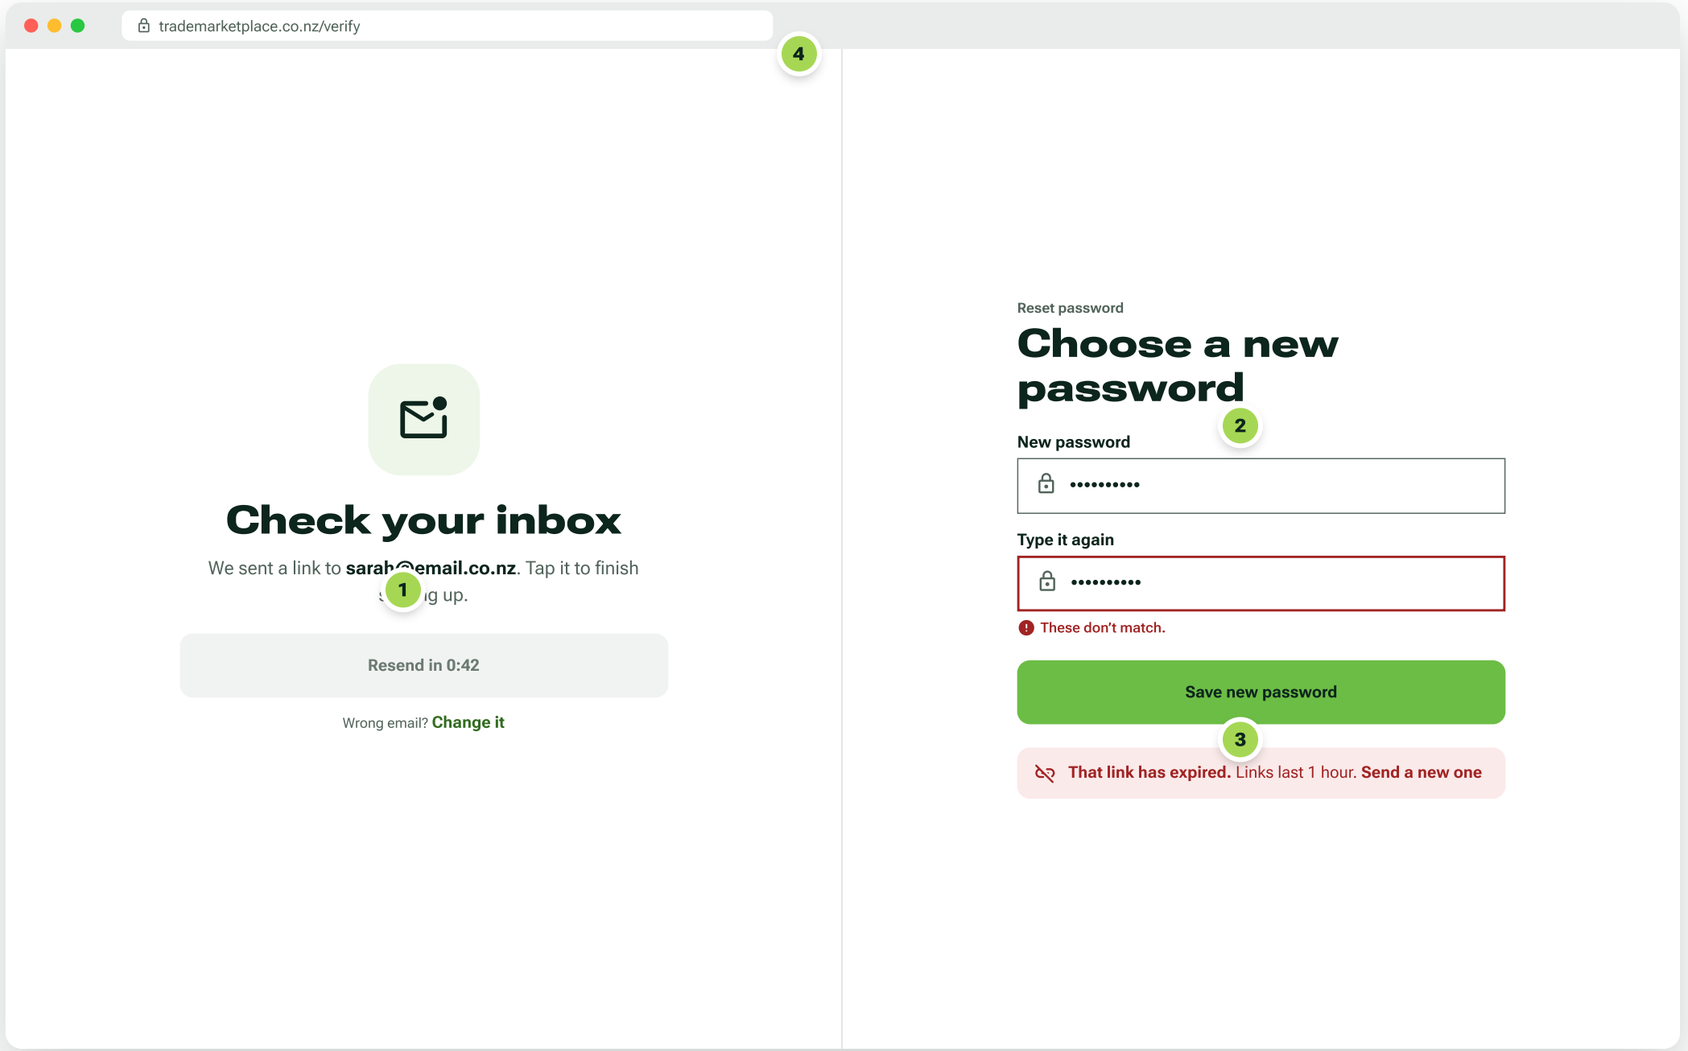
1. Trade mode: Hi-Vis buttons, Amber signature, #9E4A00 links, Amber bolt on the left.
2. One licence field appears per licensed trade picked (label + format from trade config). "Other / general labour" needs no licence: we check photo ID instead.
3. Area: suburb autocomplete + radius (10/25/50 km).
4. Honest about verification: can browse now, claim after checking.
5. Next: Verify email → Setup checklist (D01).

MOTION

M01 Page enter

Inventory: **B04**

Verify email · reset password



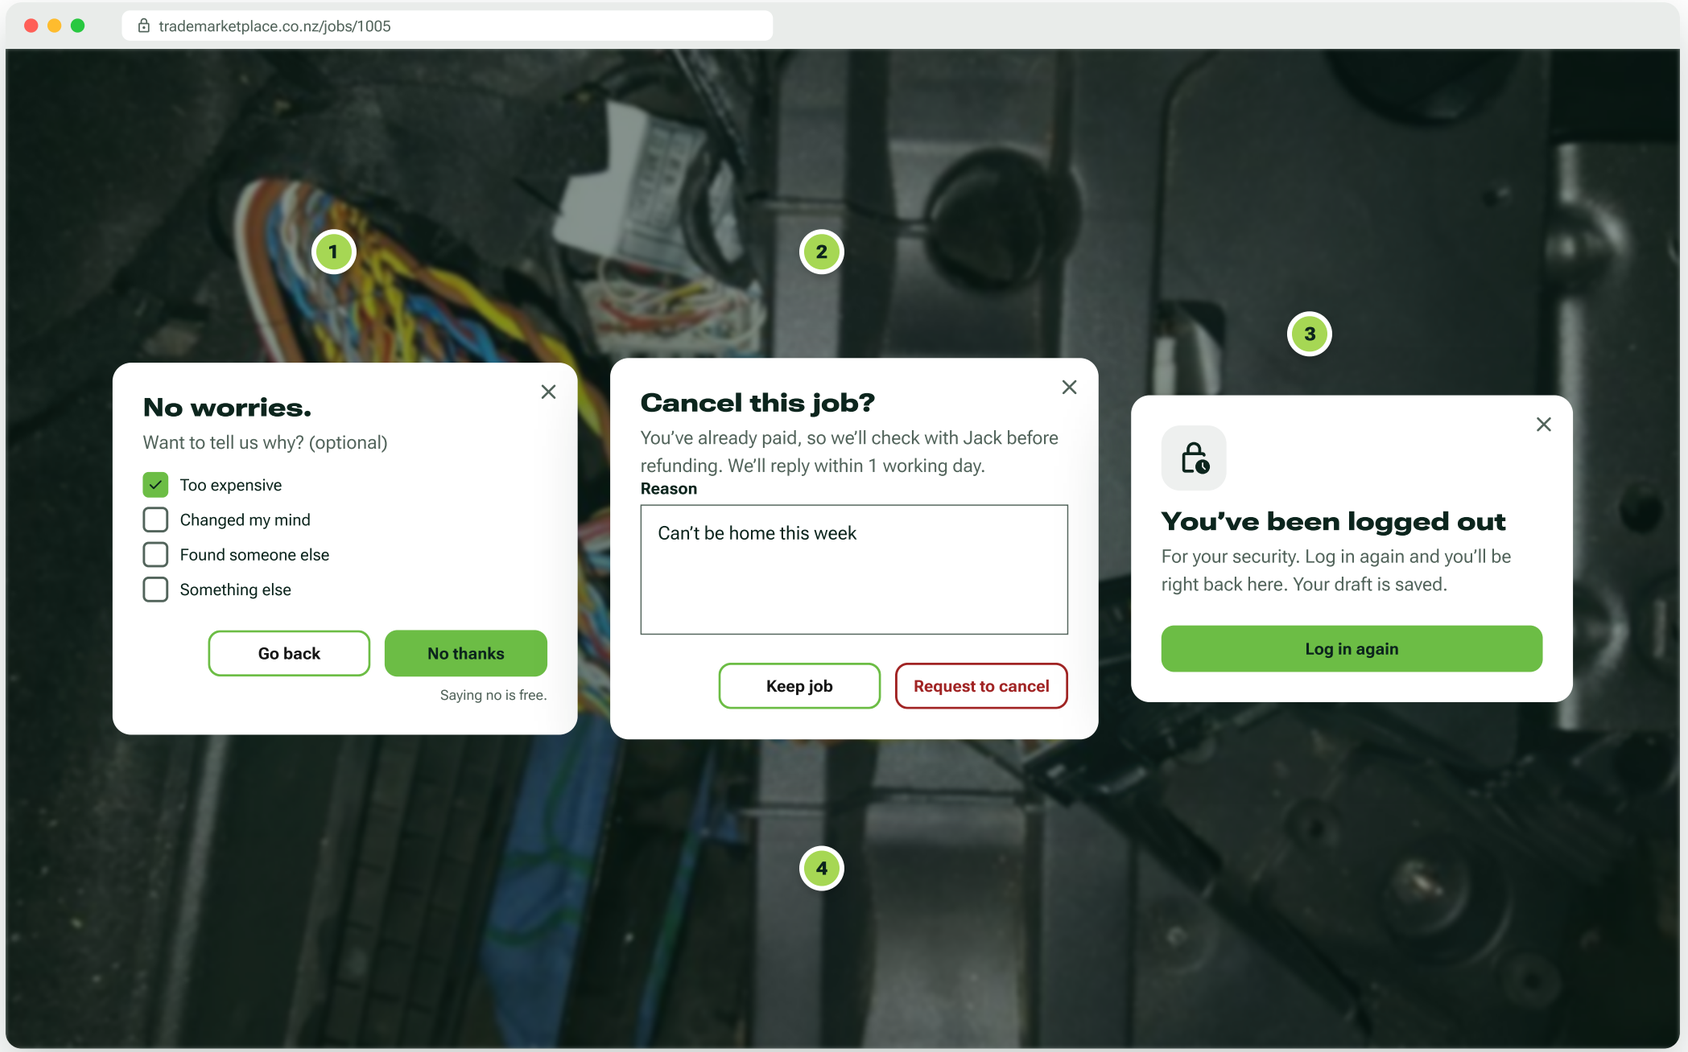
1. Left: verify-email holding page. Resend button disabled with a live countdown (60s). Once verified (link clicked in any tab), this page moves on by itself (poll every 5s).
2. Right: reset password (from /recovery link). Two fields, match check on blur.
3. Expired/invalid link state shown as a banner with a one-tap fix.
4. Both pages are simple centred cards on white with no app nav (the user isn't fully in yet).

MOTION

M01 Page enter

Inventory: **B05** · **B06**

Dialogs



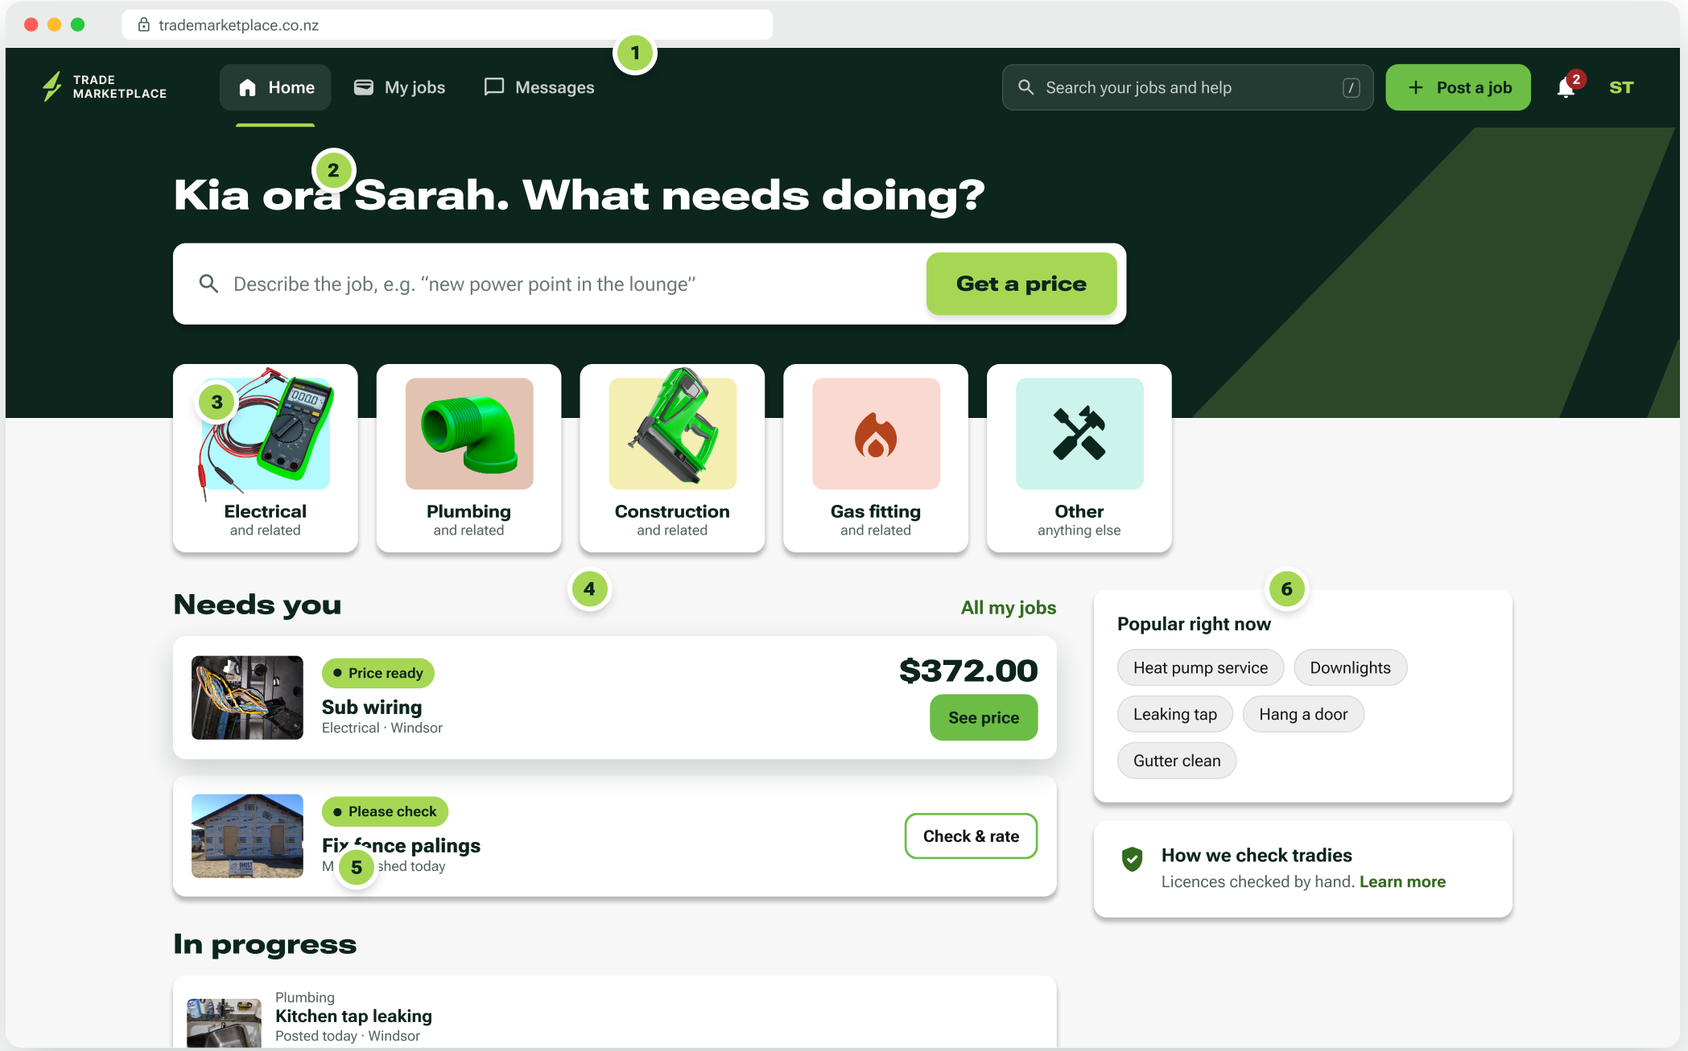
1. Decline price (C09): reasons optional, primary is the decline itself. "Saying no is free."
2. Cancel job (C17): before payment = simple confirm, free. After payment = request with reason (Danger button), office reviews.
3. Session expired (B07): dialog over the page; logging in returns to the same page; drafts kept.
4. All dialogs: 16px radius, scrim 50%, M13 animation, focus trapped, Esc closes (except session expired), focus returns to the trigger. Max one dialog at a time.

MOTION

`M13` Dialog

Inventory: `B07` · `C09` · `C17`

Customer home



1. App nav (Forest, 68px): Home · My jobs · Messages, search (press / to focus), “Post a job” button, bell, avatar menu. Active tab has a Lime bar that slides (M16).
2. Greeting + one big “What needs doing?” box. Enter → Post a job with text.
3. Category tiles straddle the band edge (brand device). Hover lift (M03).
4. “Needs you” = only jobs waiting on the customer (price ready, please check, extra work). Card shown in hover state. Hidden when empty.
5. “In progress” = everything else active. New users see an empty state with the 3 steps instead.
6. Right column: popular job chips (pre-fill search) and a trust card.

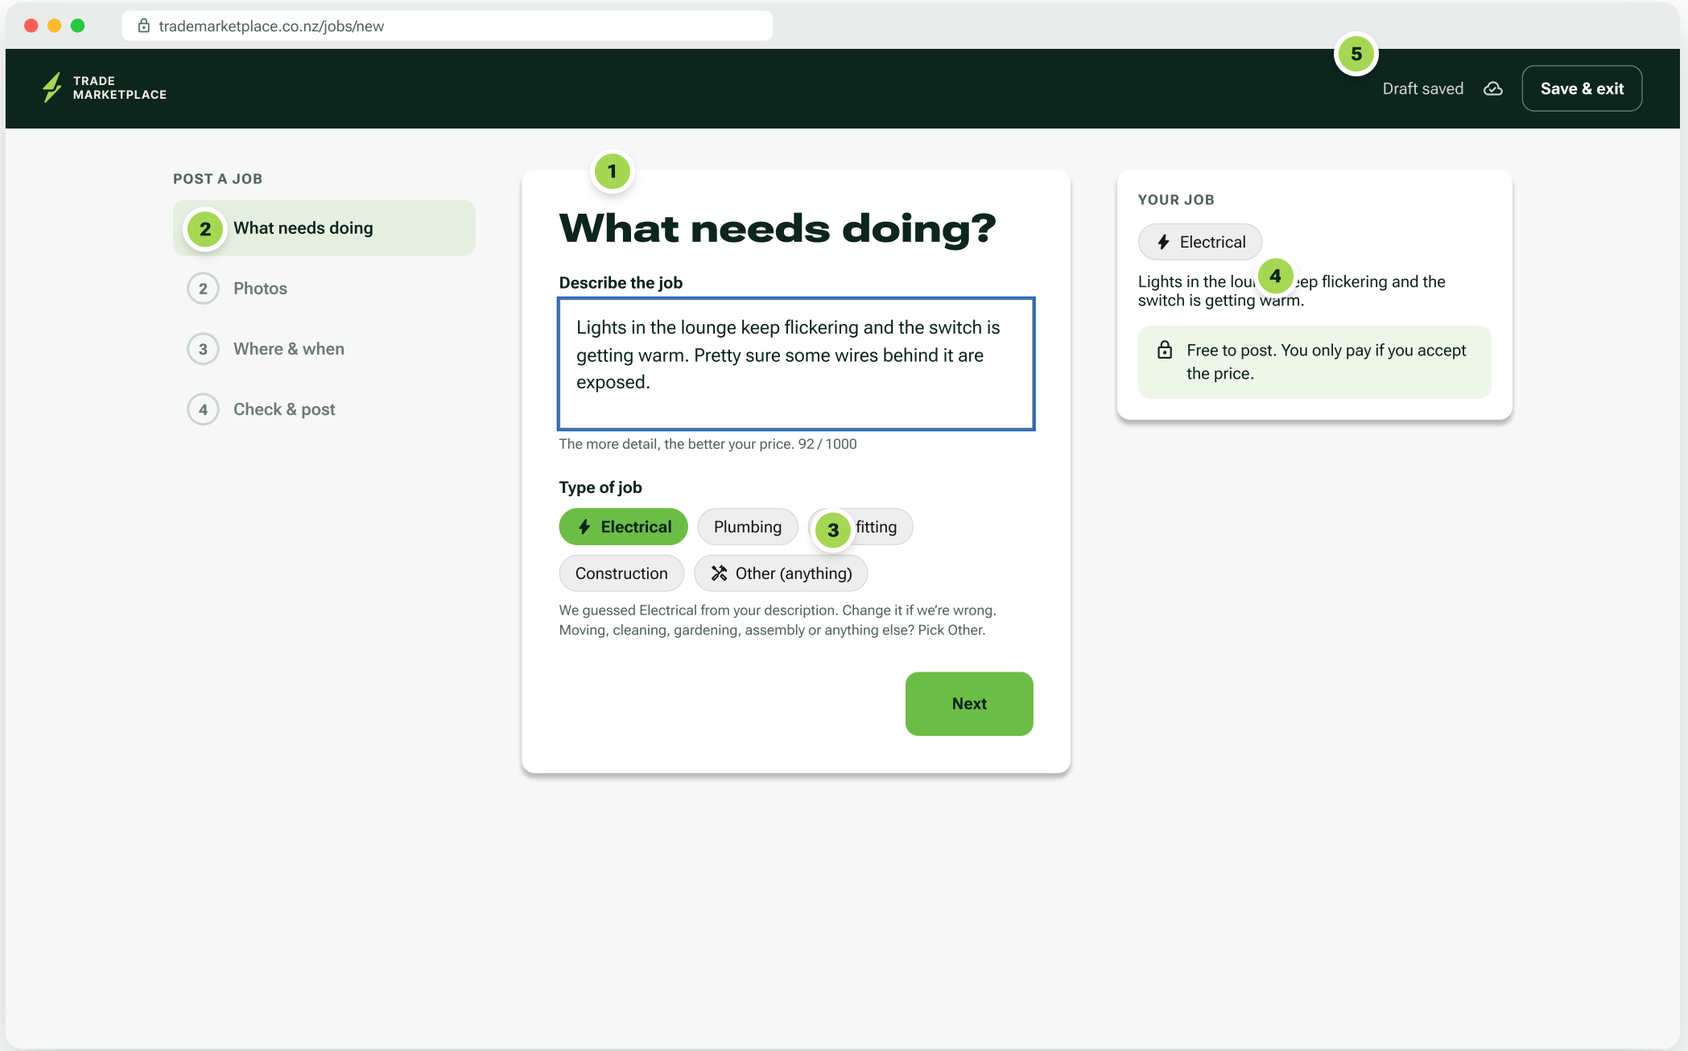
04 — CUSTOMER APP `/jobs/new`

Post a job · describe



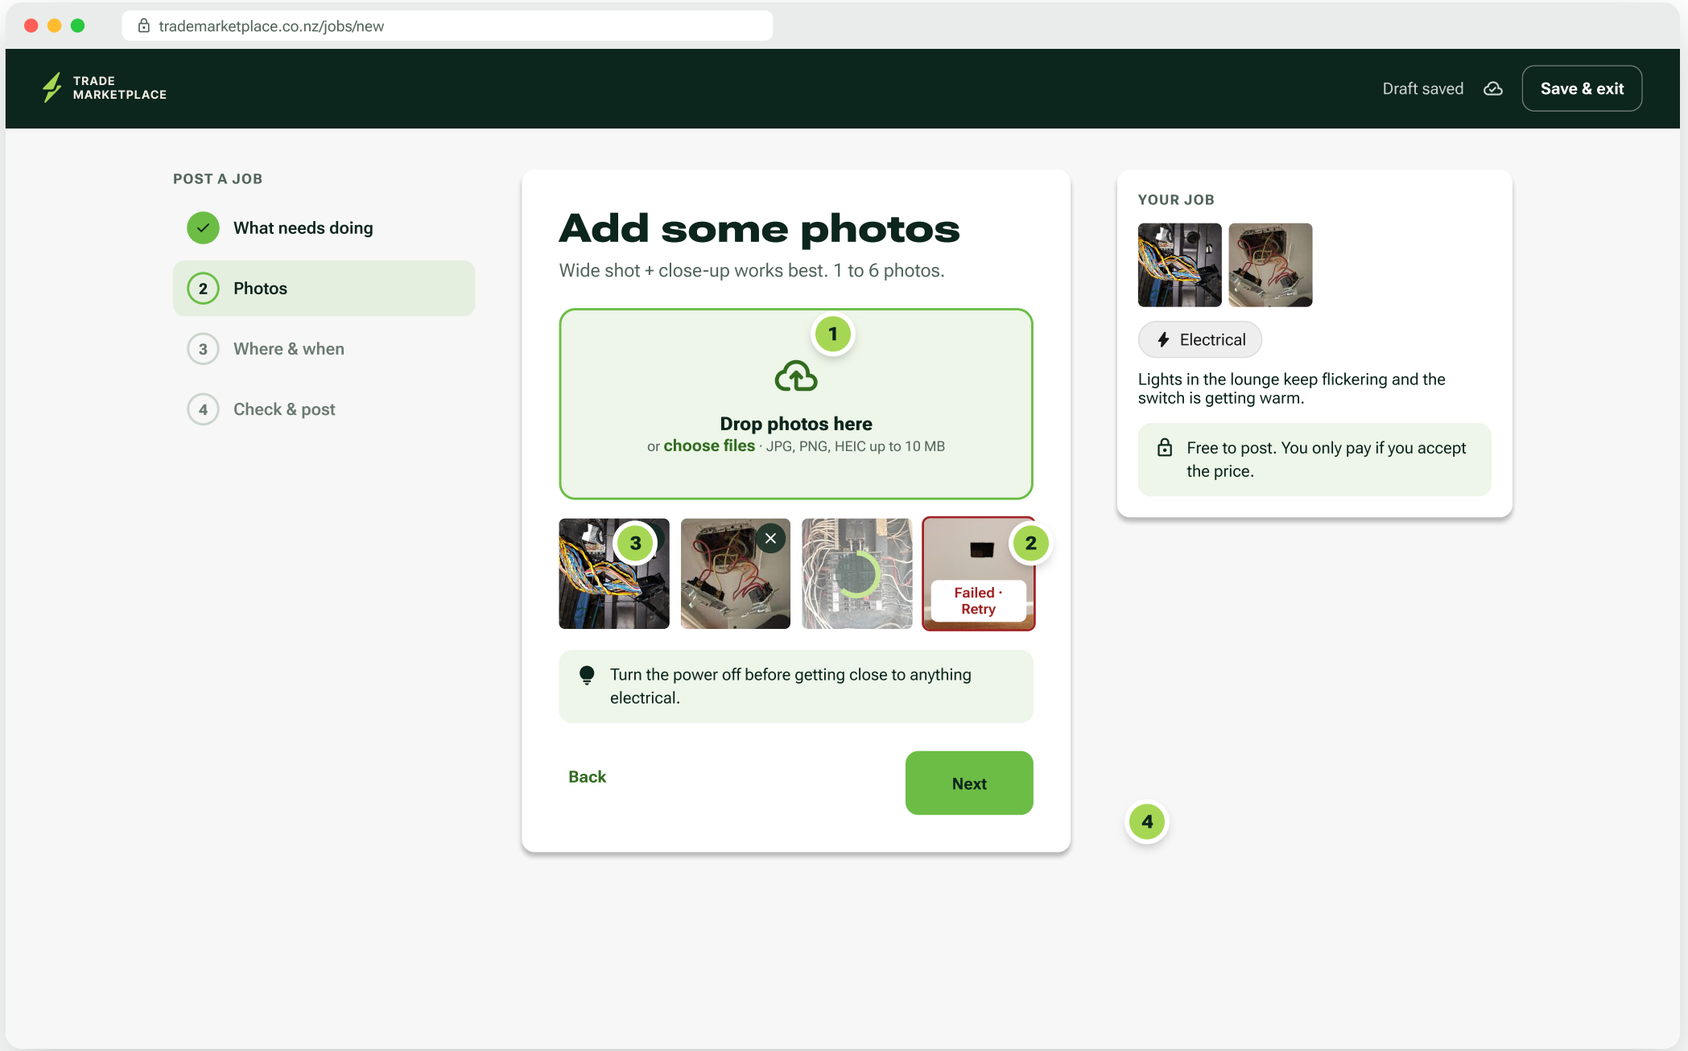
1. Full-page wizard, focused: slim nav with "Draft saved" + Save & exit. No main nav while posting.
2. Steps rail: done = action tick, now = tint. Clicking a done step jumps back.
3. Type guessed from the words typed (simple keyword match), always editable. Main trades + Other: Other covers any labour, and "not sure" goes there too (the office re-types it if needed).
4. Live summary on the right fills in as they go. Free-to-post reassurance.
5. Draft autosaves (sessionStorage now, server draft when signed in).

MOTION

M01 Page enter
M11 Tracker progress

Inventory: **C02**

Post a job · photos



1. Drop zone shown in its drag-over state (M26): solid action border + tint.
2. Each photo uploads straight away: progress ring (M18), × to remove (with Undo toast), failed = red outline + Retry.
3. Photos can be reordered by drag; the first is the cover.
4. Next waits for uploads to finish (button shows “Uploading 1…”).

MOTION

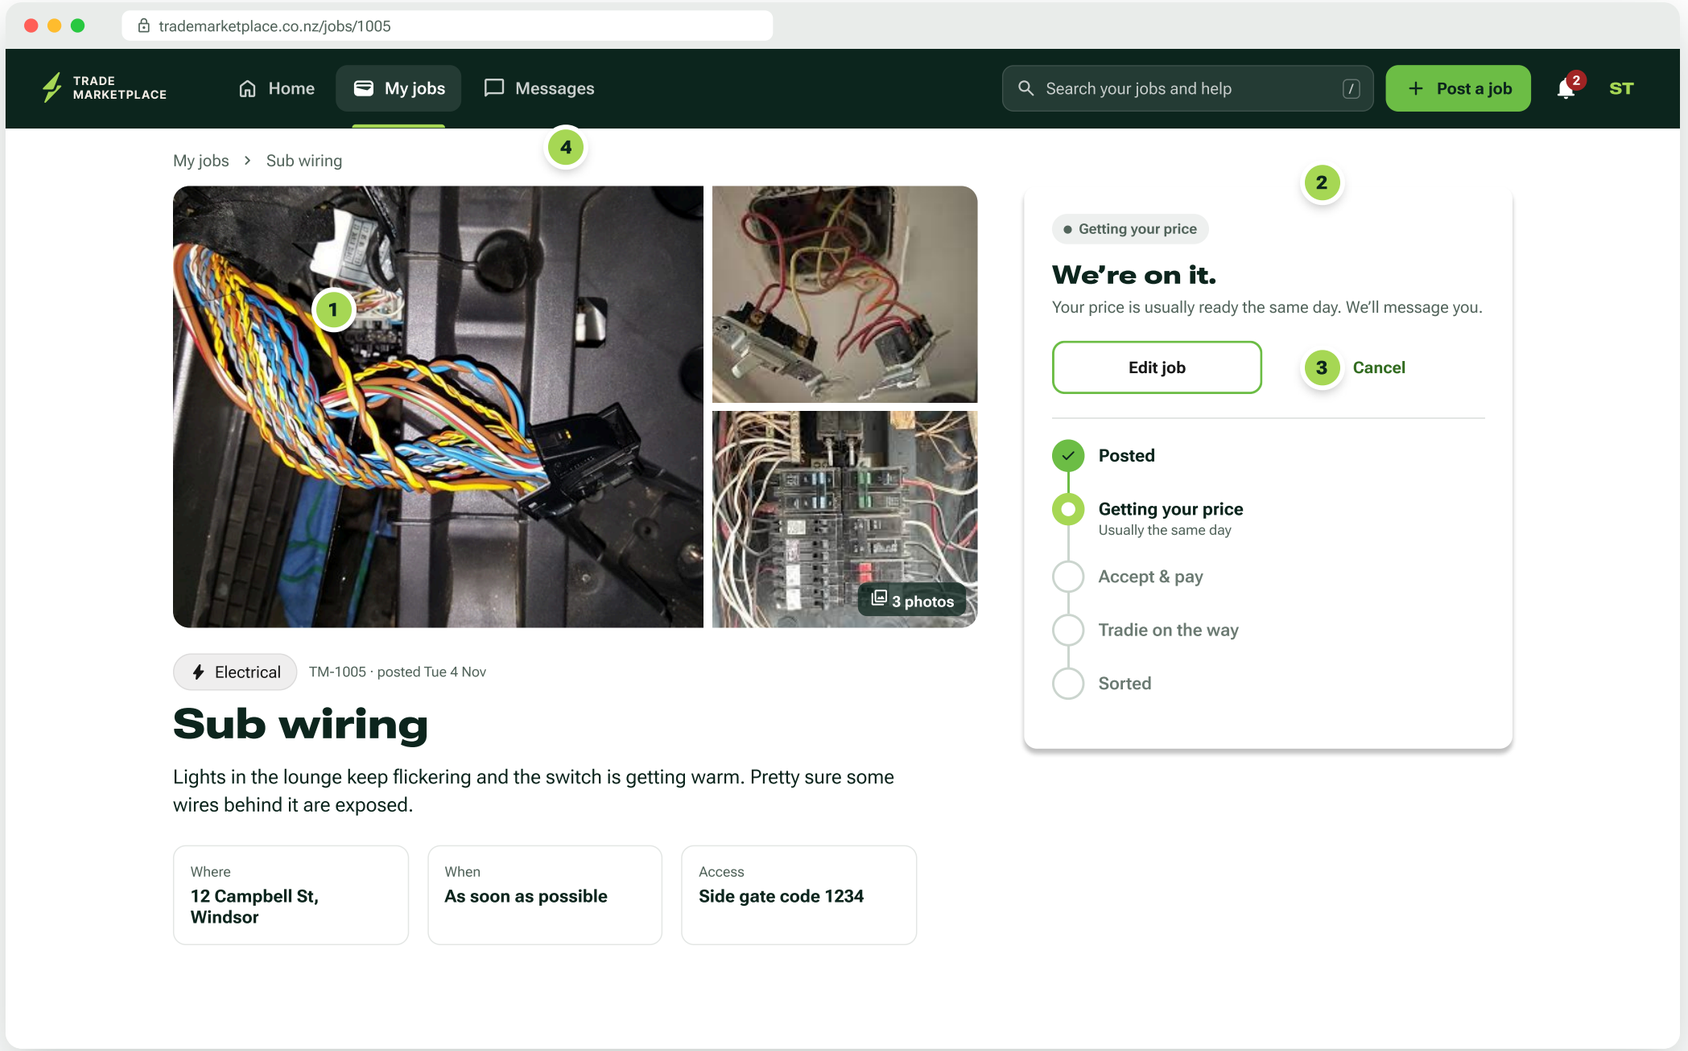
Inventory: **C06**

Job · getting your price



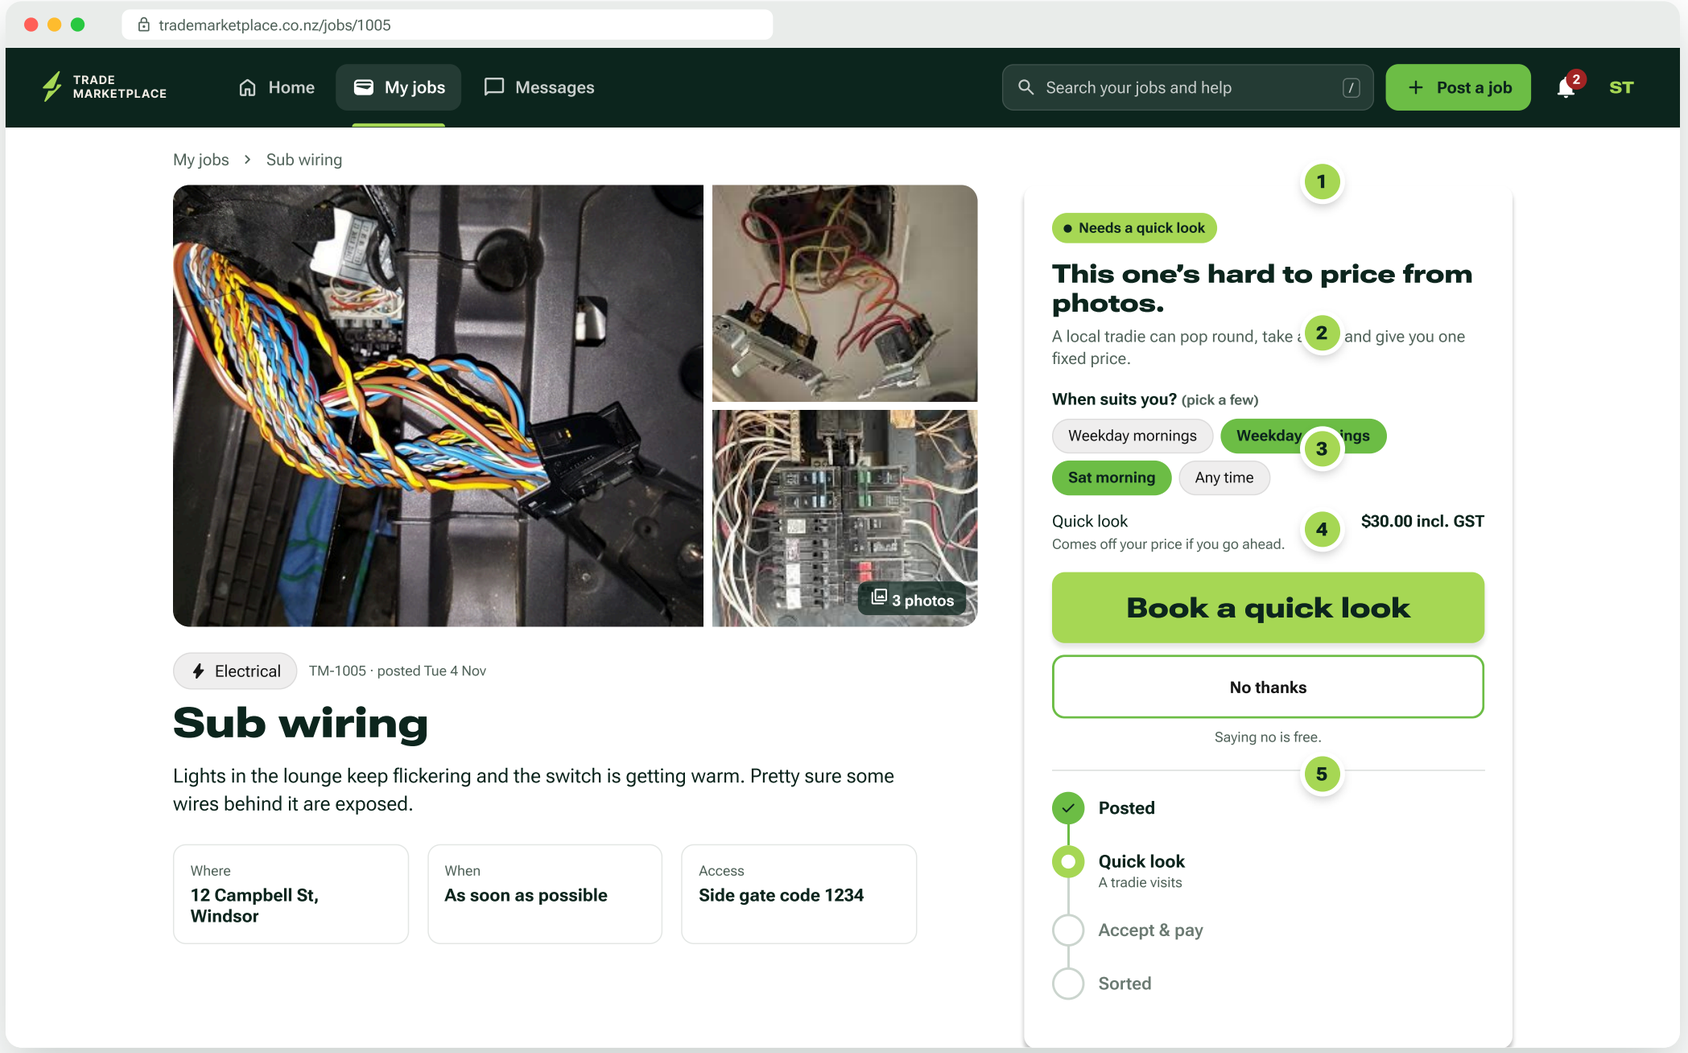
1. Desktop job page: left = gallery (click opens full-screen viewer, arrow keys), job details, info cards. Right = sticky status card (420px).
2. Status card: pill, one line of what's happening, actions, tracker. Same card in every state; only its middle changes.
3. Editing is allowed until priced. Cancel is free here (simple confirm).
4. Gallery photo zooms slightly on hover (M03).

MOTION

M02 Route transition
M03 Hover lift
M25 Status change

Inventory: **C07**

Job · needs a $30 quick look



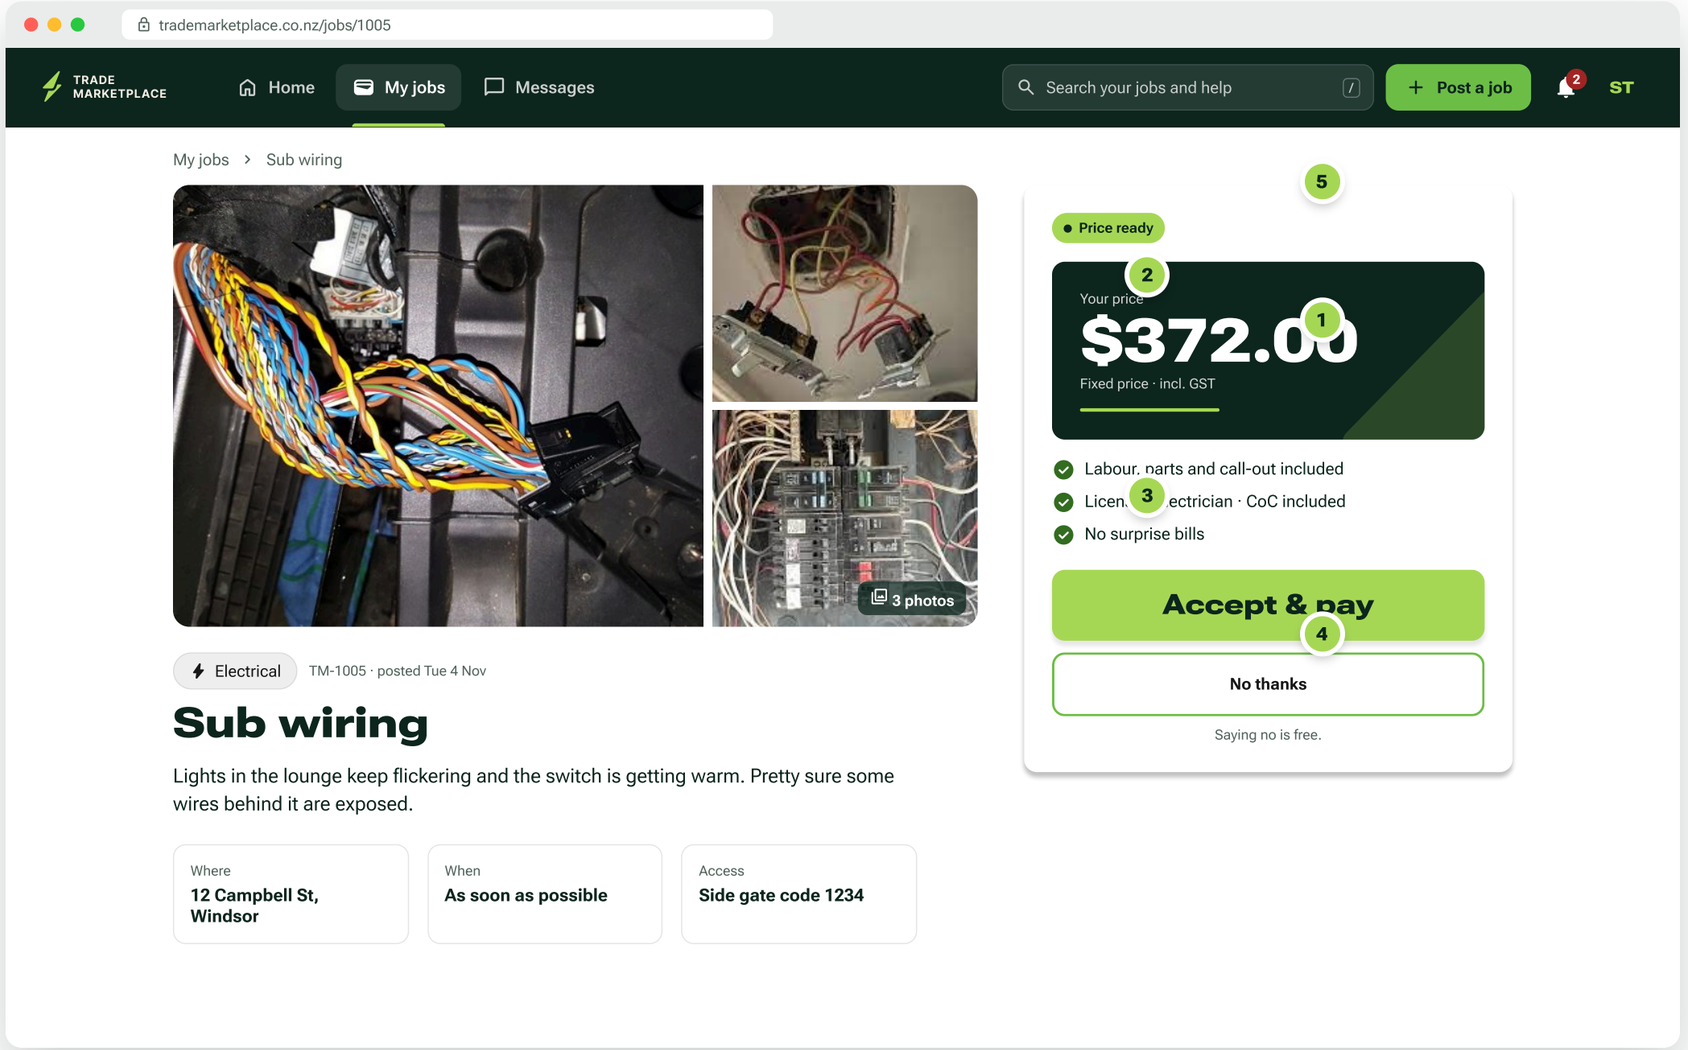
1. Shown when the Trade Marketplace AI can't settle a price from the photos and estimates. New status needed in the code (QUOTE_BOUNTY).
2. Plain words, no machinery: "hard to price from photos... pop round... one fixed price".
3. Customer picks times that suit; the tradie books one of them (tradie map, site visit job).
4. Decided: $30, paid by the customer, comes off the final price if they go ahead. On the tradie side it appears as a gold quote bounty for 24h.
5. After the visit the flow carries on as normal: price ready → accept & pay → sorted.

MOTION

`M25` Status change
`M11` Tracker progress

Inventory: `C22`

Job · price ready



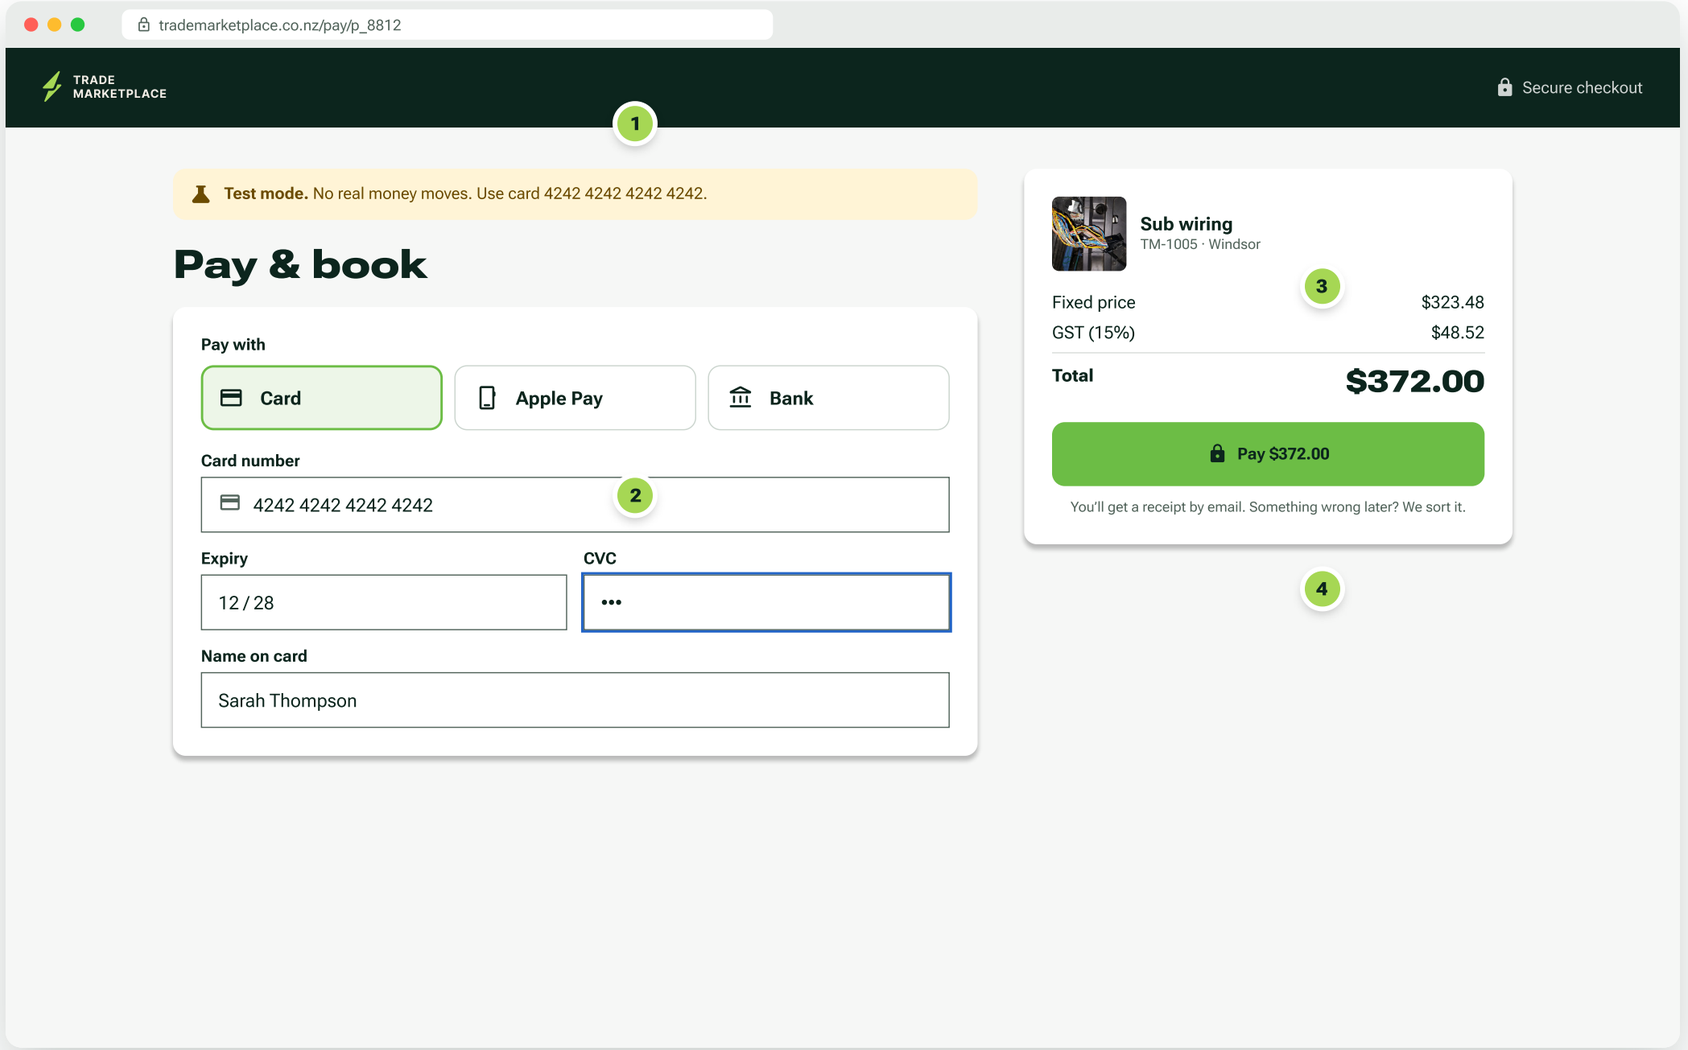
1. The most important screen. Price reveal (M09): Forest block wipes in, $0 → $372.00 counts up, Lime underline draws, ticks appear one by one. Once per job.
2. Price is 52px Display, tabular numbers, “incl. GST” always.
3. 3 reassurance ticks (wording per trade).
4. Hero “Accept & pay” → Checkout. “No thanks” → decline dialog (C09).
5. Also announced: email + push “Your price for Sub wiring is ready.”

MOTION

M09 Price reveal
M04 Button press

Inventory: **C08**

Checkout



1. Focused checkout: slim nav, no distractions. TEST banner until real payments are switched on by both founders.
2. Card fields are the payment provider's hosted fields (Stripe/Windcave), styled with our field tokens. Apple Pay / Google Pay buttons where supported.
3. Order summary sticky on the right. Pay button repeats the total.
4. States: processing (button spinner, page locked), 3-D Secure (provider dialog), declined (alert banner at top, keep method).

MOTION

`M04` Button press

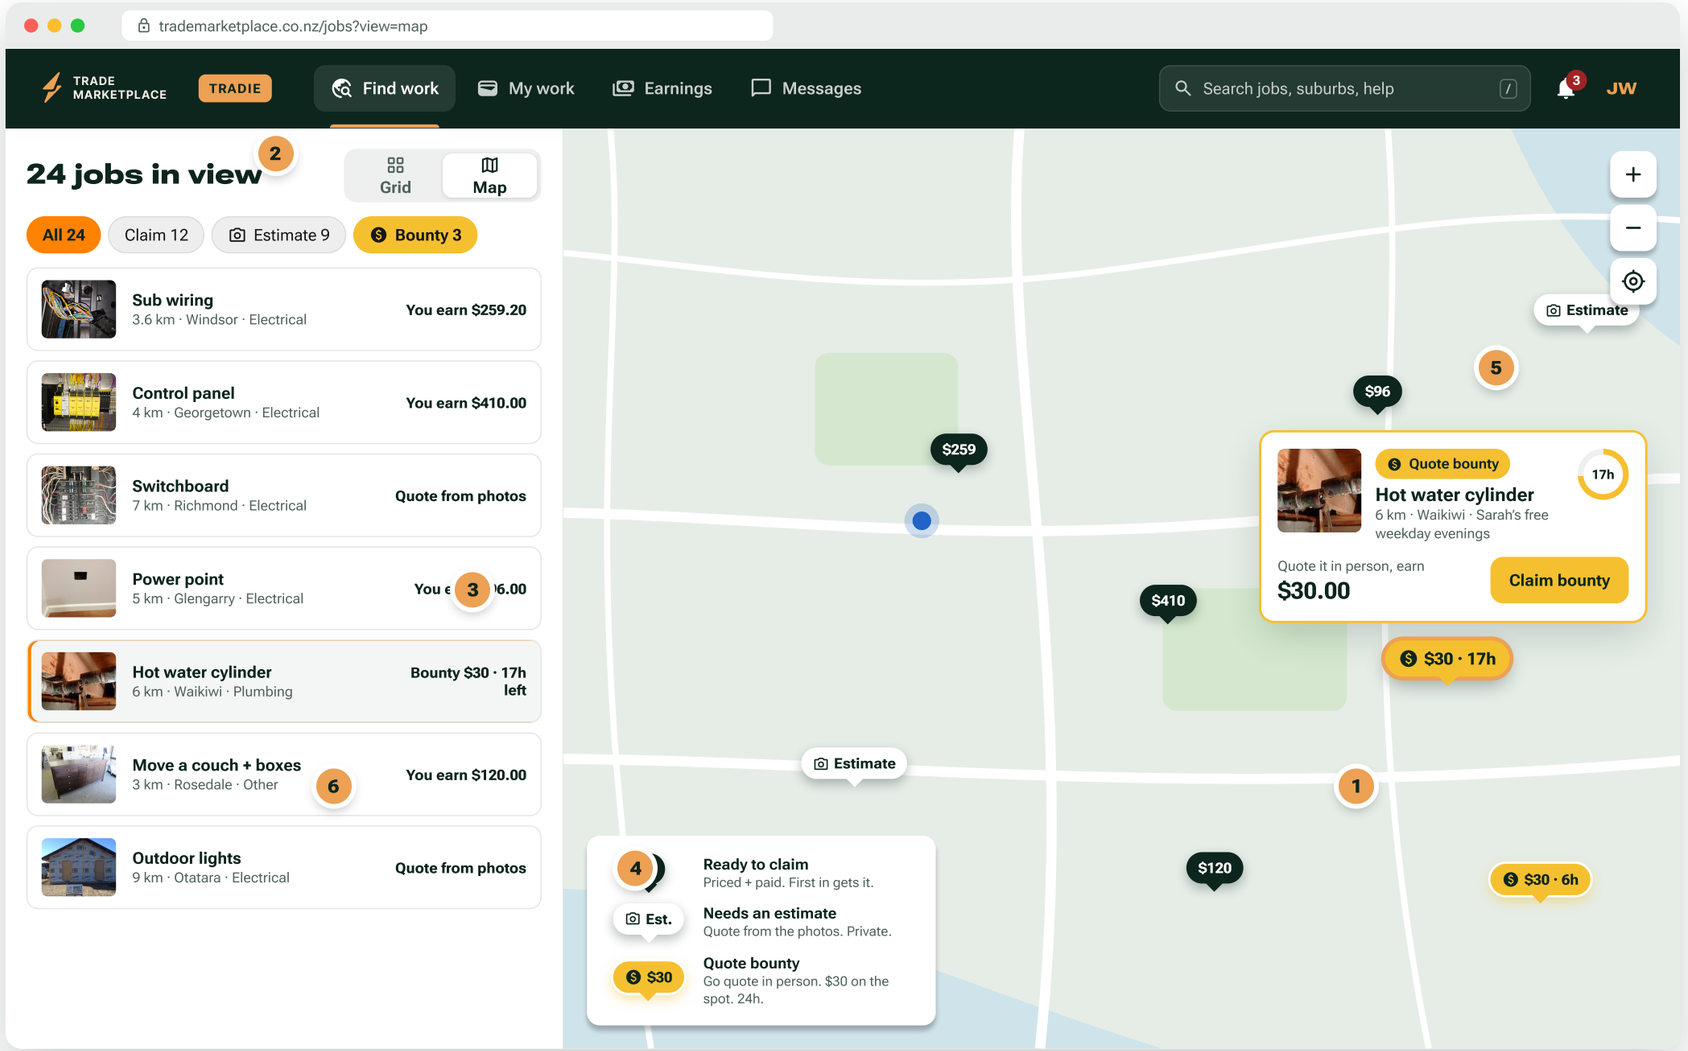
Inventory: **D02**

Job board · map (desktop)



1. Uber-style map of every job near you, three kinds: Forest "$259" = ready to claim (what you earn); white "Estimate" + camera = quote from photos; GOLD "$30 · 17h" = quote bounty (go and quote in person).
2. Quick filter chips with live counts. The Bounty chip is gold too. Same filters as the grid; state in the URL.
3. Hover a row → its pin grows with a signature ring (and the reverse). Click a pin → preview card; click card → job page (M21).
4. Legend card bottom-left so the pin types are obvious on first use. Dismissible; remembered per user.
5. Bounty card: gold outline, countdown ring (bounties expire 24h after they're created), $30 for an in-person quote, "Claim bounty". Gold pins shimmer every few seconds (M27): it should feel like a game.
6. "Other" jobs (any labour) appear like any other trade, labelled Other. Anyone can take Other jobs.

MOTION

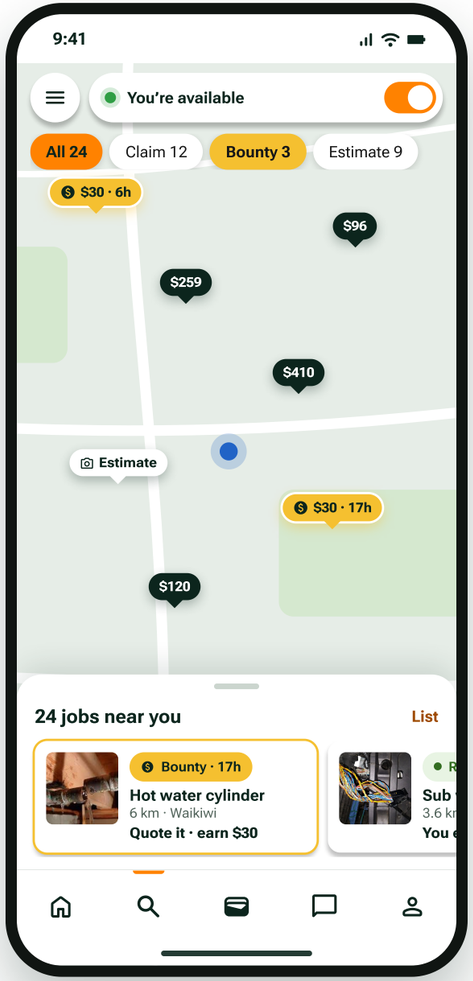
M21 Map pins
M27 Bounty shimmer + countdown
M16 Tab underline

Inventory: **D03** · **D19**

Job map on the phone, Uber-style

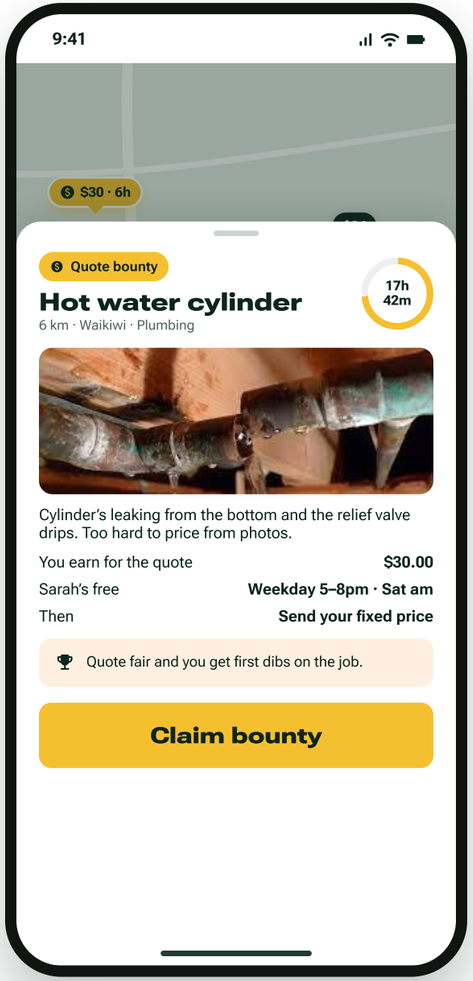
Built for one hand on a job site: full-screen map, three kinds of pin with GOLD quote bounties, a swipeable sheet of jobs, and an "available" switch that pings you about new jobs and bounties nearby.

Map · nearby jobs `/jobs?view=map (phone)`



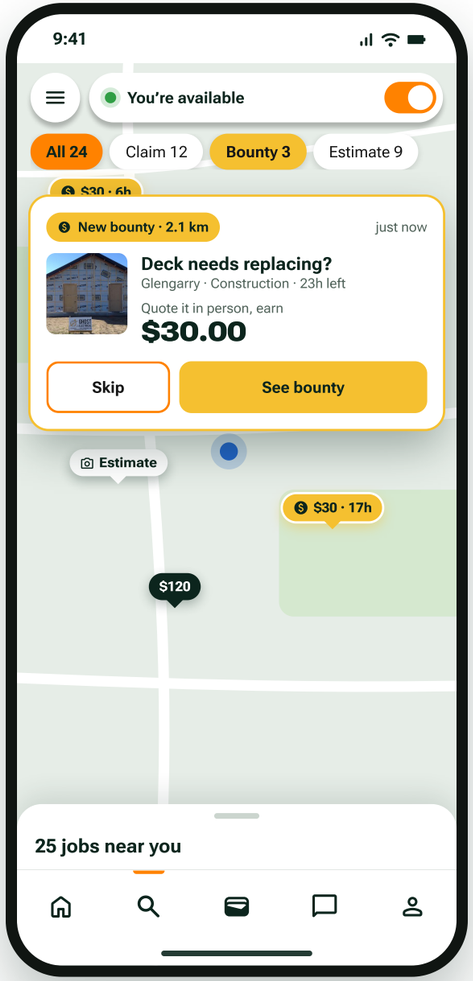
1. Full-screen map, like Uber. Blue dot = you. Pins: Forest "$259" = ready to claim (what you earn); white + camera = quote from photos; GOLD "$30 · 17h" = quote bounty.
2. Gold = easy money. Bounties shimmer (M27), sort first in the sheet, and have their own chip. It should feel like a game.
3. "You're available" switch: on = pinged about new jobs and bounties nearby. Off = browse quietly.
4. Bottom sheet peeks with swipeable job cards. Swiping centres the pin; tapping a pin scrolls to its card (M21). Drag up for the full list.

Quote bounty (sheet up) `/jobs/[id] · QUOTE_BOUNTY`



1. Triggered when the Trade Marketplace AI can't settle a price from the photos and estimates: a $30 bounty appears on the map for 24h.
2. Anyone good can claim it; one person at a time. After claiming, pick one of the customer's windows to visit (no messaging needed).
3. After the visit, send a fixed price. The AI checks it against the other estimates and its own prediction.
4. If the price is accepted and fair, the quoter gets first dibs on the job. Way off (e.g. $1,200 on a $300 job): it's ignored and the job opens to everyone.
5. Countdown ring shrinks to 0 (M27). Expired → the office decides.

New job ping (available) `(in-app + push)`

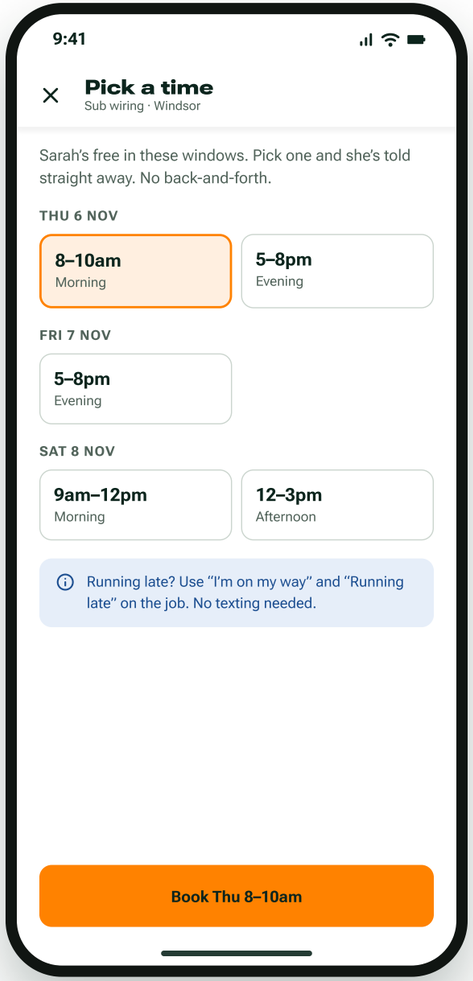


1. When "available" is on, new jobs and bounties near you pop in as a card (M14/M20) and as a push when the app is closed.
2. Shows what you earn, how far and the time left. Bounty pings are gold.
3. Skip hides it from your pings (not from the map). One ping at a time; quiet hours default 9pm–7am.

Booking windows & crews

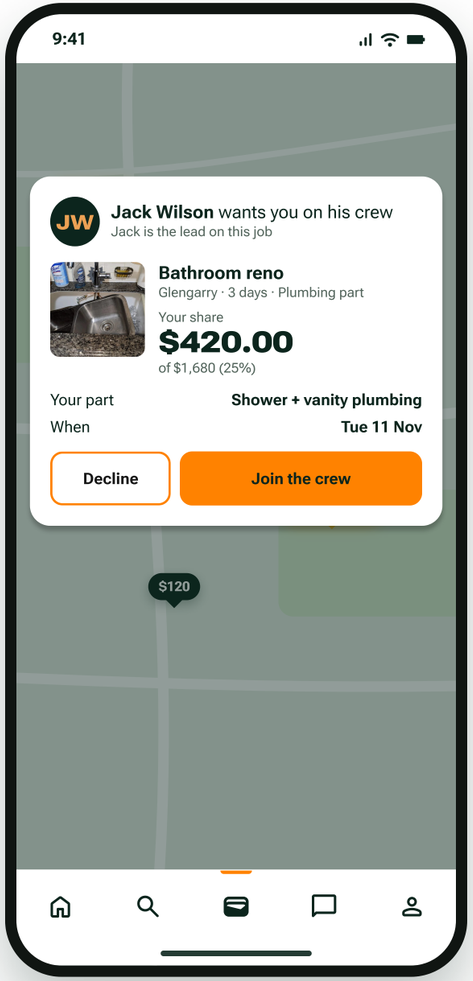
No back-and-forth messages: tradies book one of the customer's windows. Bigger jobs: the lead invites a crew with a set split; the customer only sees the lead.

Book a time window `/jobs/[id]/book`



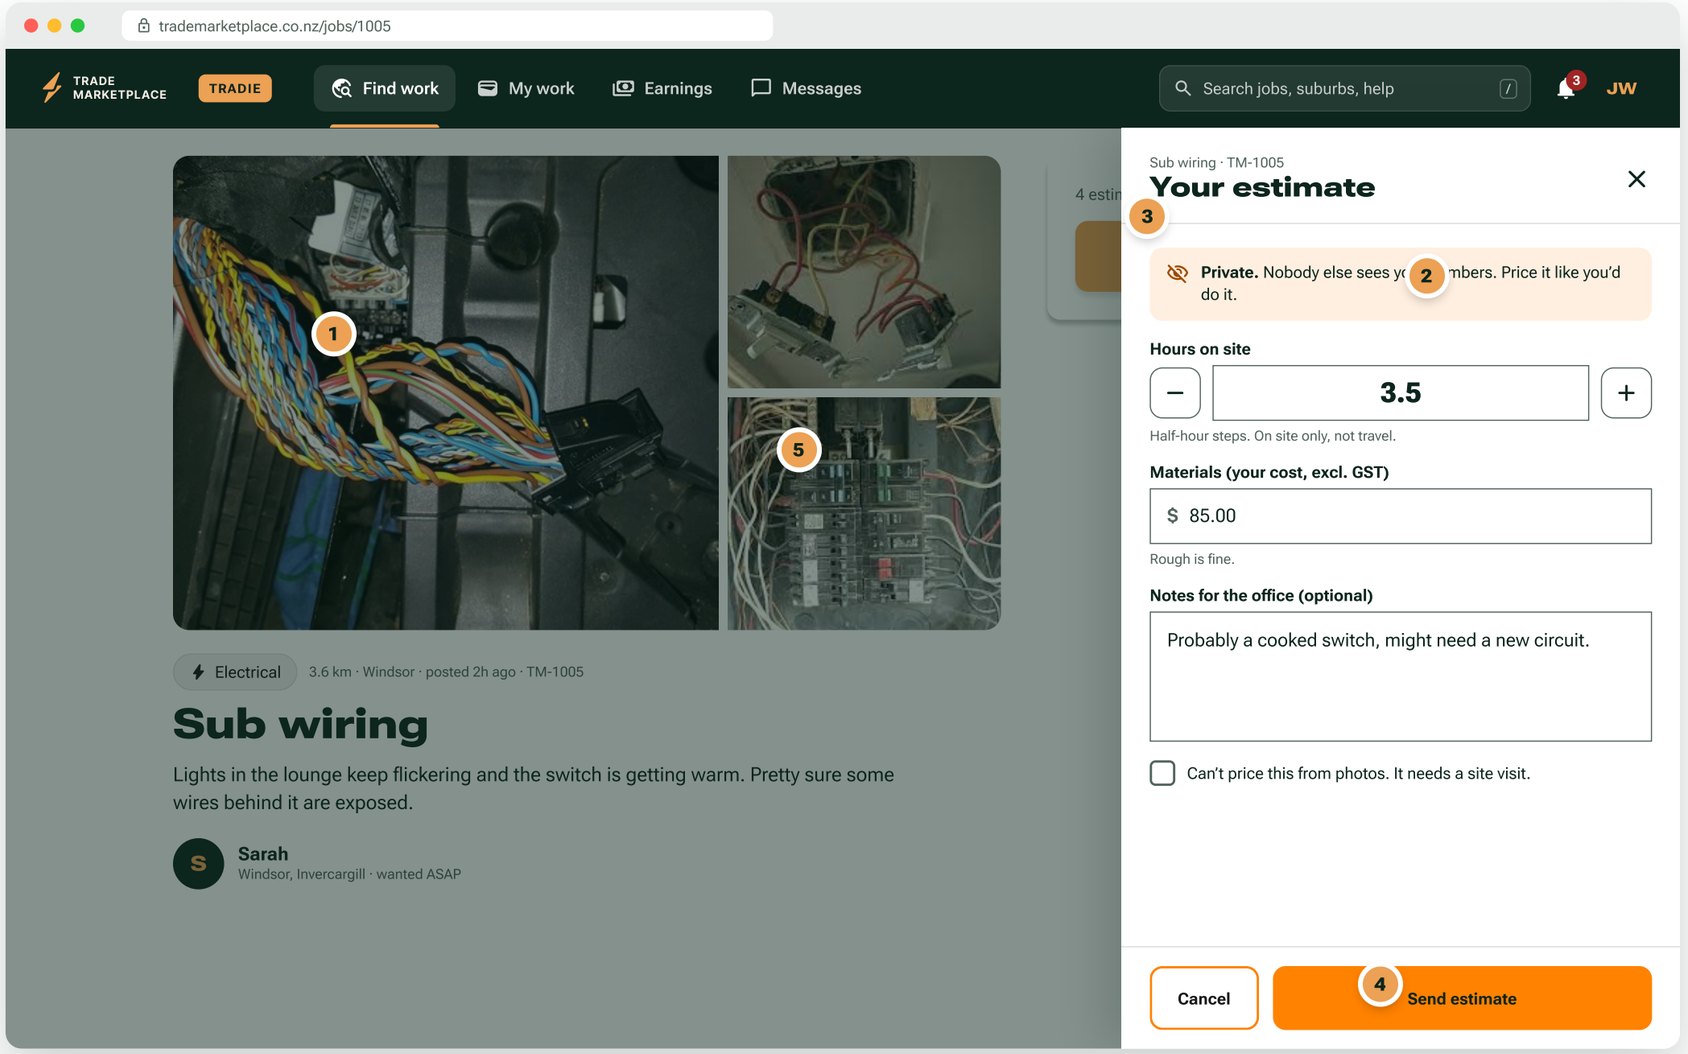
1. Replaces direct messages for booking. The customer sets windows when posting; the tradie picks one.
2. Preset updates instead of chat: "I'm on my way", "Running late (15/30/60 min)", "Need to reschedule" (→ pick a new window).
3. Messages still exist for problems, routed through Trade Marketplace if needed. Keep them out of the happy path.
4. Customer sees: "Jack's booked in Thu 8–10am" + add to calendar.

Crew invite `(push + in-app)`



1. Team jobs: the lead claims the job, then invites people from their crew (or any worker) with a set split.
2. The invite shows the job, their part, when, and their share in dollars and %. Accept or decline.
3. Each crew member is paid their share directly through payroll. The lead is responsible for the job, the customer and the evidence.
4. The customer only ever sees the lead. Nothing changes for them.

Job · estimate (drawer)



1. Job page (trade): gallery, details, customer first name + suburb only. Right card: social proof + hero "Estimate now".
2. Estimate opens in a right drawer (M12) so the photos stay visible behind. Esc closes; unsent values kept if reopened.
3. Private banner. Hours stepper (keyboard: arrows ±0.5), materials, note, site-visit tick.
4. Send → drawer closes → bolt flash "Sent." toast-style (M10 small) and the card switches to "Your estimate: 3.5 h · $85 · Edit".
5. Not eligible (wrong trade/unverified): hero replaced by a banner explaining why.

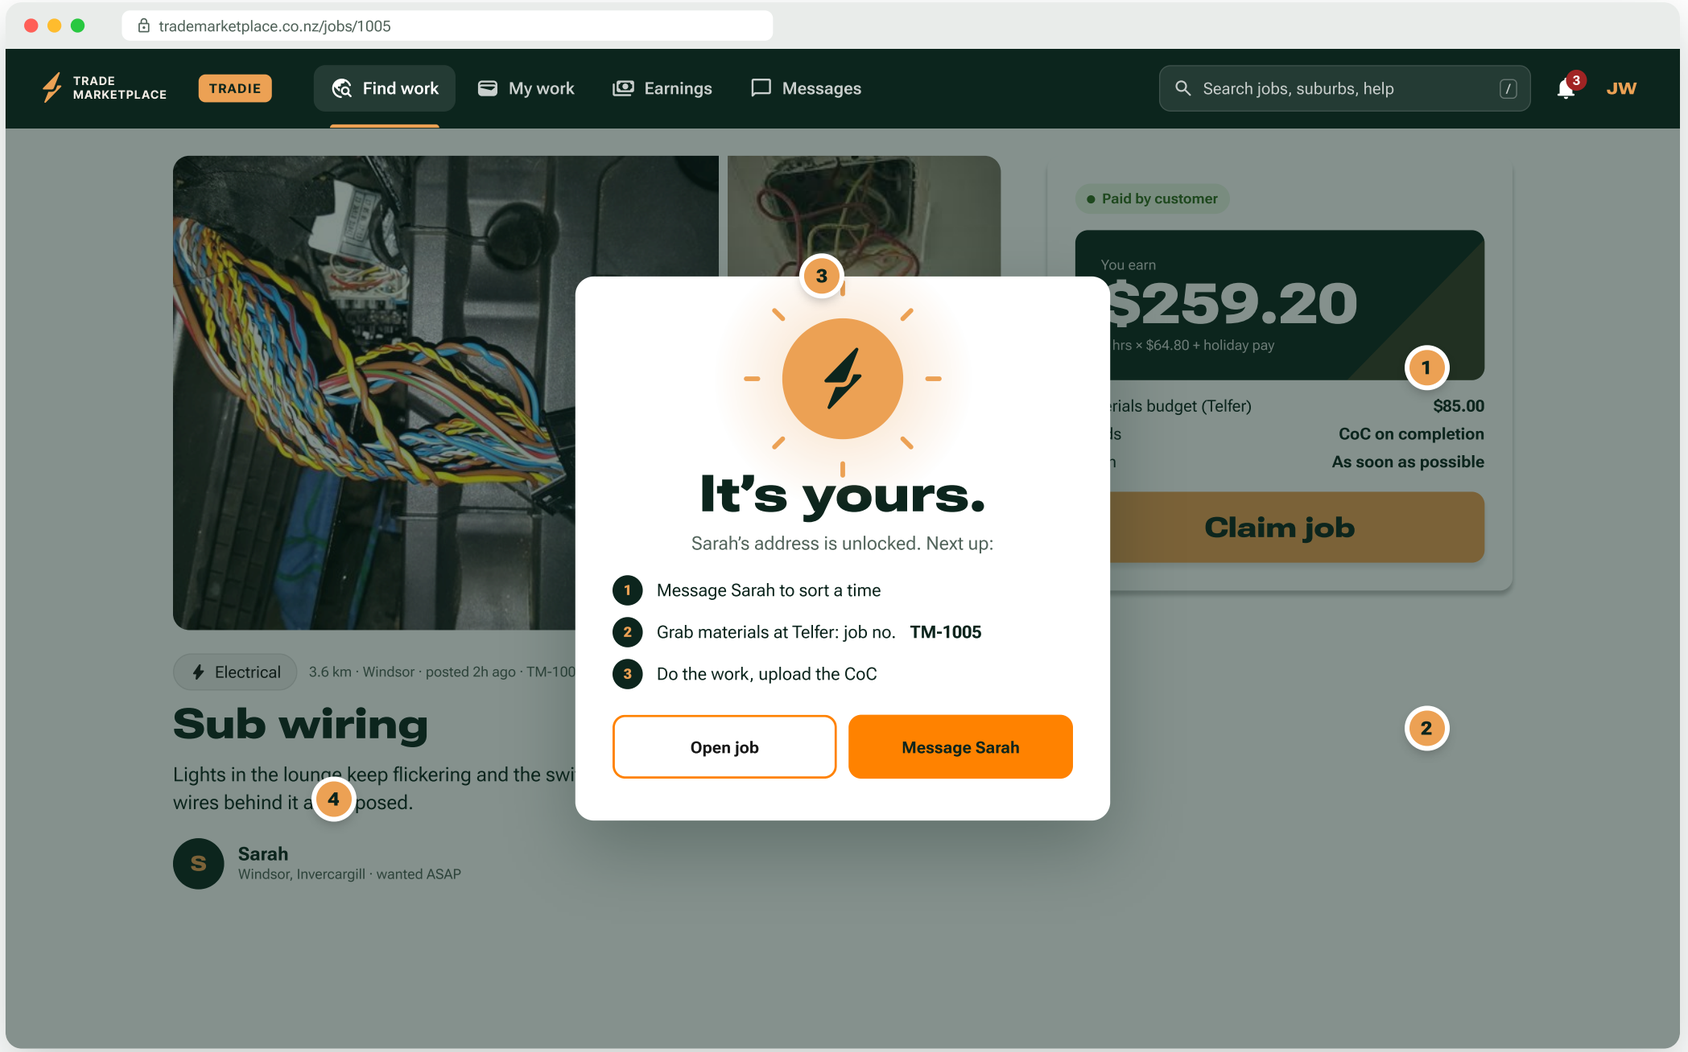
M10 Bolt flash

Inventory: **D04** · **D05**

Job · claim (+ result)



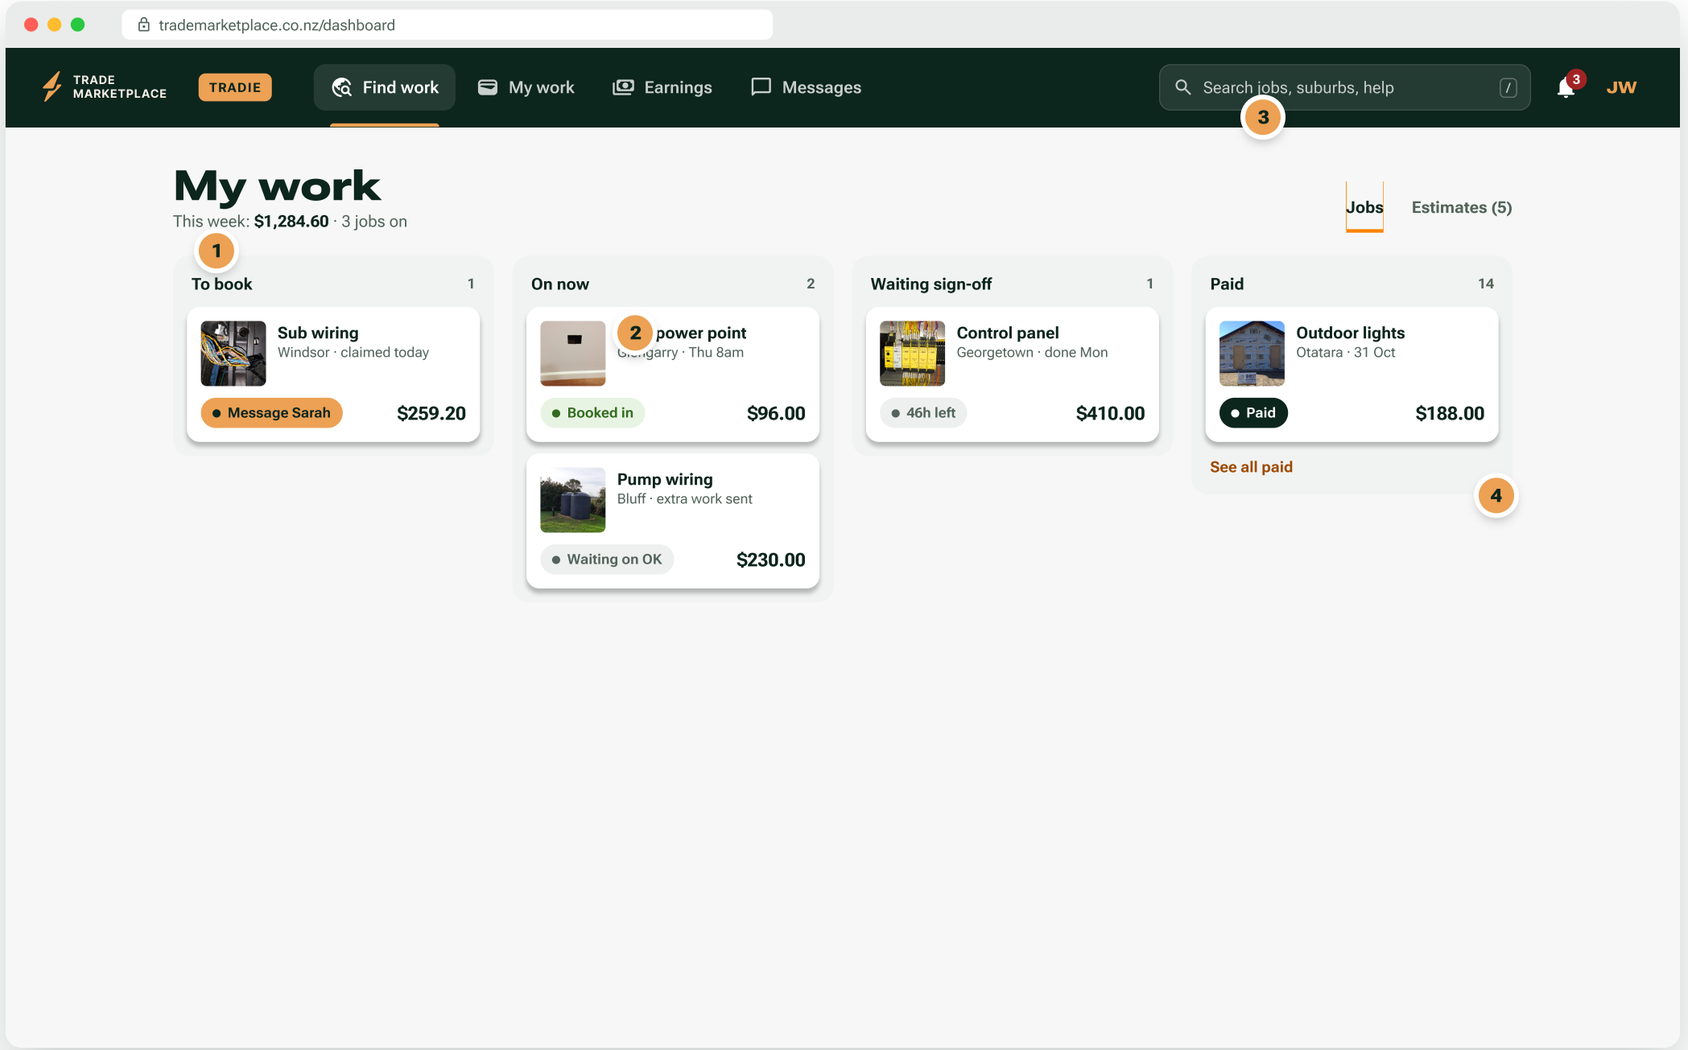
1. Claimable job: what you earn (M09 reveal, tradie version), budget, needs, timing. Never the customer price.
2. Claim → small confirm dialog first ("Take this job?" with the same numbers, Yes it's mine / Not now). Shown here: the result.
3. Success dialog: bolt mark in a signature circle with sparks (M10), "It's yours.", three next steps, two actions.
4. Lost the race: the card greys out and a banner says "Too slow. Someone else got this one." + "See similar jobs" (M22).

MOTION

- `M09` Price reveal
- `M13` Dialog
- `M10` Bolt flash
- `M22` Claim lost

Inventory: `D06` · `D07`

My work



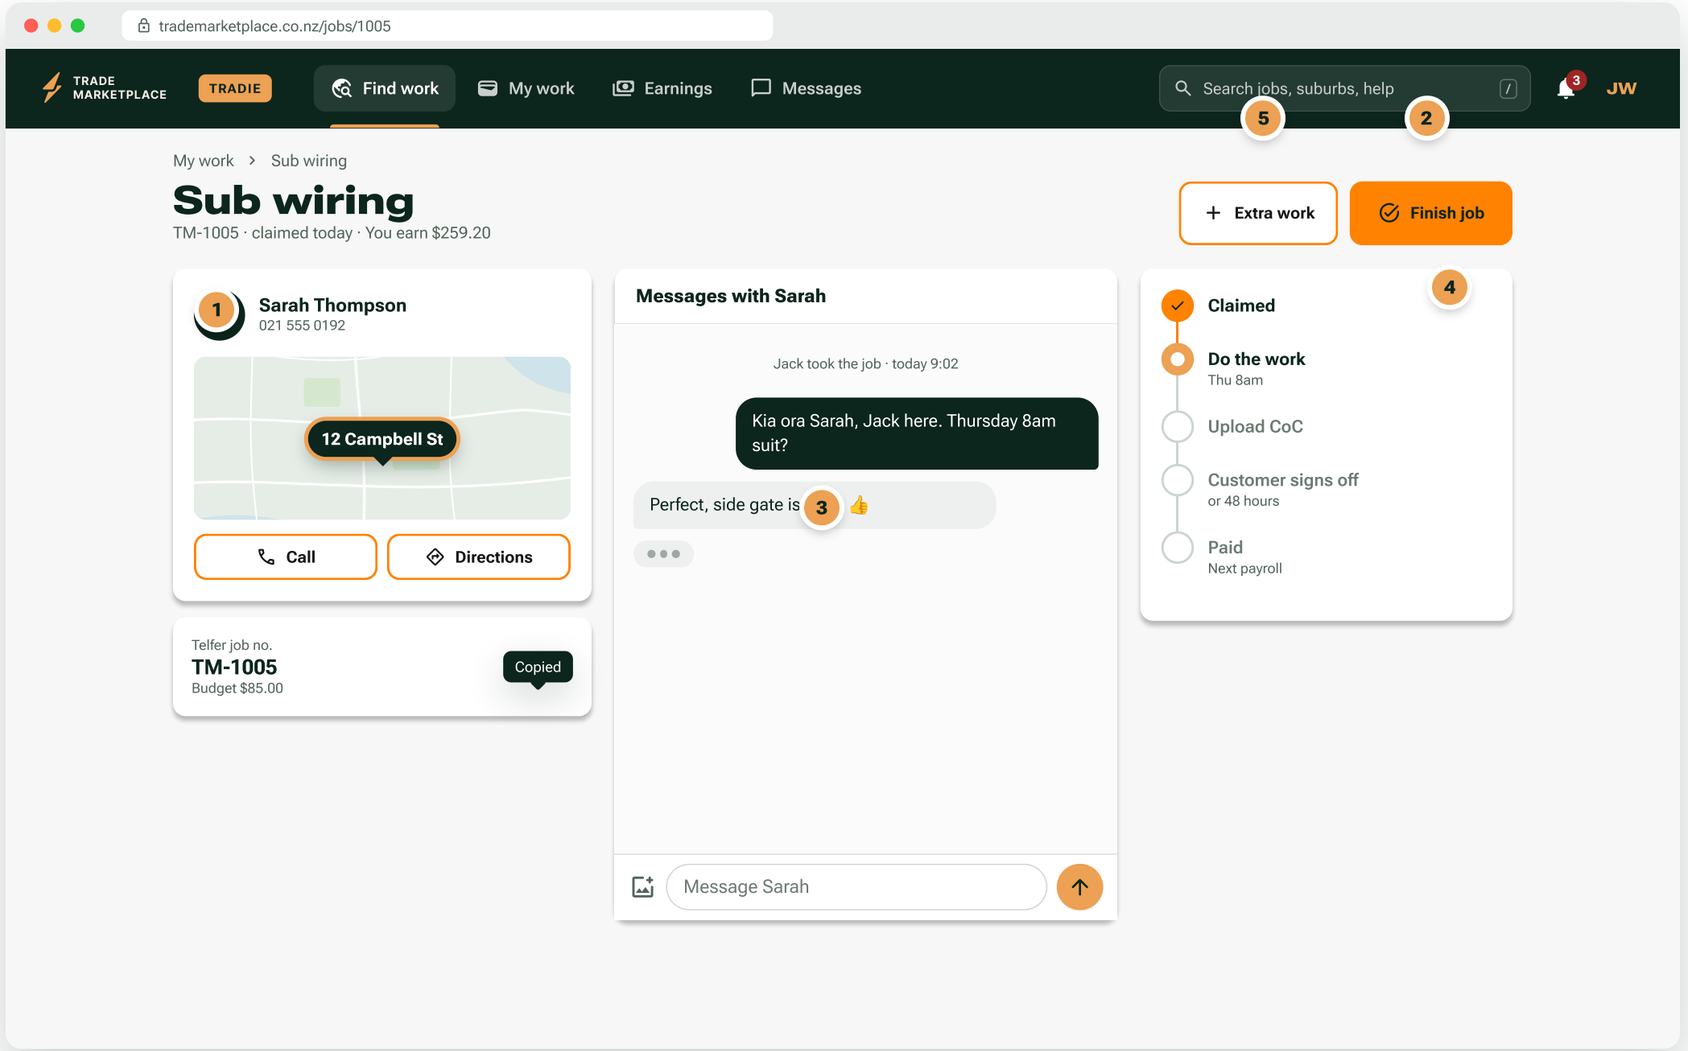
1. Read-only board grouped by the tradie's next move (no dragging; status comes from the server).
2. Card pills = the next action ("Message Sarah"), not database words. Click → job workspace.
3. Estimates tab: table of estimates with outcome (Priced · Taken by you · Not taken).
4. On mobile this becomes the segmented list from the first guide.

MOTION

M03 Hover lift
M25 Status change

Inventory: **D08** · **D13**

Job workspace (+ extra work drawer)



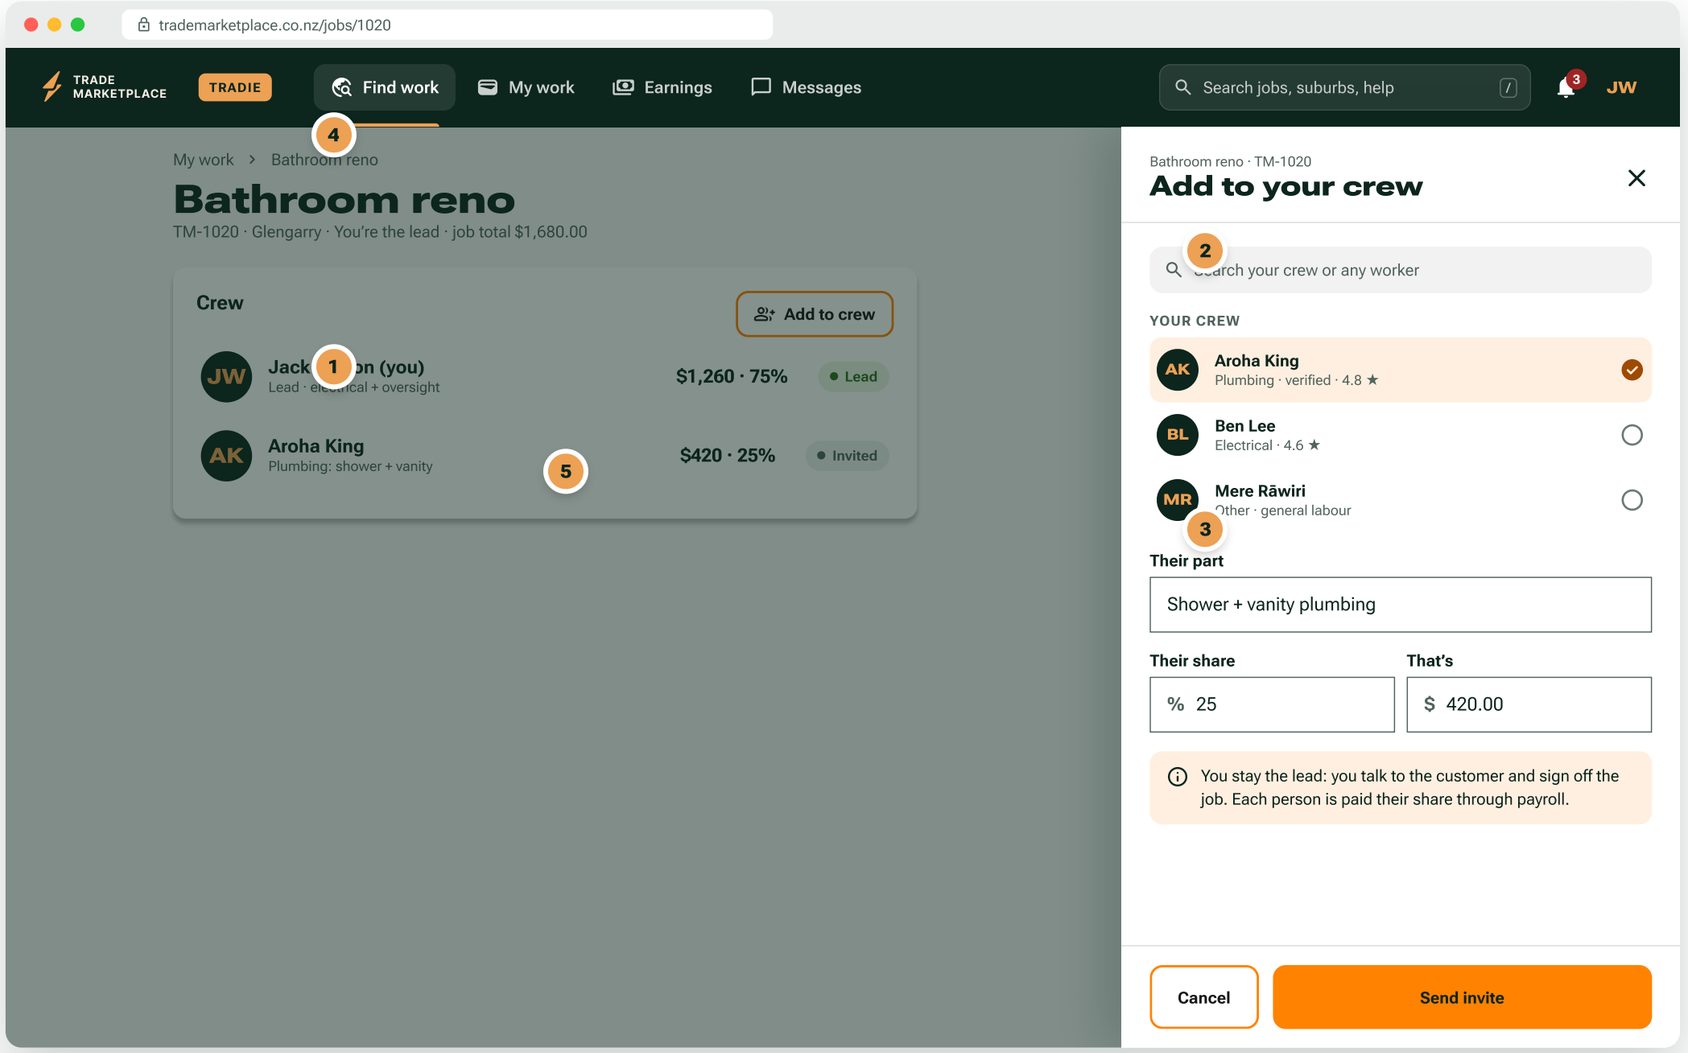
1. Everything for the job on one screen: customer + map + call/directions, Telfer number (click to copy, tooltip “Copied”), live messages, tracker.
2. Two main actions top right: Extra work (opens drawer, D10) and Finish job (D11).
3. Messages live (M19): typing dots, new bubbles rise in. Photos can be sent.
4. Tracker shows what’s next, including the 48h sign-off window.
5. Extra work drawer (not shown): same pattern as the estimate drawer: what, required photos, hours, materials, Send for pricing. Status then shows on the tracker.

MOTION

M19 Live message
M12 Drawer
M11 Tracker progress
M14 Toast

Inventory: **D09 · D10**

Lead adds a crew (team job)



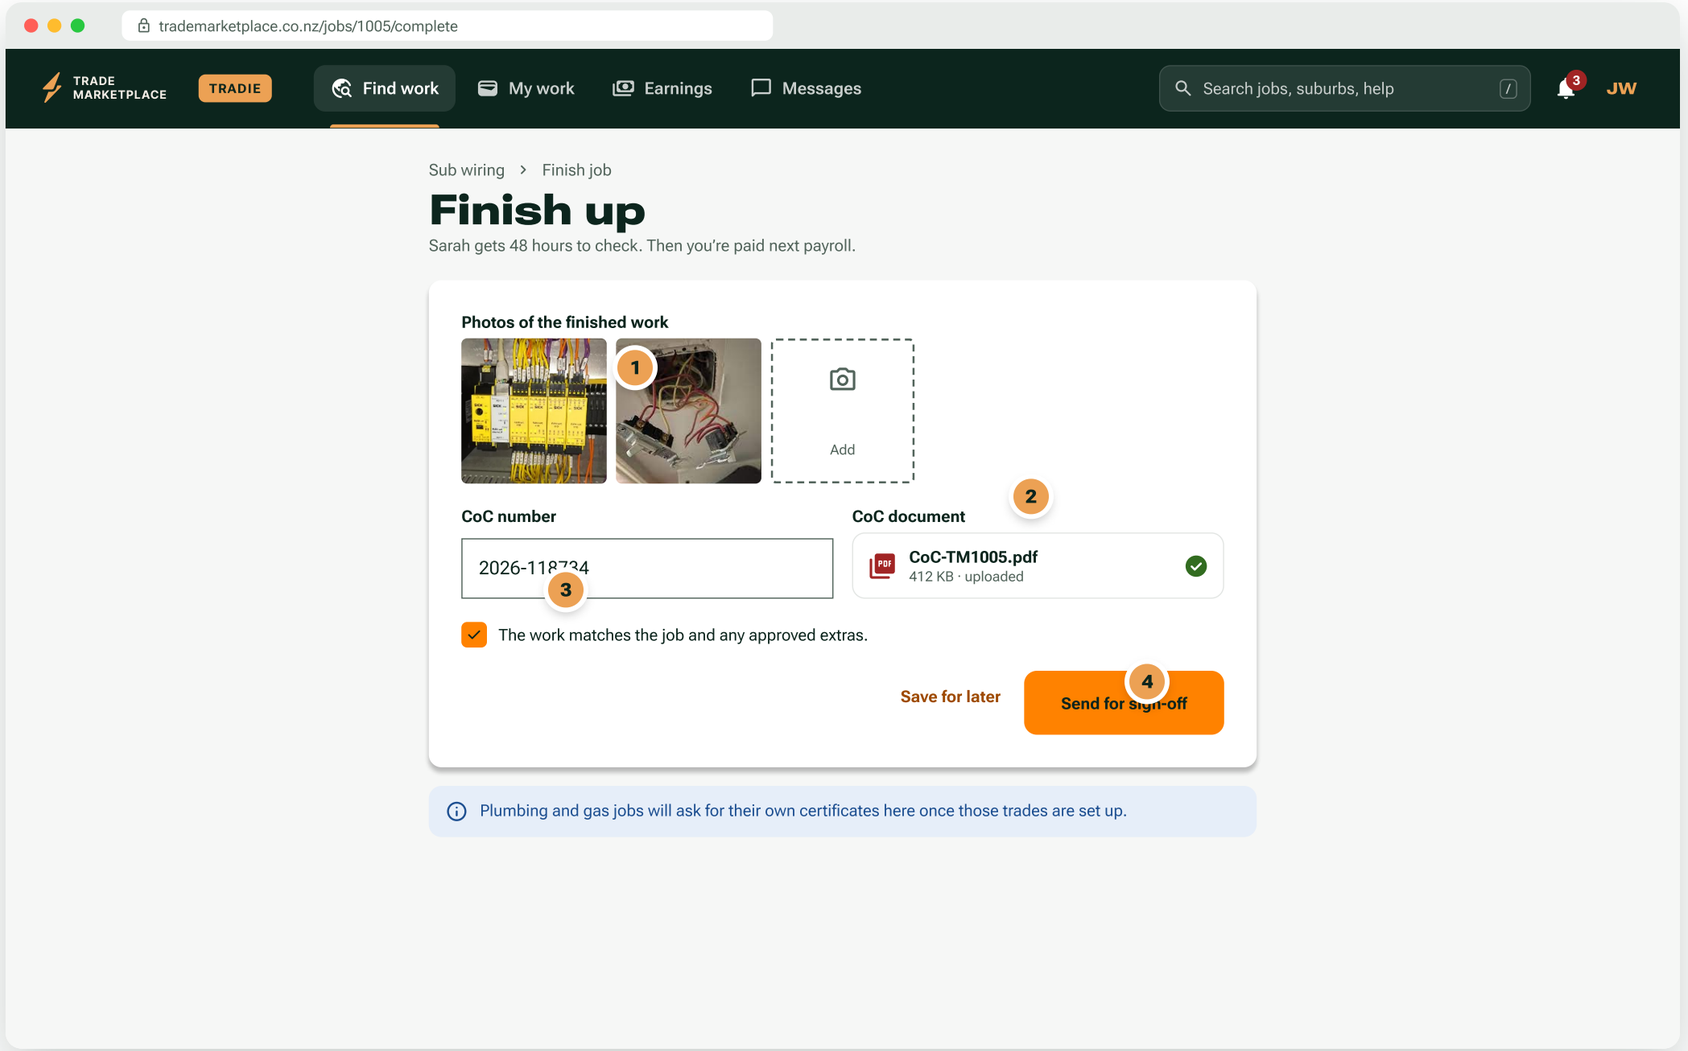
1. Team jobs (decision 6a): the lead claims the job and adds crew with a split they set. Shares must add to 100%; the lead's share updates live.
2. "Your crew" = people you've worked with or added (like friends). You can also search any worker.
3. Invite → the crew member gets the "Join the crew" card (phone) and accepts or declines. Status shows Invited / Joined / Declined.
4. The customer only sees the lead. Payroll pays each person their share.
5. Later (P3): "Need a hand?" lets a solo lead request a specialist (e.g. a plumber on a bathroom reno) without making a new job.

MOTION

M12 Drawer
M14 Toast

Inventory: D21 · D23

Finish job



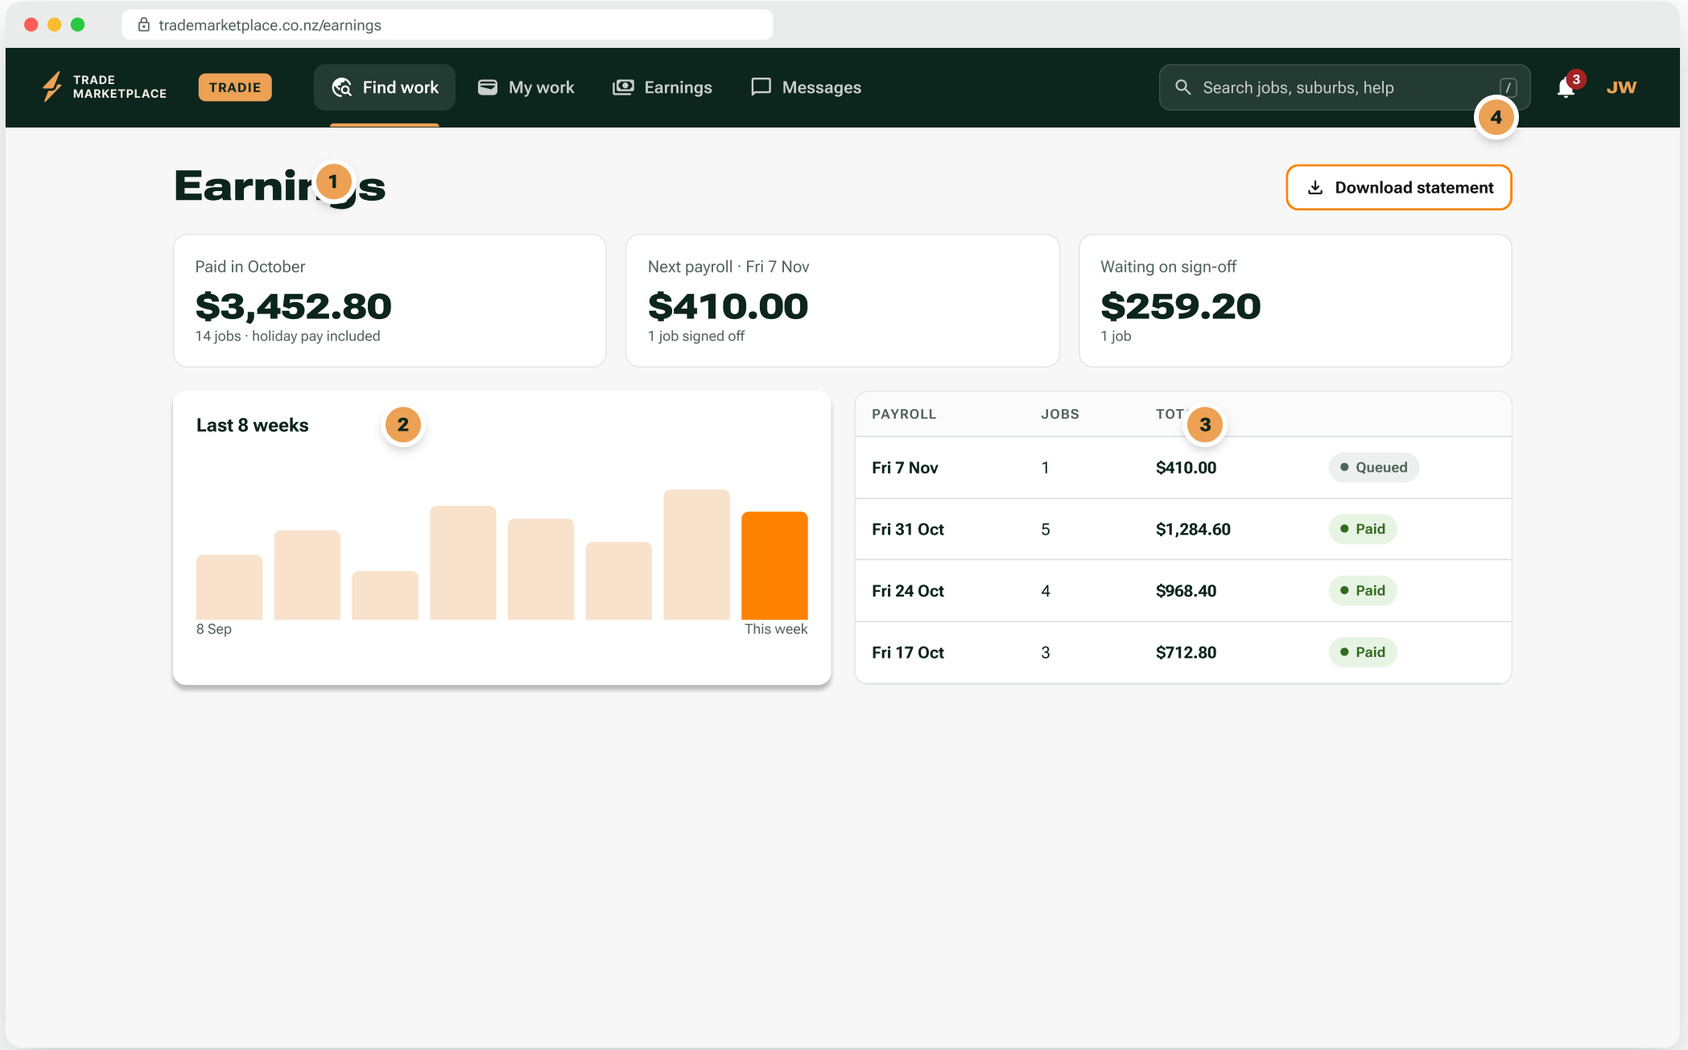
1. Focused single-column form (max 760px). Evidence fields come from the trade's config: electrical = CoC number + PDF/photo (required, existing server rule).
2. Uploads follow M18; a green tick confirms each file.
3. Declaration tick required. "Save for later" keeps a draft.
4. Send → bolt flash "Sent for sign-off" + tracker moves (M11).

MOTION

M18 Upload
M10 Bolt flash
M11 Tracker progress

Inventory: **D11**

Earnings



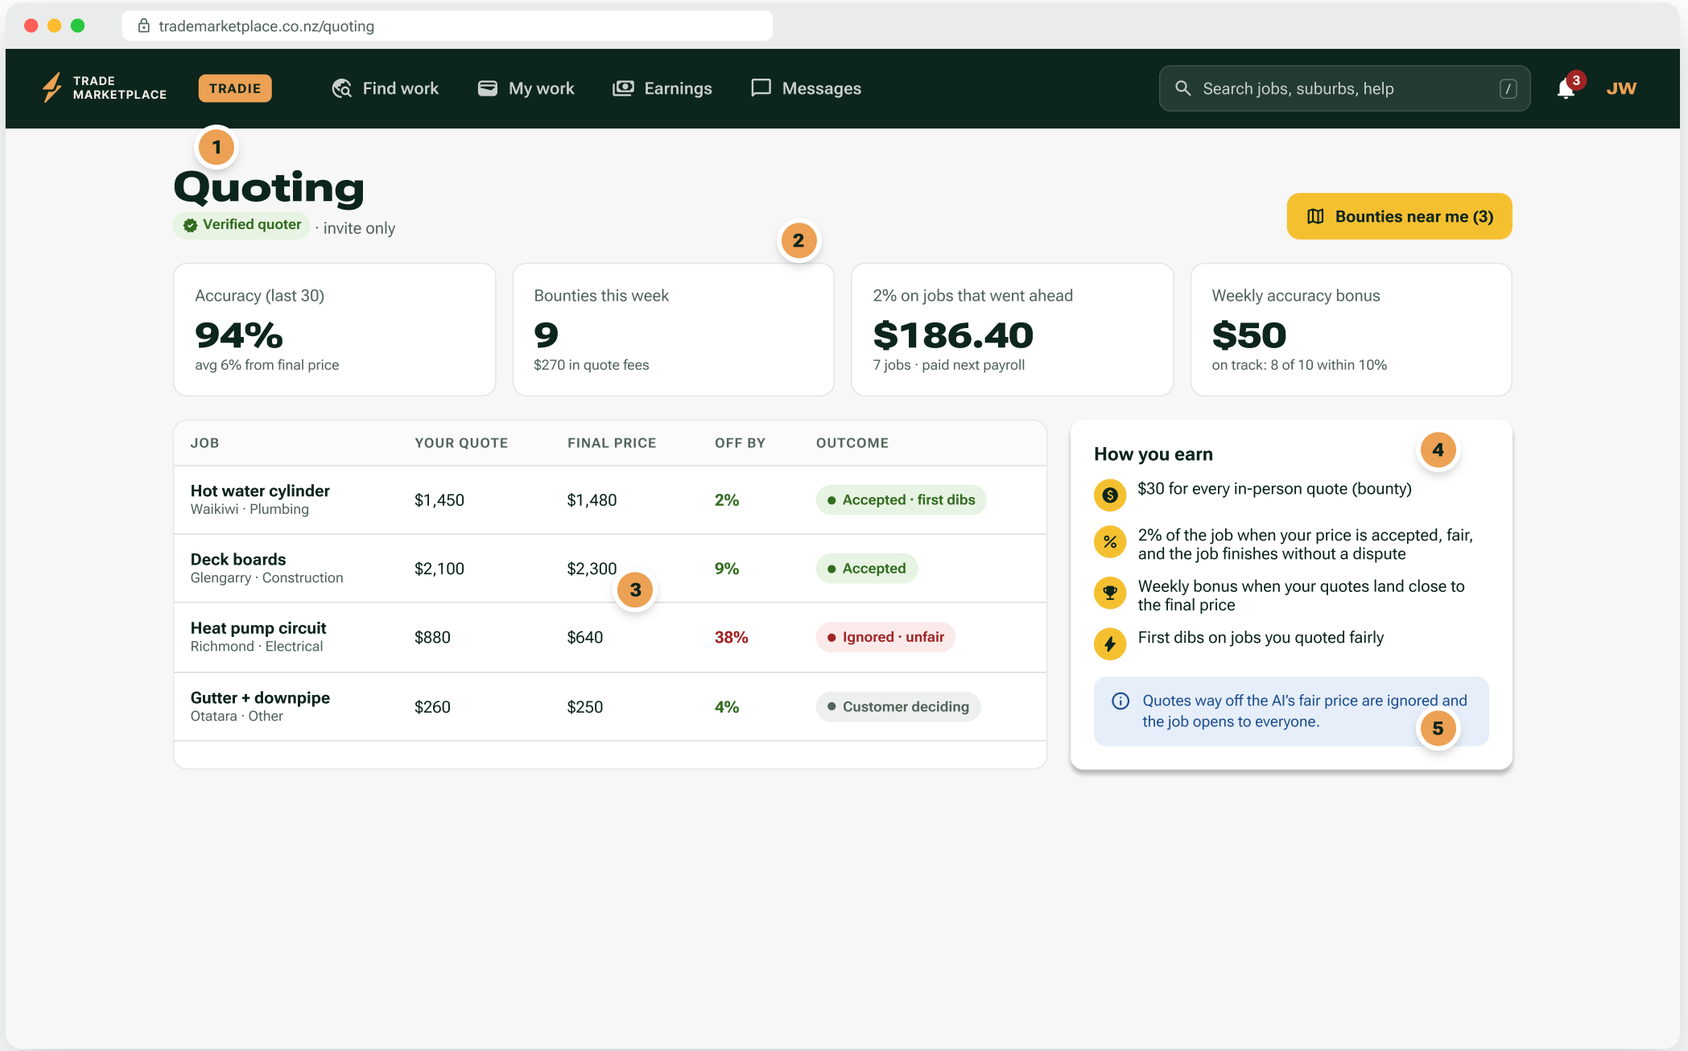
1. KPIs count up on first view (M17). Wording is exact: Queued vs Paid. Never say money moved before payroll runs.
2. Simple 8-week bar chart (current week in Hi-Vis). Hover a bar → tooltip with the amount.
3. Payroll table → click a row for the per-job breakdown (hours, rate, holiday pay).
4. Statement download = PDF for their records/tax.

MOTION

M17 Number ticker
M01 Page enter

Inventory: **D12**

Verified quoter dashboard



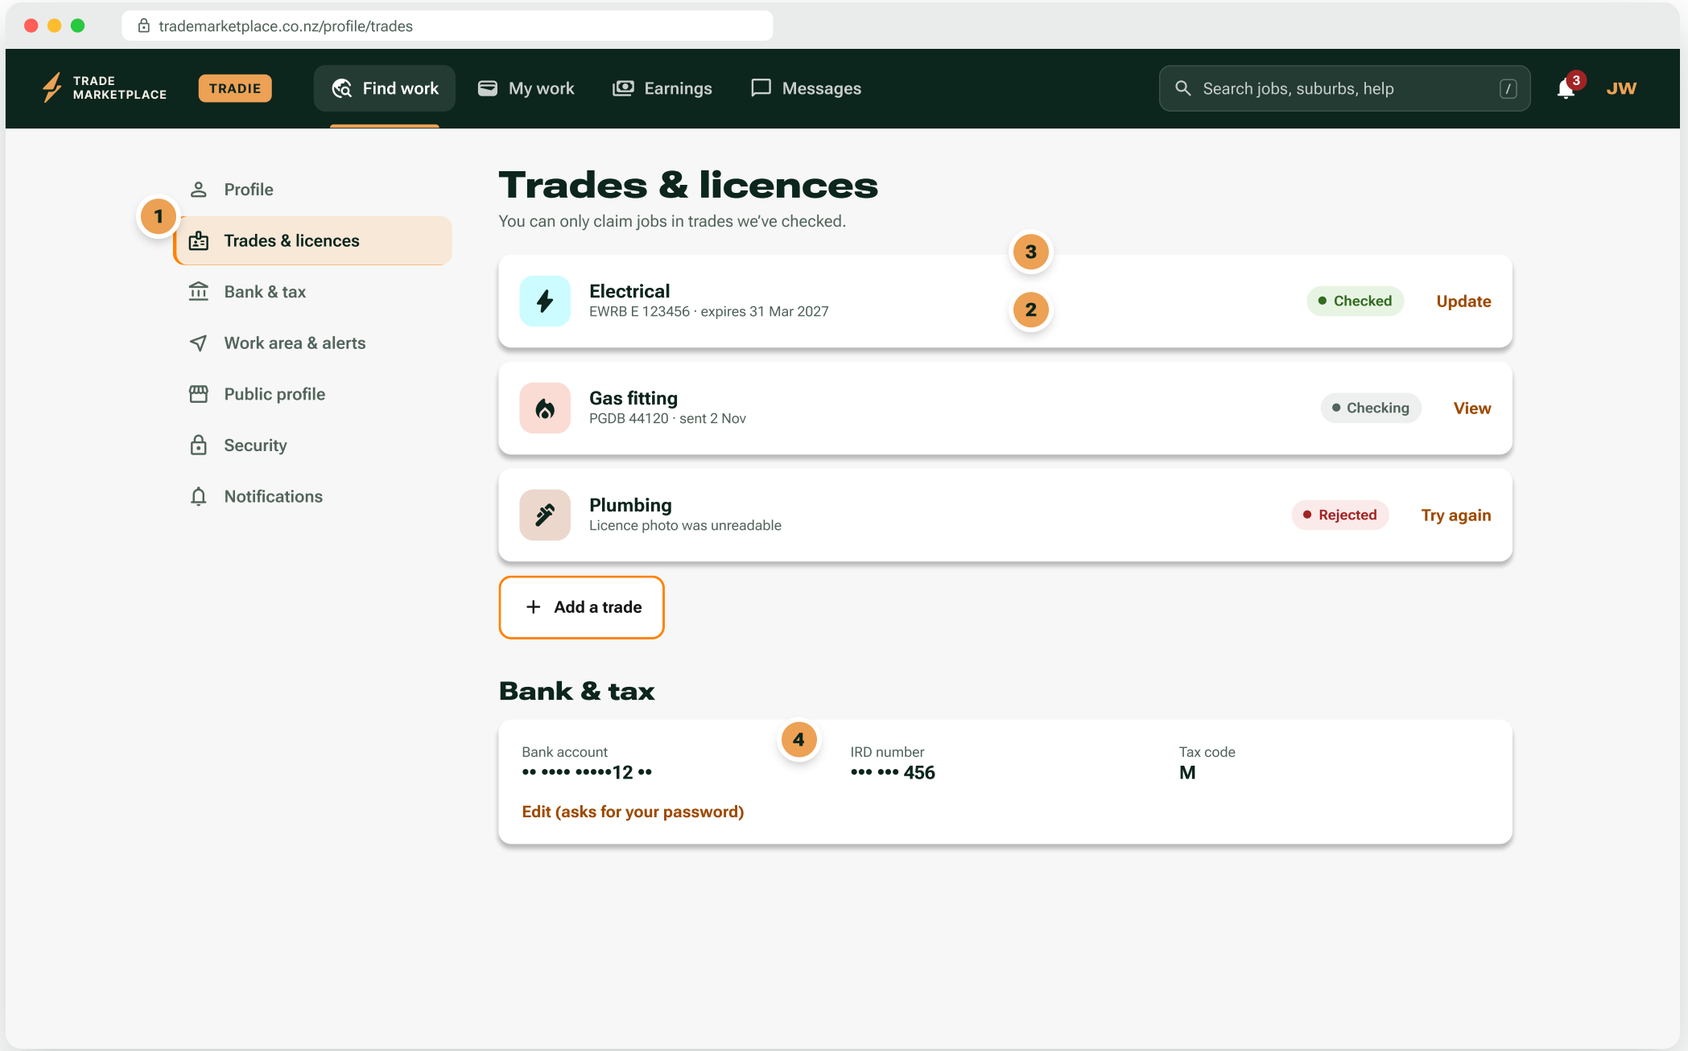
1. Verified quoter: invite only, with tougher screening (decision 7). Someone who knows the trades can earn without picking up tools.
2. Scorecard: accuracy, bounties, 2% earnings, weekly bonus progress (KPIs tick up, M17).
3. History shows each quote vs the final price and the outcome. Way-off quotes are marked "Ignored · unfair".
4. The earning rules are spelt out. The 2% only counts when the price is accepted, fair and the job finishes clean, so quoting high never pays.
5. Exact thresholds (what counts as "fair", bonus size) live in office Settings and can change.

MOTION

M17 Number ticker
M27 Bounty shimmer + countdown

Inventory: **D25**

Account · trades & licences + bank



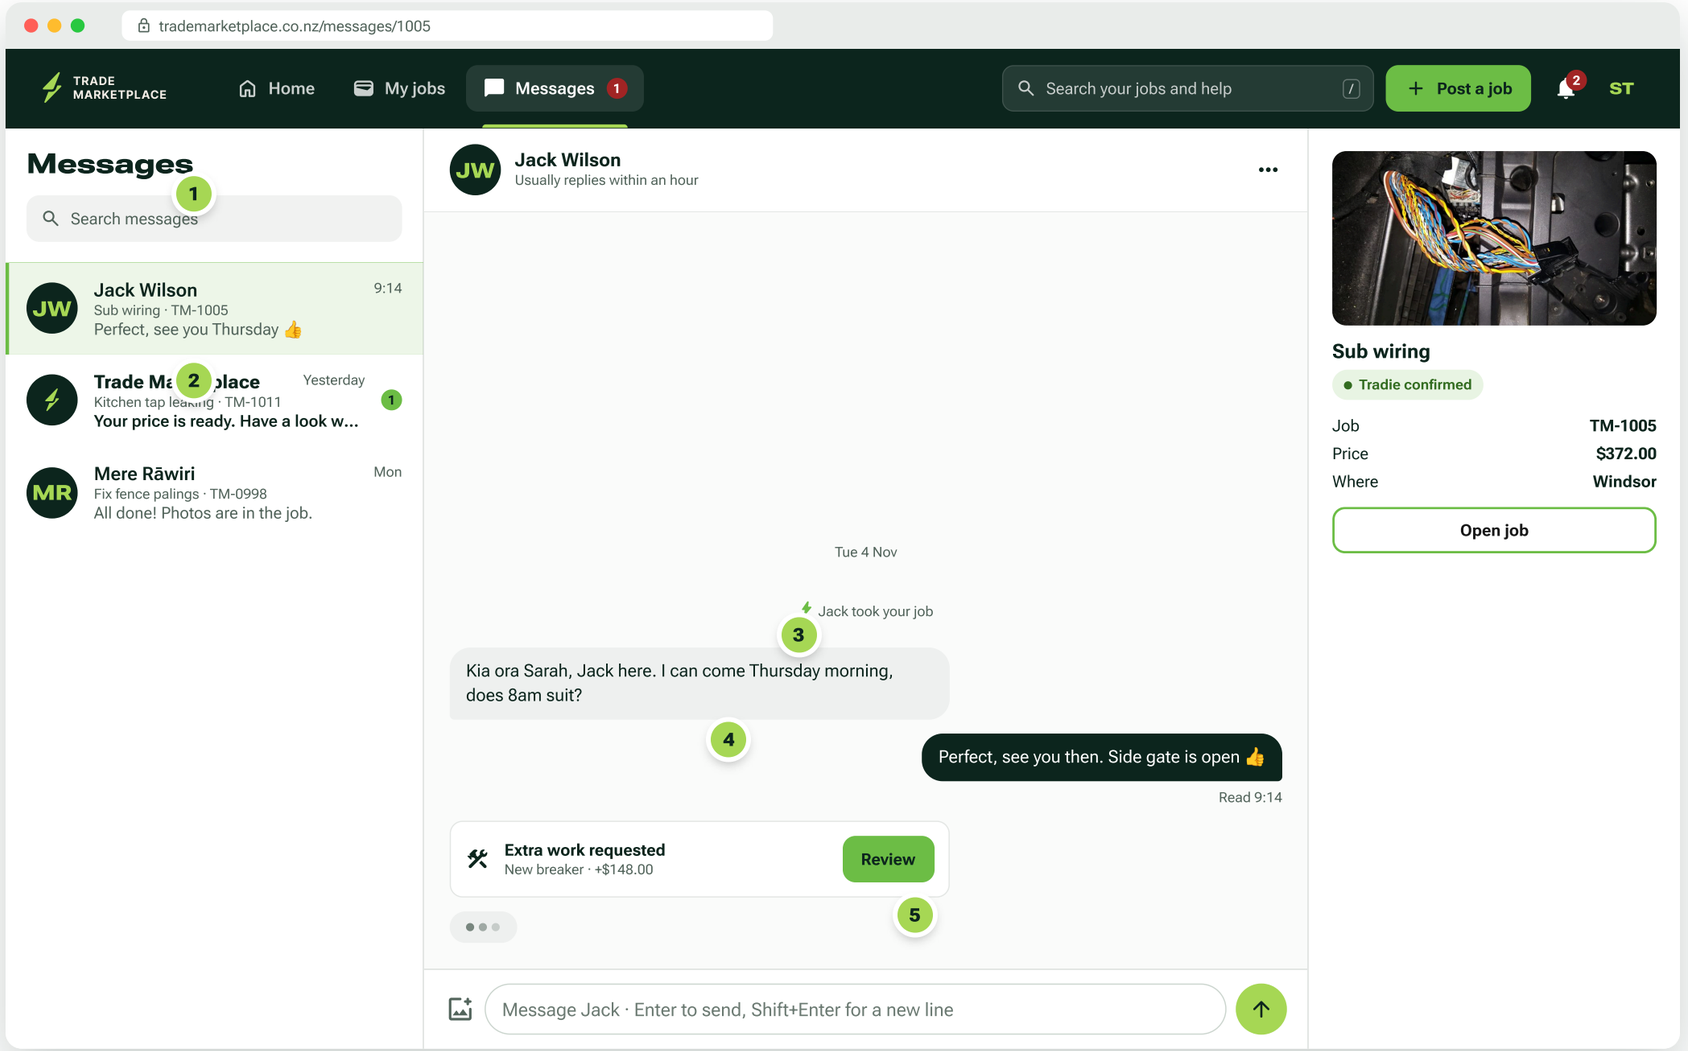
1. Account settings layout: left nav (240px), content max 760. Same pattern for every settings page.
2. One row per trade with its own status: Checked (expiry shown) · Checking · Rejected (with the reason + Try again).
3. Expiring within 30 days: Amber banner + email reminder.
4. Bank & IRD masked after saving; editing asks for the password again. Missing bank details block payouts (banner on Earnings).

MOTION

M01 Page enter
M25 Status change

Inventory: **D14** · **D15** · **D16** · **D17**

Messages



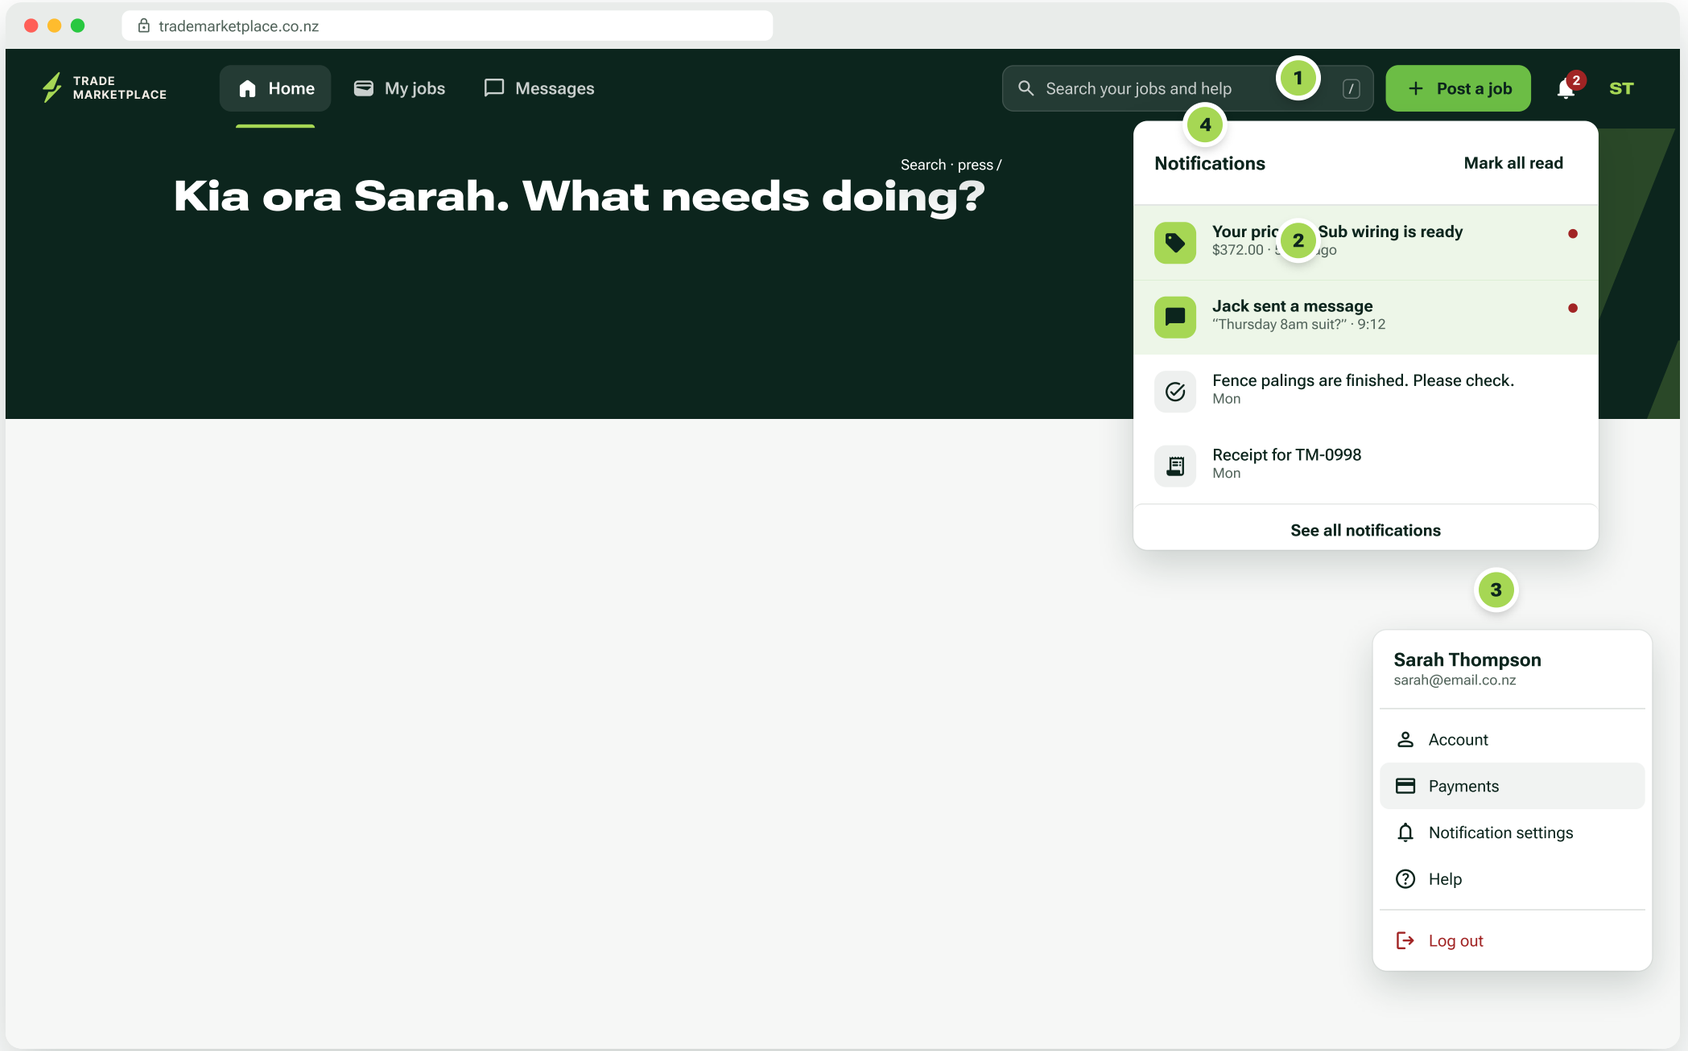
1. Three panes ≥1200px: threads · conversation · job context. 1024–1199: context pane hides behind an (i) button. Mobile: one pane at a time.
2. One thread per job. Office messages show as “Trade Marketplace” with the bolt avatar.
3. Job events appear as action cards inside the thread (extra work, finished, paid).
4. Typing indicator + new bubbles animate (M19). Read receipts on the last message only.
5. Enter sends, Shift+Enter new line. Photos by drag-and-drop or the photo button. Unsent text kept per thread.

MOTION

M19 Live message
M20 Badge pop

Inventory: **E01**

Notifications dropdown + avatar menu



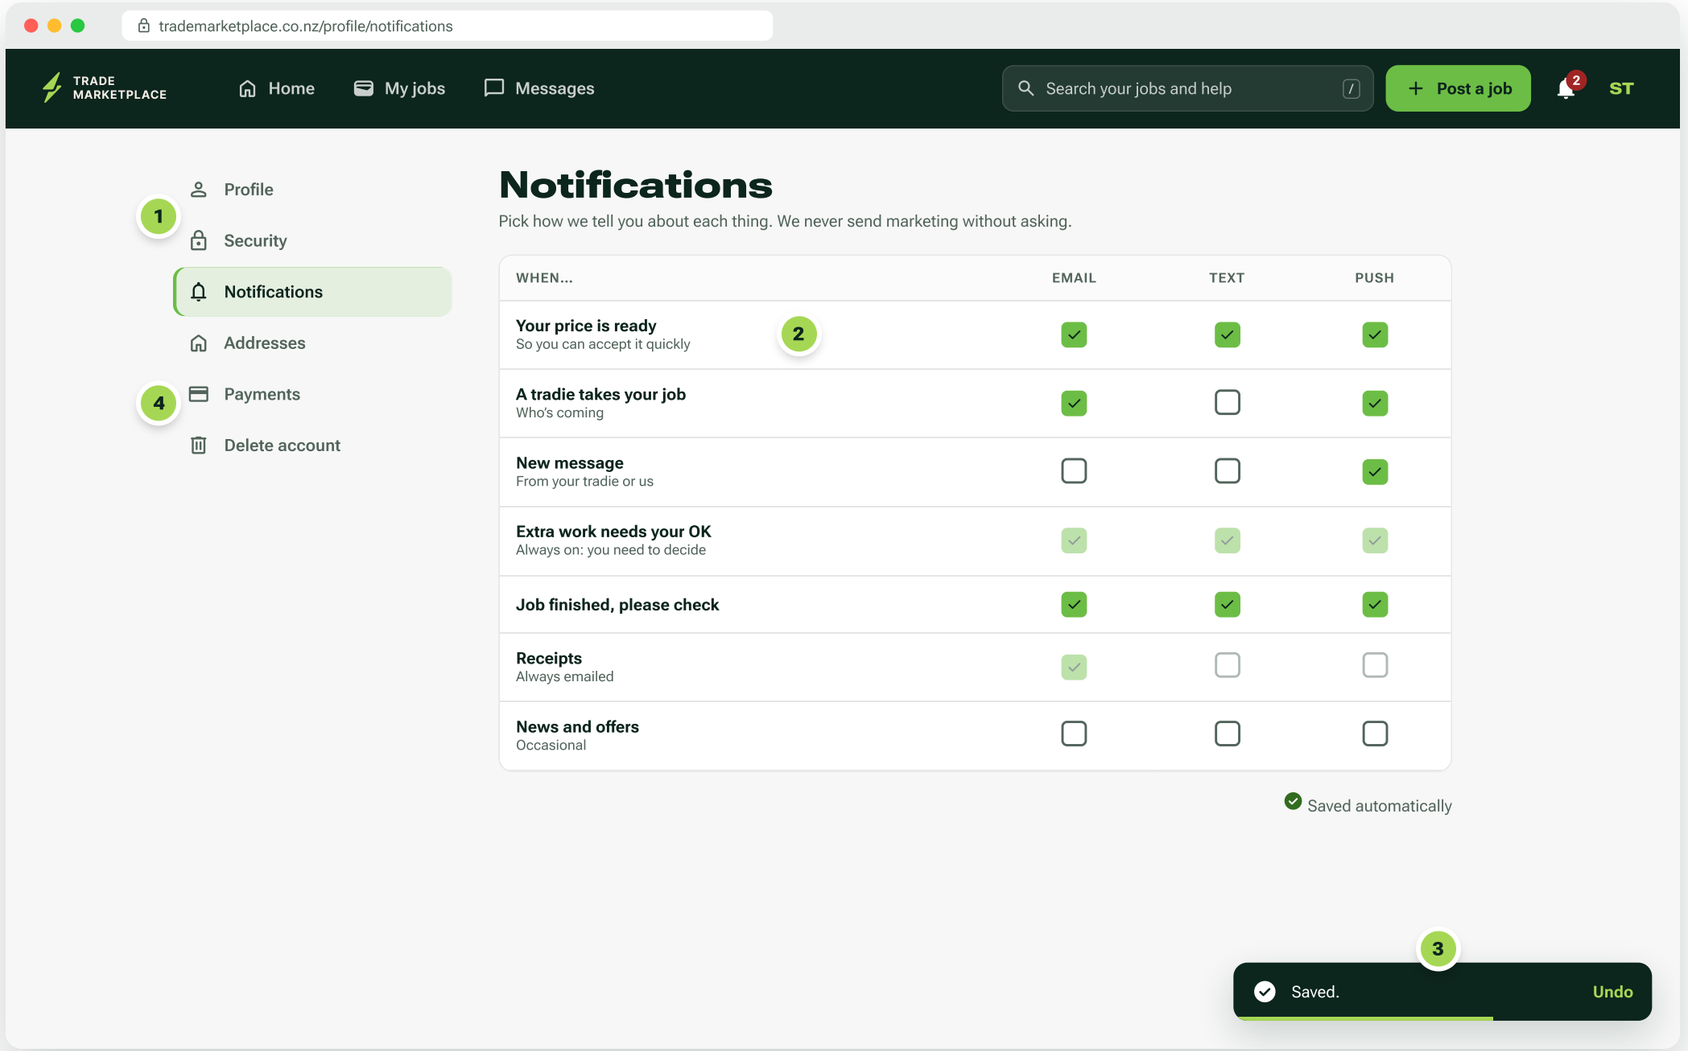
1. Bell → dropdown panel (400px), latest 8, unread tinted with a red dot. Opens with M08; badge pops when the count goes up (M20).
2. Each row deep-links to the exact job/thread/receipt and marks itself read.
3. Avatar → menu: Account, Payments, Notification settings, Help, Log out (Danger). Shown in a separate spot here so both are visible.
4. Tooltips on icon-only buttons after 500ms hover (shown on search). Tooltips also show keyboard shortcuts.

MOTION

`M08` Search suggestions
`M20` Badge pop

Inventory: `E02` · `E03` · `E09`

Account settings



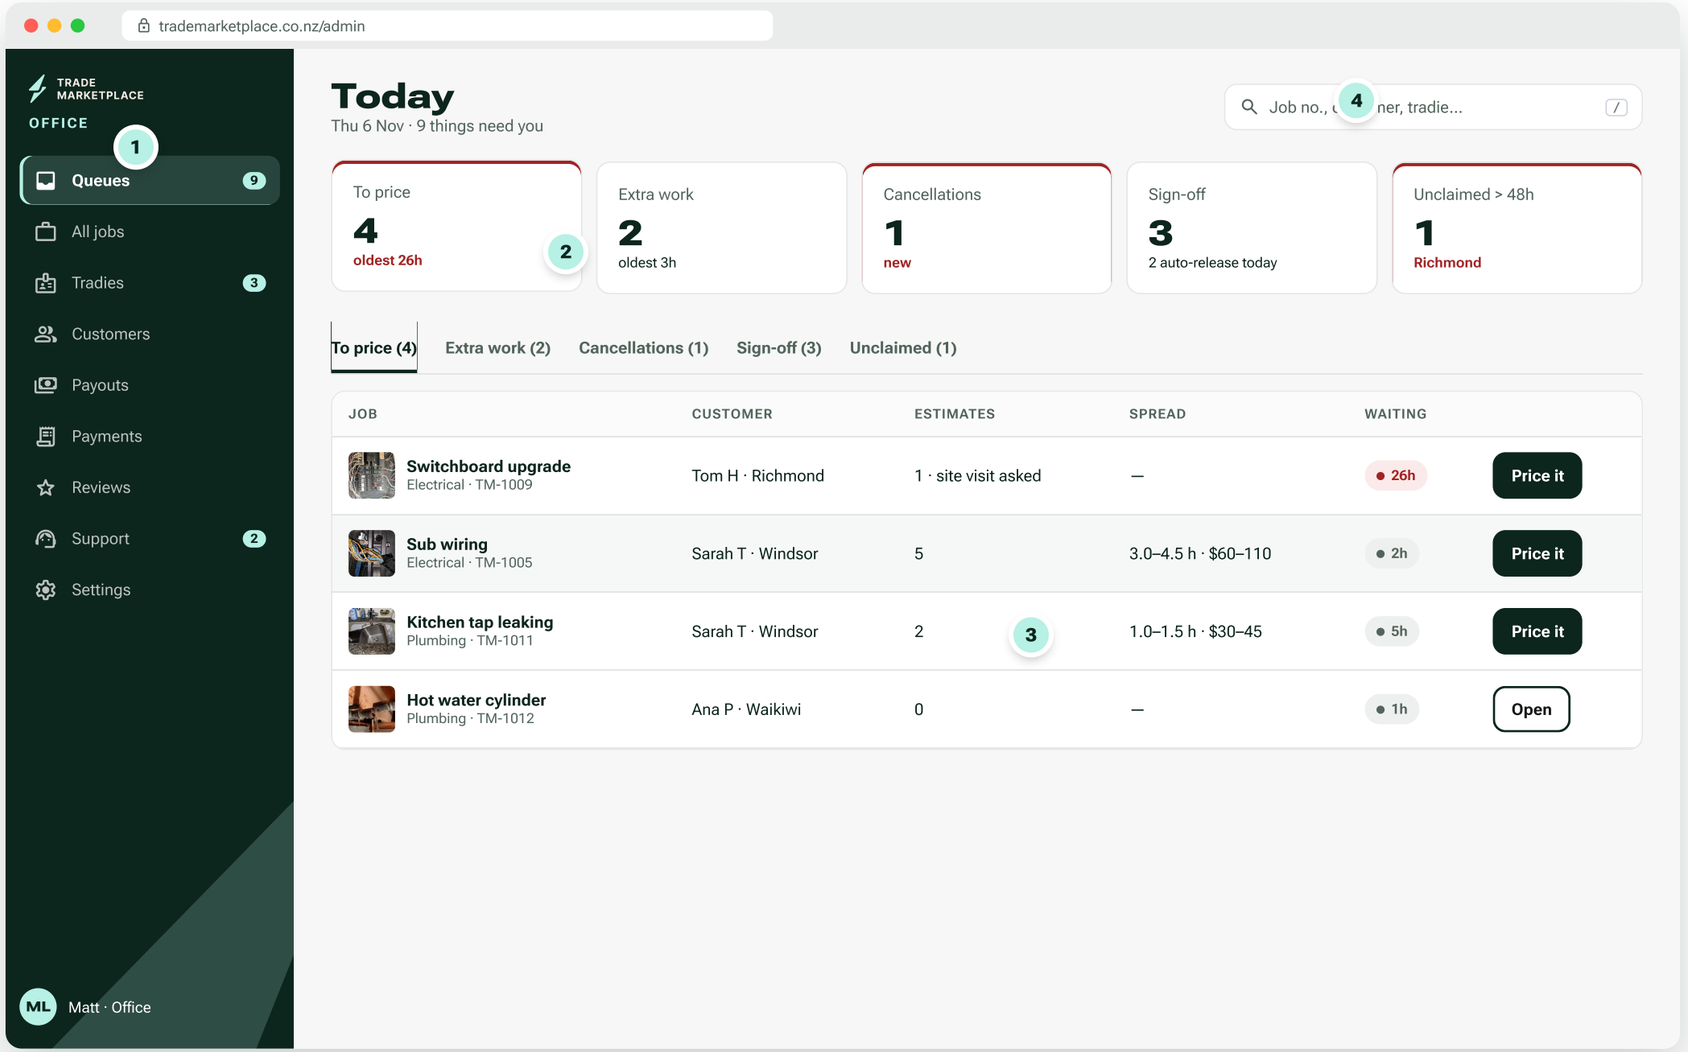
1. Settings layout shared by every account page: left nav (240), content max 820. Pages: Profile, Security (email, password, log out other devices), Notifications, Addresses, Payments, Delete account.
2. Notification matrix: event × channel. Must-have messages are locked on (dimmed tick + reason).
3. Toggles save straight away with an Undo toast (M14). Text-heavy forms (Profile) use an explicit Save button instead.
4. Delete account: explains what's kept (invoices, by law), blocked while a job is active, type DELETE to confirm.

MOTION

M14 Toast
M16 Tab underline

Inventory: **E04** · **E05** · **E06** · **E07**

Office · queues



1. Office mode: Forest sidebar with Mint, counts per section. Desktop-first; usable on a tablet; on a phone tables become cards.
2. KPI cards = queues; red top edge + red text when anything is overdue (e.g. > 24h). Click a card = open that tab. Numbers tick up on load (M17).
3. Each queue is a table, oldest/most urgent first, one action per row. Row hover tint.
4. Global search (/): job number, customer, tradie, email, phone.

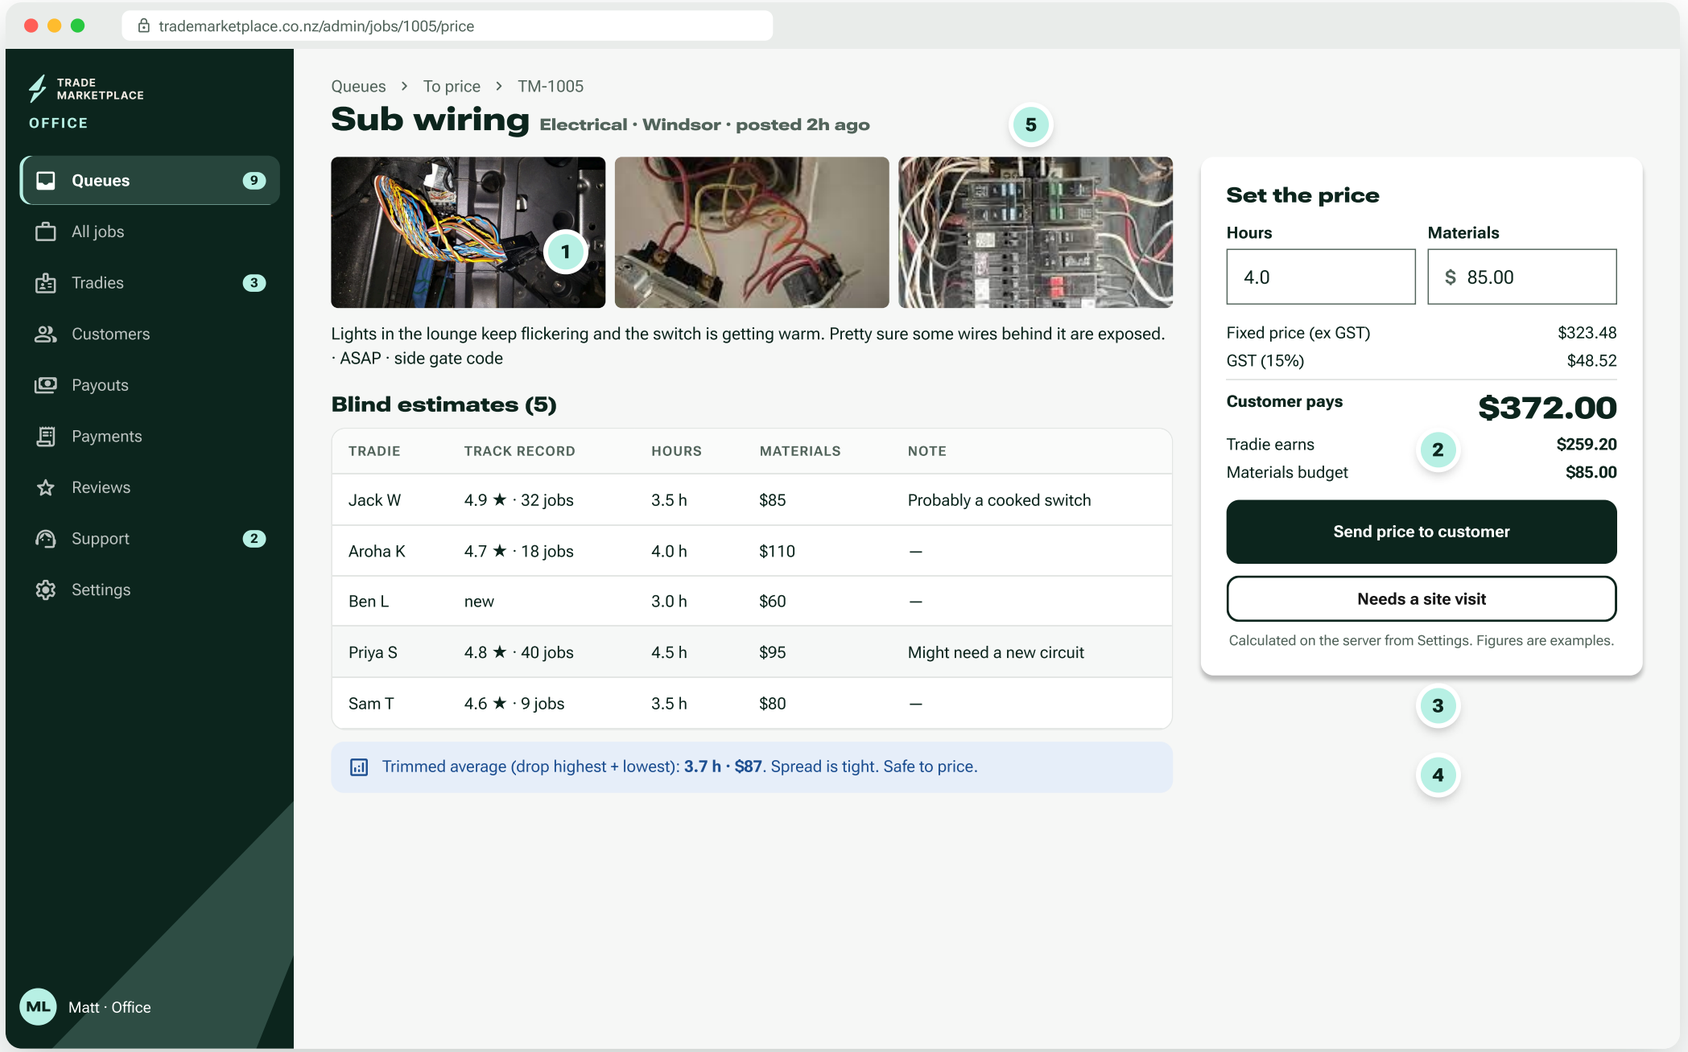
MOTION

M17 Number ticker
M16 Tab underline
M03 Hover lift

Inventory: **F01**

05 — OFFICE `/admin/jobs/[id]/price`

Office · price a job



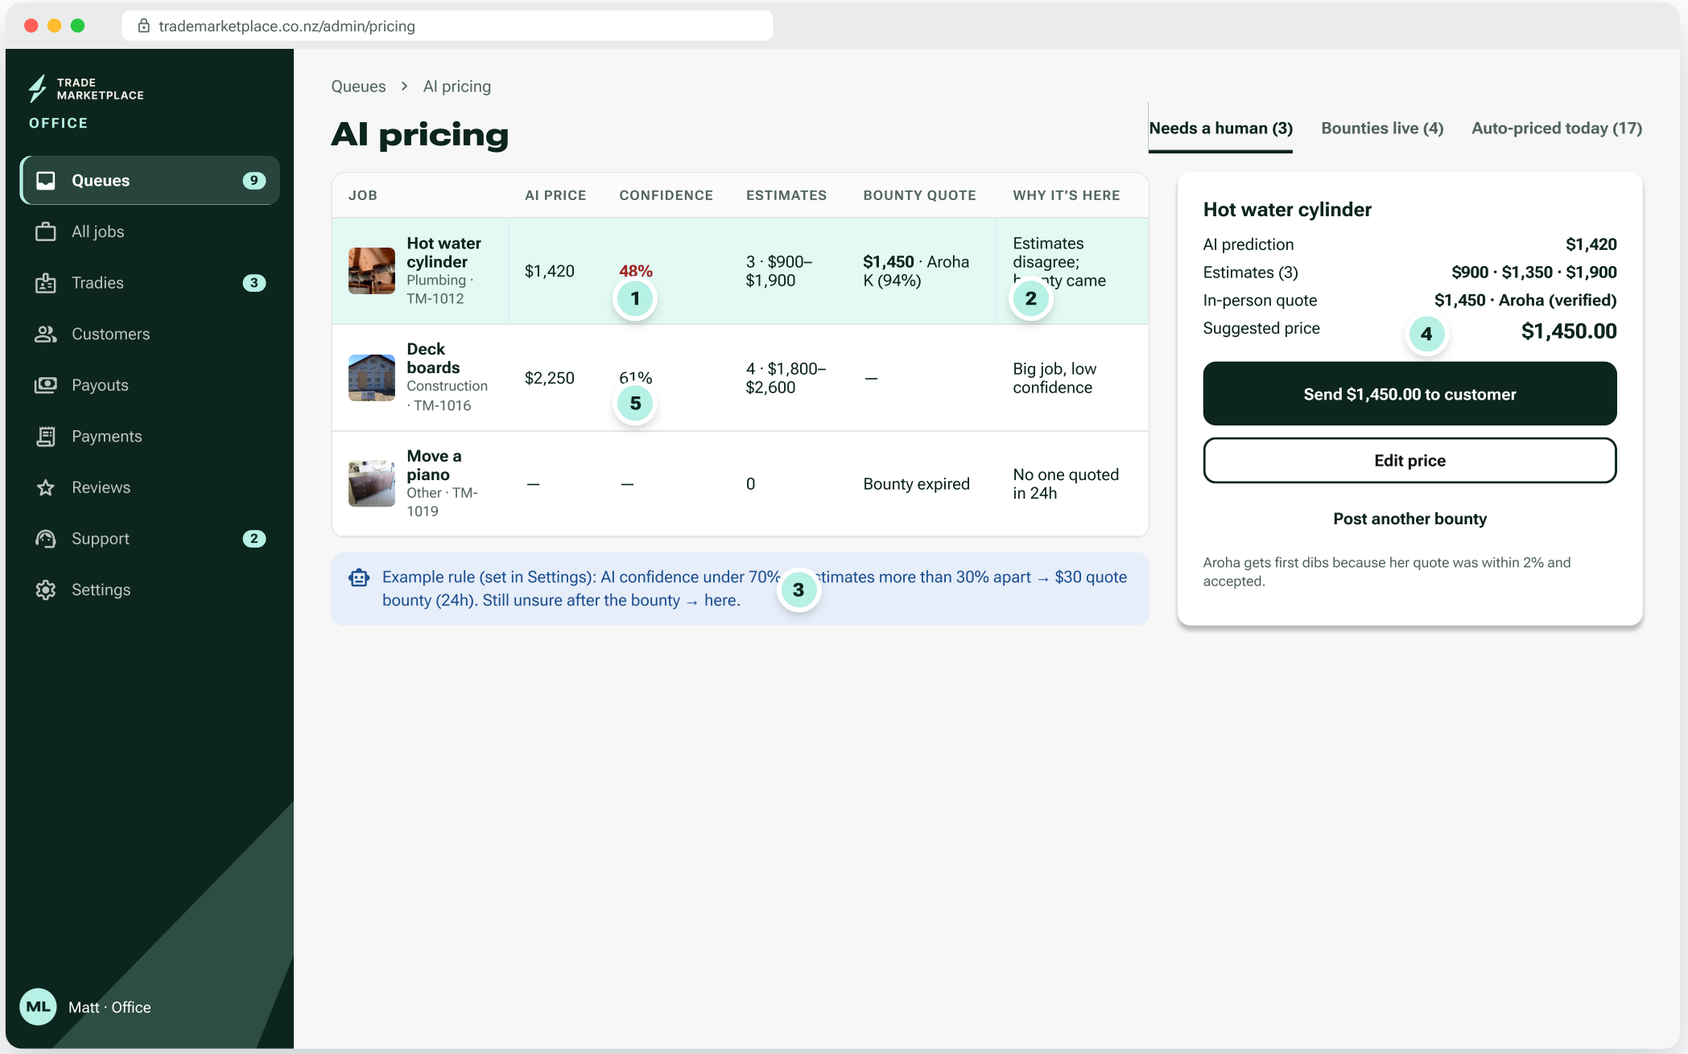
1. Pricing workspace: job + photos, blind estimates with each tradie's track record, suggested trimmed average.
2. Price builder: office enters hours/materials; the server returns the breakdown (customer pays, tradie earns, budget). UI never calculates.
3. "Send price to customer" → confirm dialog showing exactly what the customer will see → queue count drops (M17).
4. "Needs a site visit" sends the customer a message + books a paid visit (future).
5. Price extra work (F03) uses the same layout with the tradie's photos and request.

MOTION

M13 Dialog
M17 Number ticker

Inventory: **F02** · **F03**

Office · AI pricing review



1. The Trade Marketplace AI prices most jobs on its own ("Auto-priced today"). Only unsure ones reach a human.
2. Each row shows the AI price, its confidence, the spread of estimates, any in-person bounty quote, and why it's here.
3. The trigger rule is written down and editable in Settings (confidence and spread thresholds).
4. Detail panel: everything side by side, a suggested price, one-click send. Who gets first dibs is shown so the office can overrule it.
5. Expired bounties with no quote land here too (repost, raise the bounty, or price by hand).

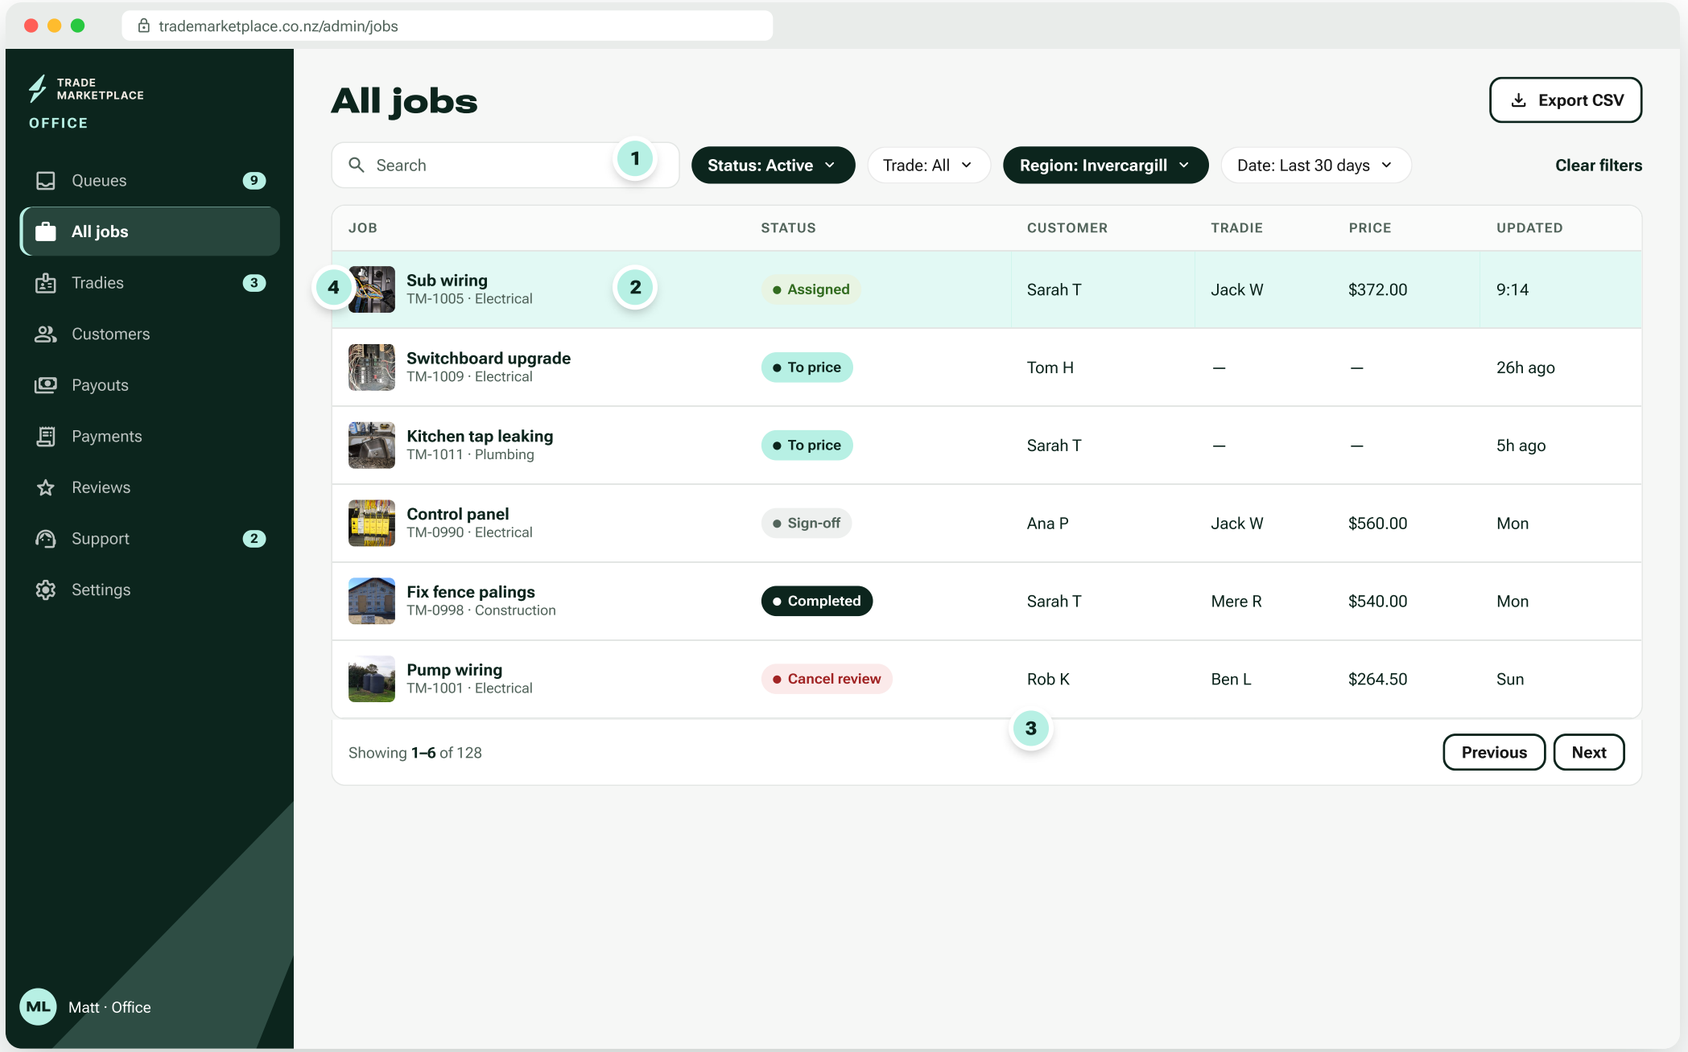
MOTION

M17 Number ticker
M13 Dialog

Inventory: **F15**

05 — OFFICE `/admin/jobs`

Office · all jobs



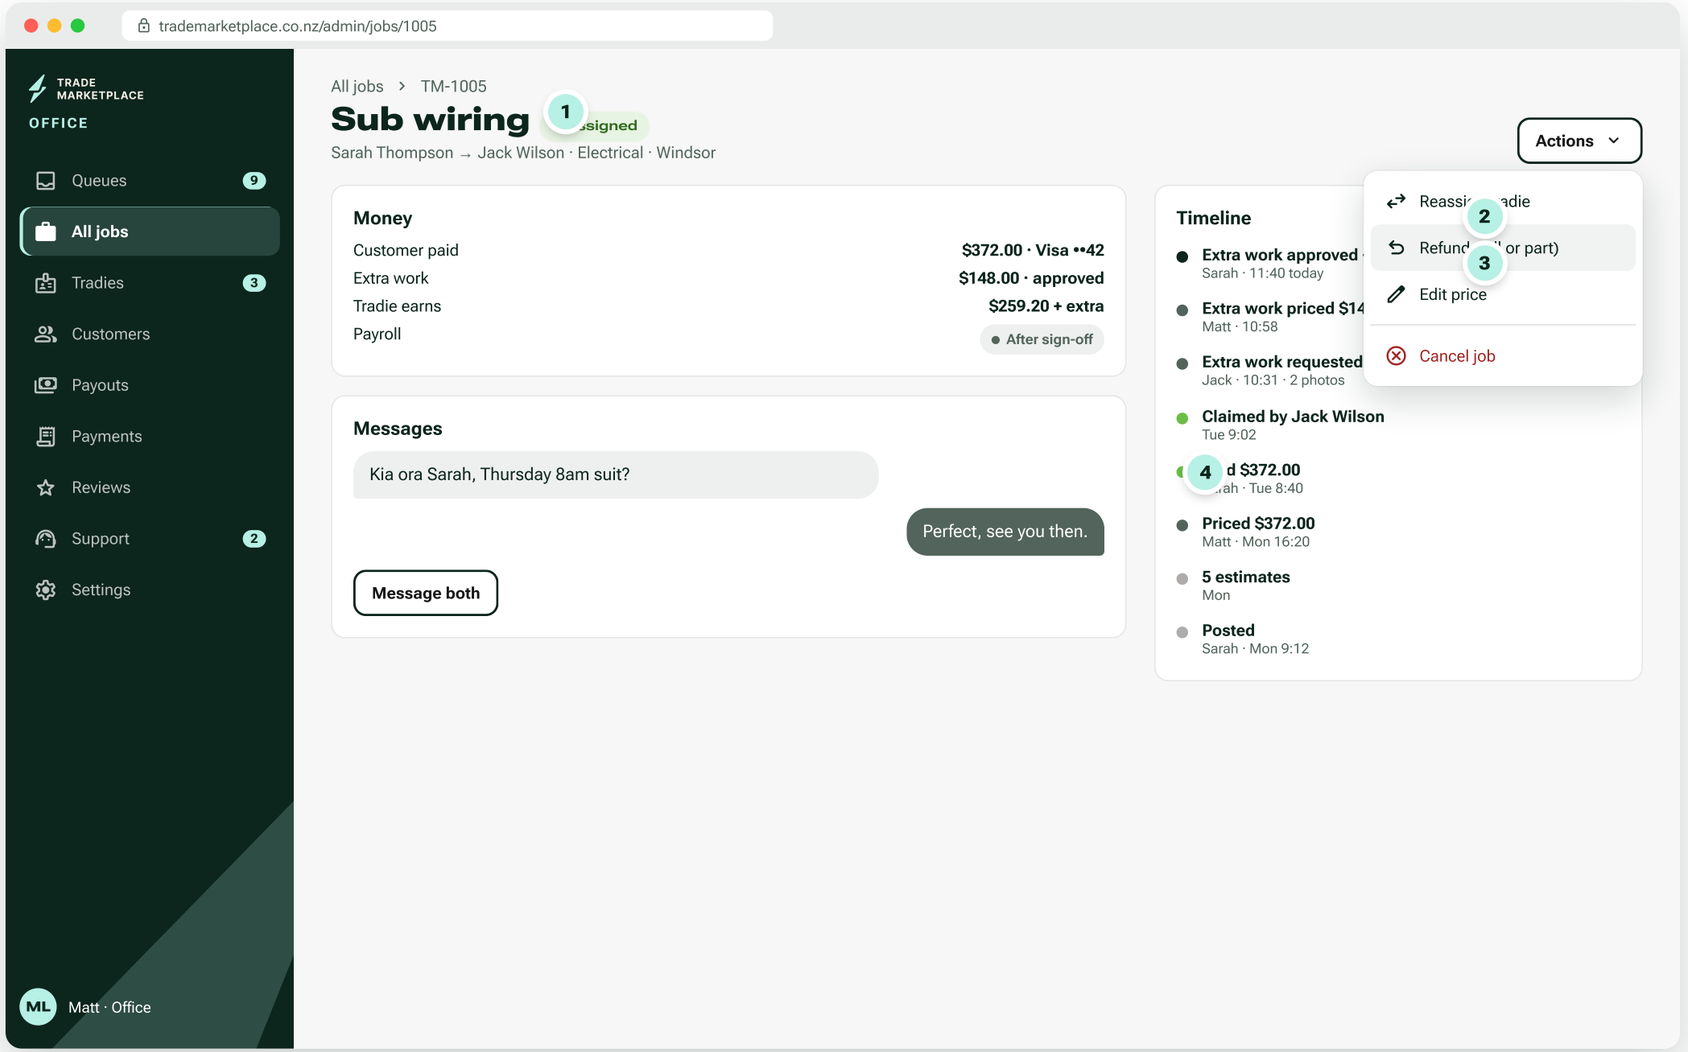
1. Every job, filterable (status, trade, region, date) and searchable. Filters are chips with dropdowns; state in the URL.
2. Office status labels (not customer words). Selected row tint shows the one open in the detail view.
3. Pagination 25 per page. Export CSV respects filters.
4. Click → Job admin view (F05).

MOTION

M15 Skeleton → content

Inventory: **F04**

Office · job admin view



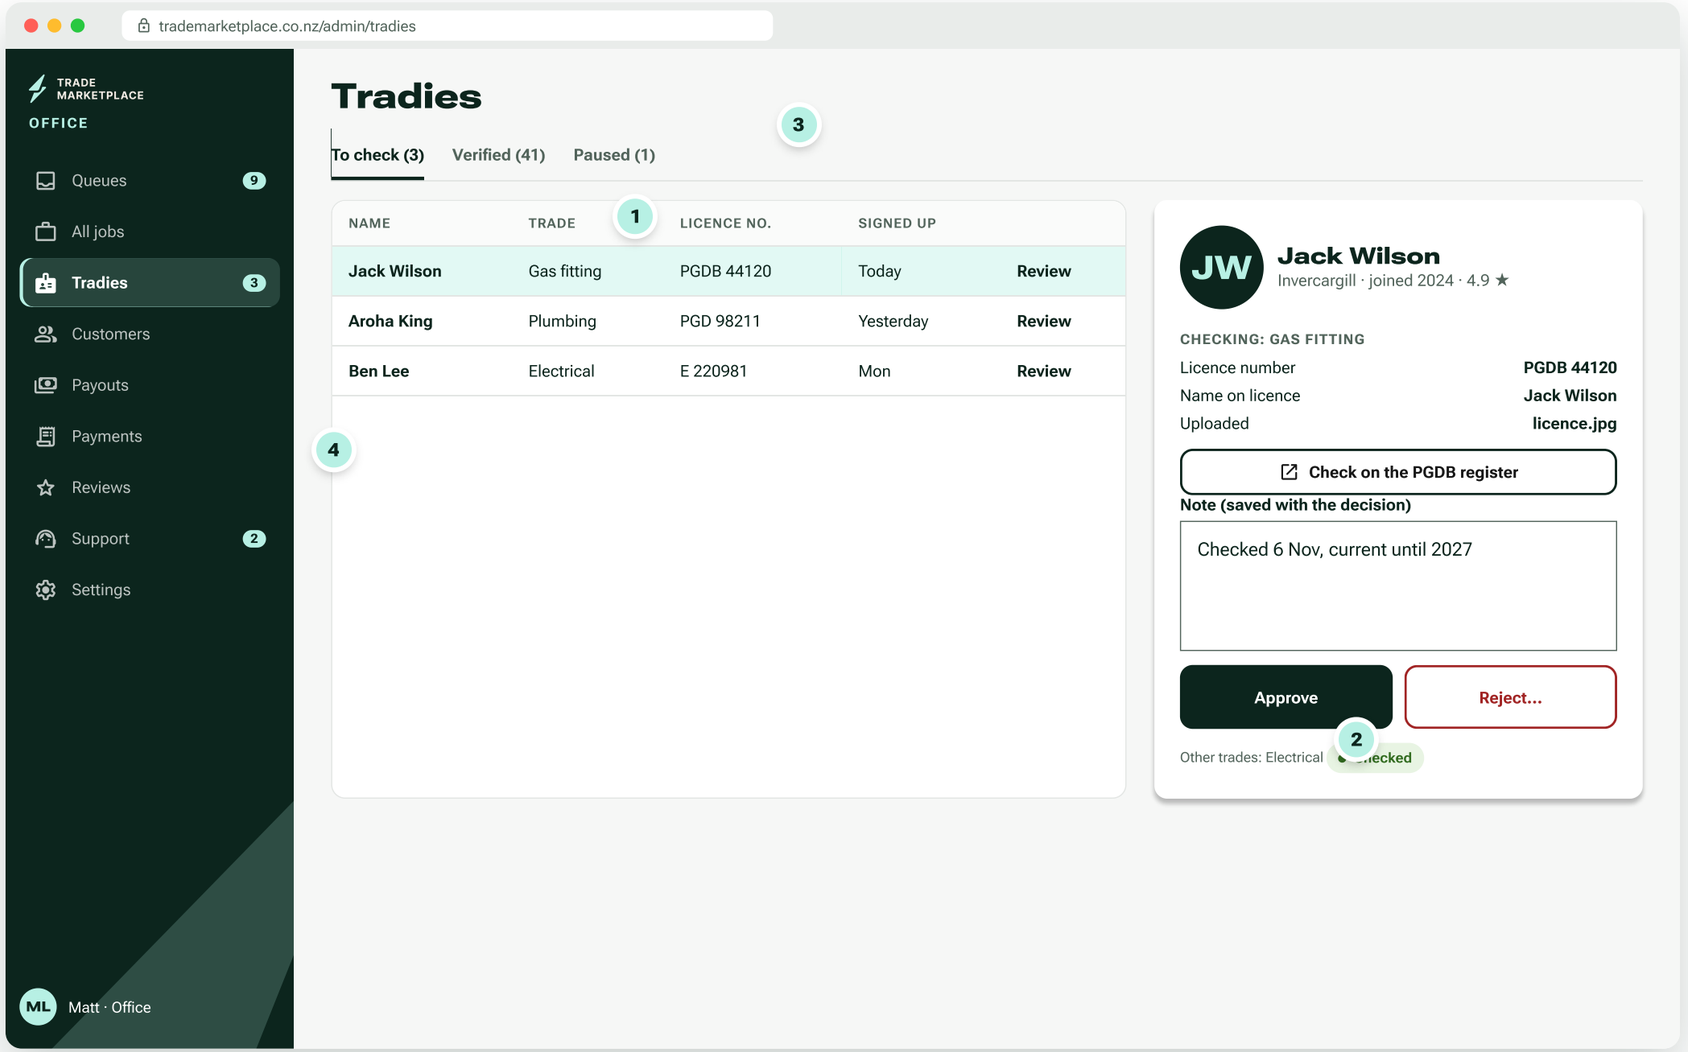
1. Everything about one job: money, messages (office can message both sides), full timeline (audit log: who did what, when).
2. Actions menu: reassign, refund, edit price, cancel. Each opens a confirm dialog with a required note (stored in the timeline).
3. Refund dialog asks full/partial + reason; shows it's a record until real payments are on.
4. Timeline newest first; colour dots by actor (customer, tradie, office, system).

MOTION

M13 Dialog
M01 Page enter

Inventory: **F05** · **F06** · **F07** · **F11**

Office · tradies



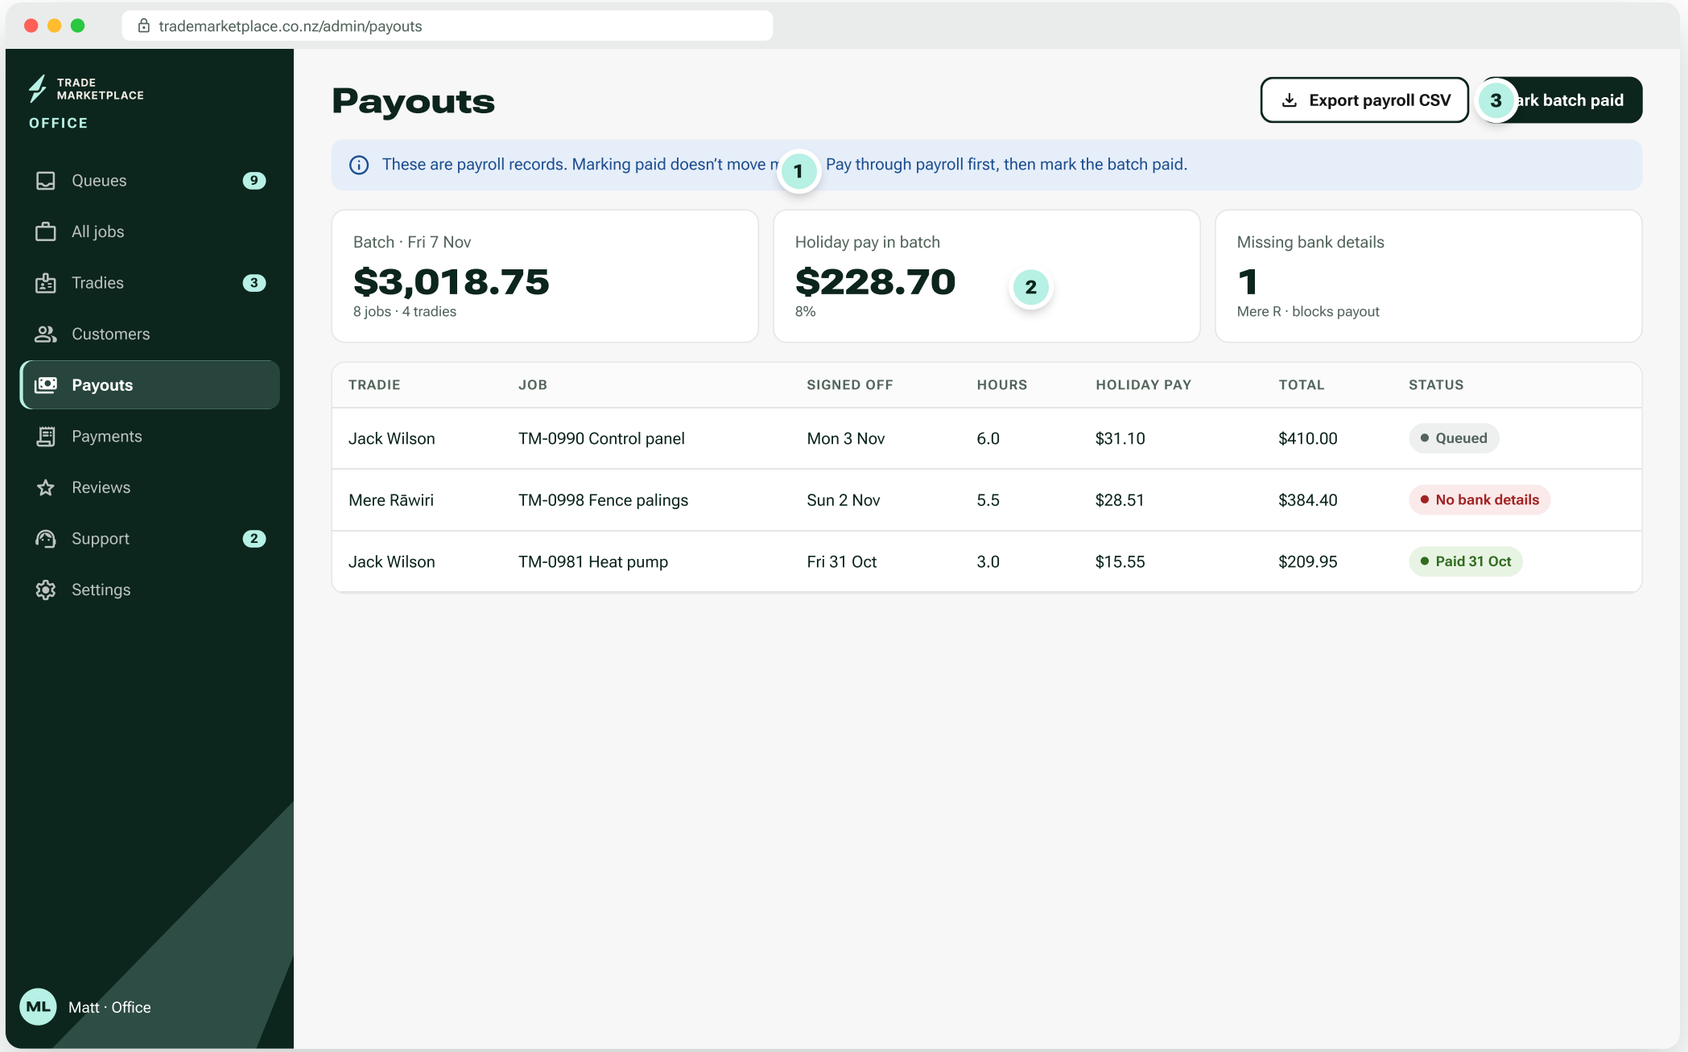
1. Per-trade checks: each trade a person claims is reviewed separately, with its own register link.
2. Decision needs a note; rejection needs a reason the tradie will see. Both go to the audit timeline.
3. Verified tab: search, expiry dates (sort by expiring soon), pause/un-pause with reason.
4. Customers (F09) uses the same table + detail-panel pattern.

MOTION

M13 Dialog
M14 Toast

Inventory: **F08** · **F09** · **F12**

Office · payouts



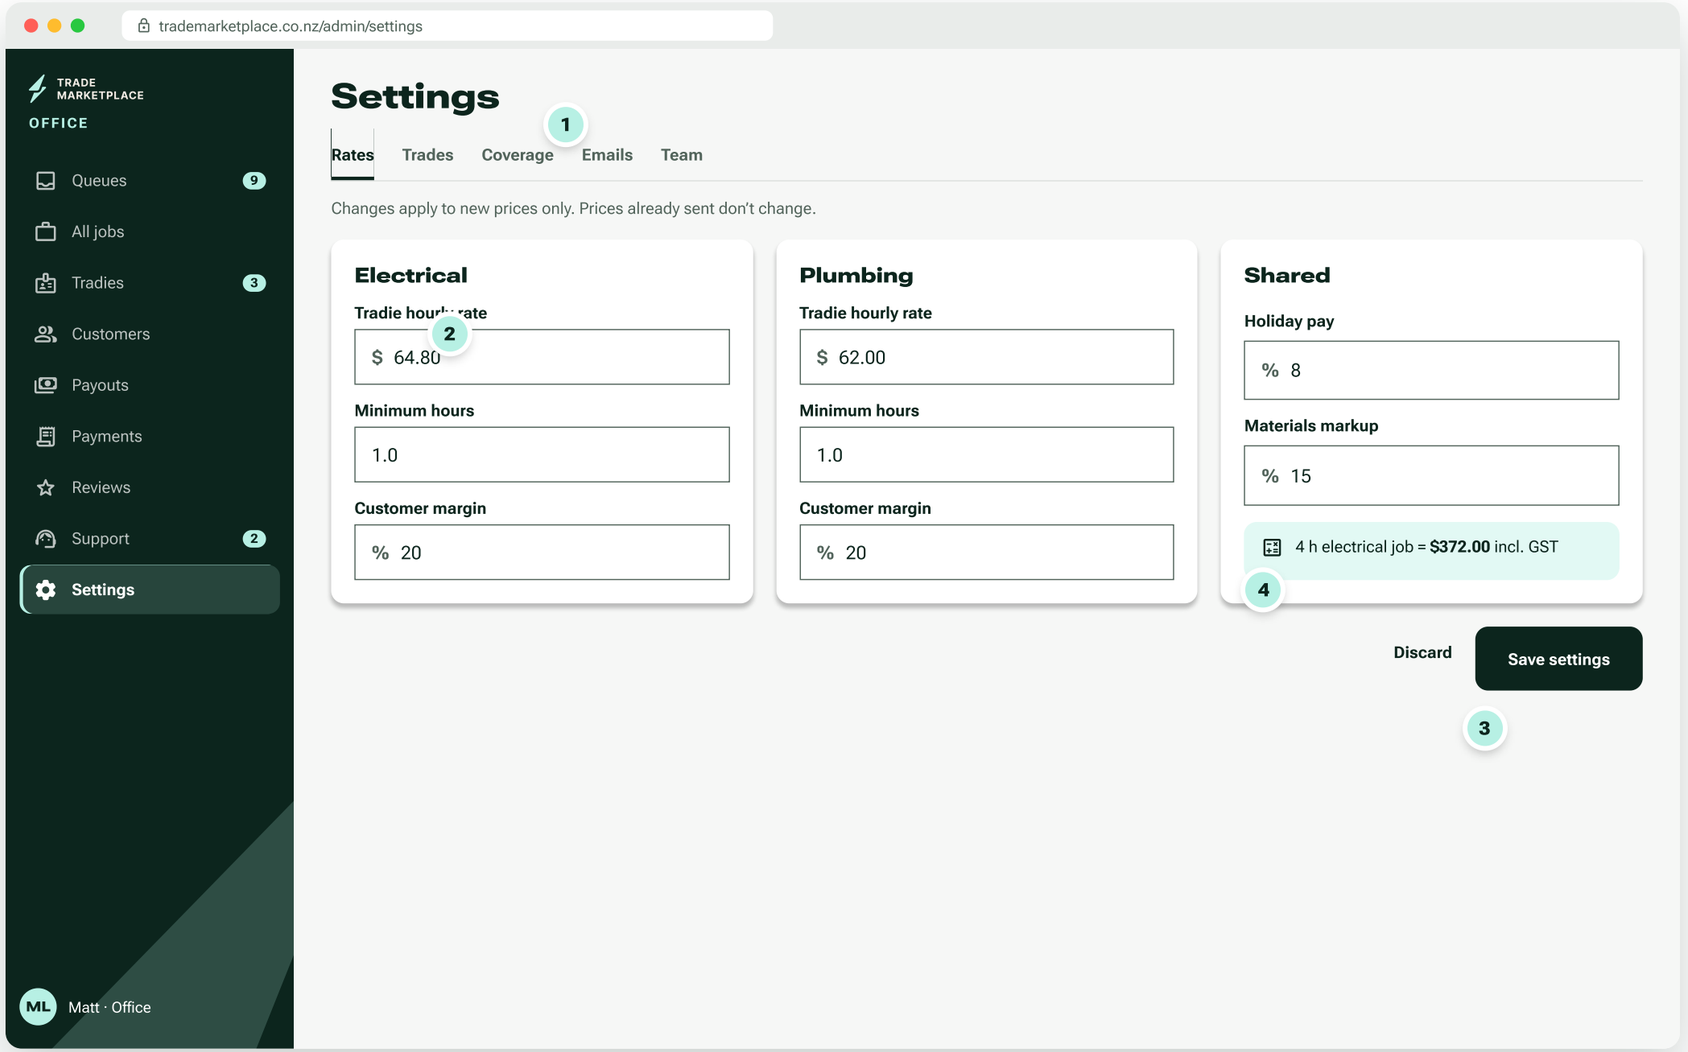
1. Existing payroll export + reconciliation, restyled. Honest banner: records, not transfers.
2. KPIs for the current batch + blockers (missing bank details).
3. "Mark batch paid" → confirm dialog naming the total and count.

MOTION

M17 Number ticker
M13 Dialog

Inventory: **F10**

Office · settings



1. Tabs: Rates (per trade), Trades (switch trades on/off, licence + evidence rules), Coverage (live suburbs → waitlist), Emails (edit templates), Team (office users, roles).
2. Per-trade rate cards (new: today there's one shared rate). Live example price from the server.
3. Save shows a confirm listing what changed; changes logged with who/when.
4. Figures are placeholders: use the real settings.

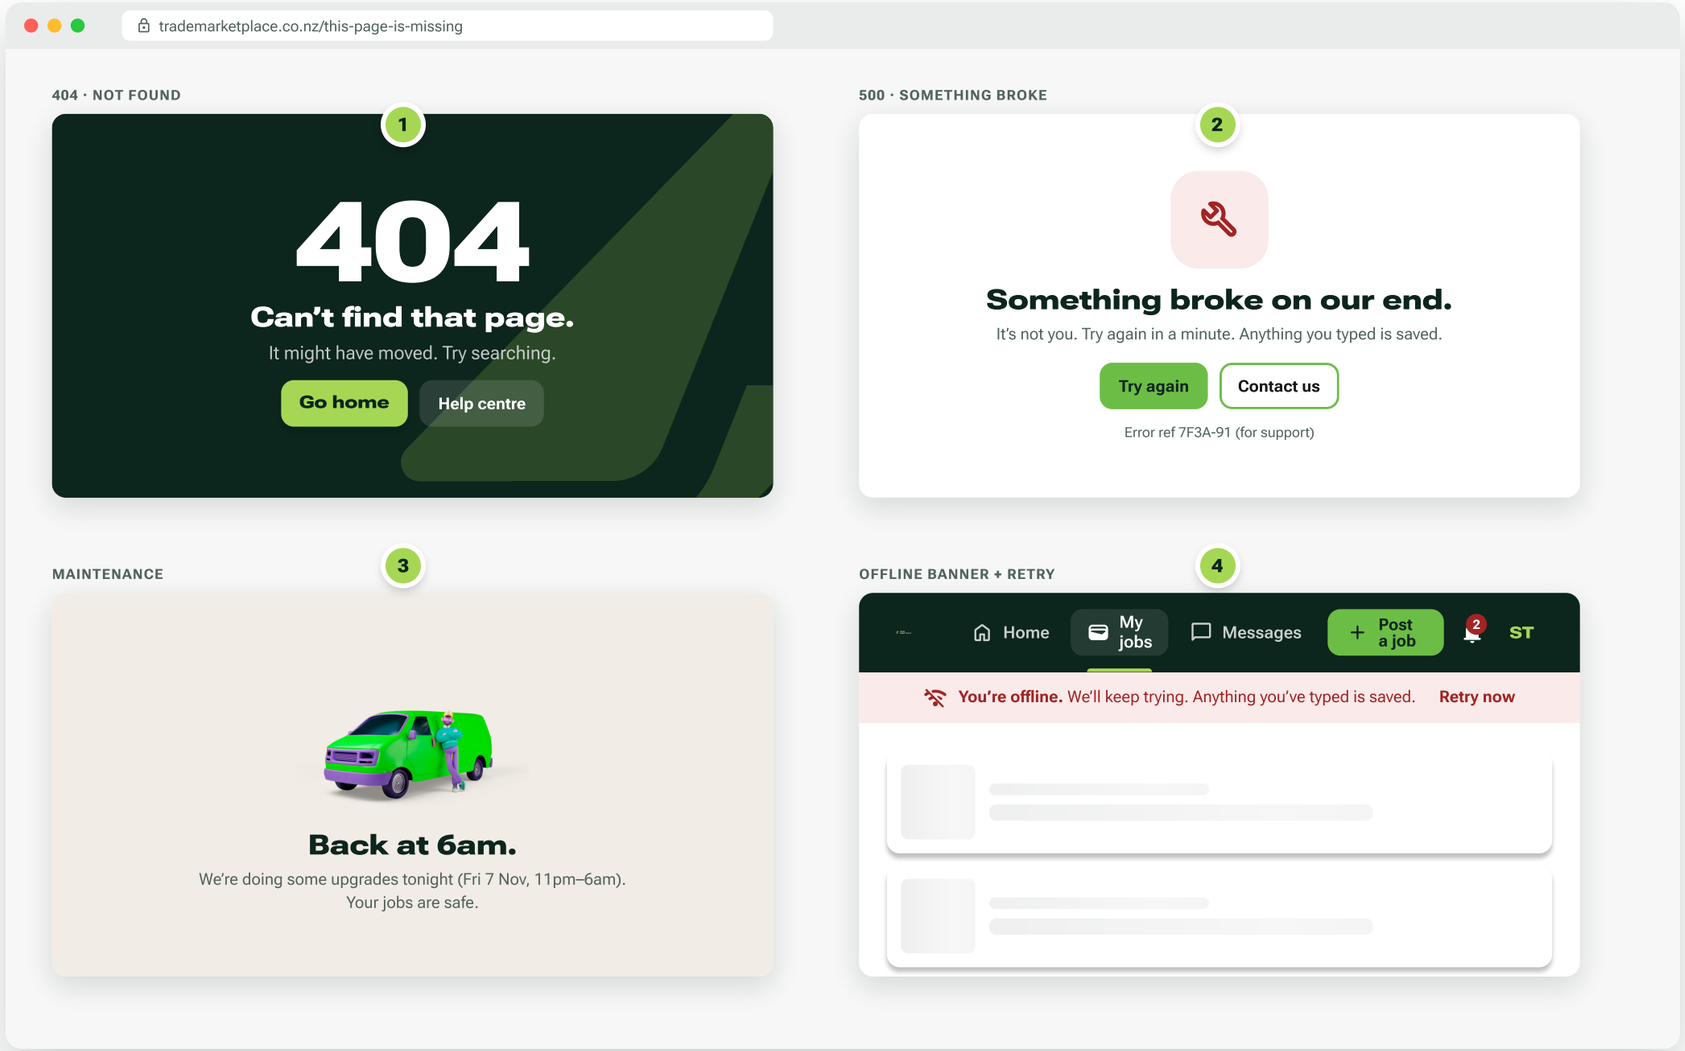
MOTION

M16 Tab underline
M13 Dialog

Inventory: **F14**

05 — SYSTEM (any)

404 · 500 · maintenance · offline



1. 404: Forest, big Lime "404", plain words, Go home + Help. Also used for jobs you can't see (never reveal they exist).
2. 500: our fault, say so. Show an error reference for support; log the details. Drafts are kept.
3. Maintenance: scheduled downtime page with the exact window. A banner warns 24h before.
4. Offline: persistent top banner, skeletons stay, actions queue or disable with a reason. Auto-retry with backoff.

Jack found extra work (+$148). Needs your OK: tmkt.nz/j/1005

Trade Marketplace
New job 3.6 km away. You earn $259.20. tmkt.nz/w/1005

Trade Marketplace
Your code is 482 913. Don't share it.

1. One email template: Cream background, white card, Forest header with logo + small bolt, one heading, short body, one hero button, footer with settings link. Built as HTML email (table layout), with plain-text versions.
2. Customer emails use Lime buttons; tradie emails Amber. Same voice as the app. One job per email.
3. Full list to build: welcome, verify, password reset, price ready, receipt, tradie confirmed, new message (digest), extra work, please check, review request, cancellation outcome; tradie: new job near you, estimate request, claimed, sign-off, paid, licence checked/rejected/expiring.
4. Texts: under 160 characters, short link, sender "TradeMkt". Push: same text, deep link.
5. Test in Gmail, Outlook, Apple Mail, light + dark mode.

Icons, share images & install

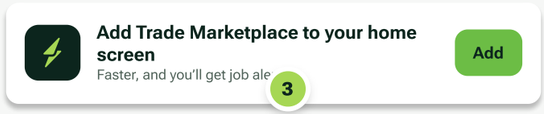
trademarketplace.co.nz

FAVICON & APP ICONS

BROWSER TAB

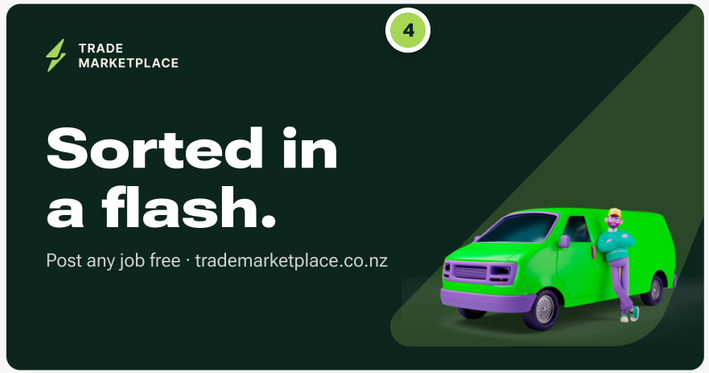
Titles: "[Page] · [Job] | Trade Marketplace". Unread count in the title: "(2) Messages | Trade Marketplace".

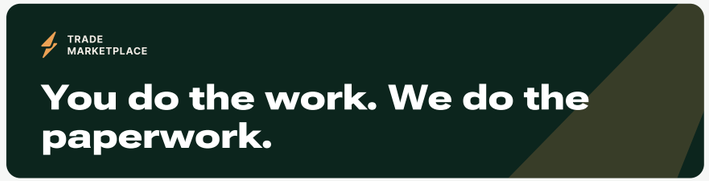
INSTALL AS AN APP (PWA)



Manifest: name, short_name "TradeMkt", theme #0C251D, background #F1ECE5, standalone. Offer once, after a second visit; tradies after their first claim.

SOCIAL SHARE IMAGE (1200 × 630)





One OG image per page type (home, for tradies, service pages auto-generated with the trade name). Job pages are private: no OG image, noindex.

1. Favicon = bolt mark on Forest (SVG + 32px PNG), apple-touch-icon 180, PWA icons 192/512 with a maskable version.
2. Page titles follow one pattern; unread count shows in the tab title.
3. Install prompt: our own card, offered once at a good moment (never on first load).
4. Share images per page type, in both modes. Private pages (jobs, account, office) are noindex with no share image.

Inventory: **G07** · **G08**

Decided (23 Oct 2026)

Matt's calls on the open questions. These override anything older in this spec or the first guide. Business rules that need backend work (new statuses, AI pricing, crews, quoters) get their own tasks.

1 Who can take jobs
Anyone can take Other jobs and unrestricted work. Checks are loose at the start; checked workers get a verified badge. Restricted work (electrical, plumbing, gasfitting, drainlaying, restricted building work) still needs a licence on file before claiming.

2 Quote bounties
When the Trade Marketplace AI can't settle a price from photos + estimates, a $30 quote bounty appears (gold on the map, 24h). Anyone good can claim it, visit in a customer window, and send a fixed price. The AI checks it against the estimates and its own prediction.

3 Who pays the $30
The customer books a $30 quick look; it comes off the final price if they go ahead.

4 First dibs
The quoter gets first dibs only if their price is accepted and the AI deems it fair. Way-off quotes are ignored and the job opens to everyone.

5 Team jobs
One lead per job. The lead sets each person's split and invites crew (accept/decline). Everyone is paid their share through payroll. The customer only sees the lead. Later: request a specialist inside a job.

6 Verified quoters
Invite only, tougher screening. Earn $30 per quote + 2% of jobs where their price is accepted, fair and the job finishes without a dispute + a weekly bonus for accurate quotes.

7 Payments
Stripe, with Apple Pay. Real payments switch on last, after lots of testing.

8 Map
Mapbox for now.

9 Rates
One shared rate + an Other rate at launch; per-trade rates possible later (configurable in Settings).

10 Scheduling
Customers give time windows; workers book one. Preset updates (on my way, running late, reschedule) instead of chat where possible.

11 Phone numbers
Hidden until a job is claimed, then both sides can see them.

12 Launch area
Invercargill.

06 — BUILD & CHECK

Easy to forget

Not pages, but users notice when they're missing. Each one belongs on the launch checklist.

Analytics events
post_started, job_posted, price_viewed, price_accepted, price_declined, paid, claimed, claim_lost, estimate_sent, variation_approved/declined, signed_off, review_posted. No personal data in events.

SEO basics
Titles + descriptions per public page, service/location pages indexable, app pages noindex, sitemap.xml, robots.txt, structured data (LocalBusiness, FAQ).

Performance
LCP < 2.5s on 4G, CLS < 0.1, INP < 200ms. Images lazy + sized. Landing hero image preloaded.

Keyboard shortcuts
/ search · Esc close · Enter submit · ←/→ gallery · ↑/↓ steppers. Shown in tooltips.

Time & money
Pacific/Auckland timezone, en-NZ formats, NZD, GST shown on every price.

Error tracking & uptime
Front-end errors reported with the error ref shown to users (500 page). Status page link in the footer.

Browser support
Last 2 versions of Chrome, Safari, Edge, Firefox; iOS Safari 16+; Android Chrome. No IE.

Cookie consent
Analytics only after consent (A16). Essential cookies only otherwise.

Print
Receipts, invoices and office job pages print clean (no nav, white, A4).

Empty, loading, error
Every list and page from the inventory has all three designed (skeletons, not spinners).

06 — BUILD & CHECK

Done means done

Use this for every page in the inventory. Then decide the open questions, because several pages depend on them.

A page is done when...

- [ ] Matches its mockup here at 1440 and its v1 mobile screen at 390
- [ ] Works at 320 / 390 / 768 / 1024 / 1440 with no sideways scroll
- [ ] Every state from the inventory is built (loading, empty, error, success)
- [ ] Hover, focus, pressed and disabled states as on the Effects page
- [ ] Motion uses the named animations; reduced motion turns them off
- [ ] Keyboard-only run-through works; axe shows no violations
- [ ] Copy matches the voice rules; numbers come from the server
- [ ] Tokens + kit components only: no hex, no one-off styles
- [ ] lint · typecheck · test · build all green; screenshots in the PR

Still to decide

1. Email/SMS provider and sender names
2. Legal check: restricted work rules + platform liability (lawyer)
3. AI pricing thresholds and what counts as a “fair” quote
4. What the 2% is a share of (labour, or the whole job?) and the weekly bonus amount
5. What happens when a bounty expires or the customer says no to the $30 look
6. Who builds the AI pricing model, and when
